

Box-style Camera Application Example Live Music Venue

Panasonic

As of December 2025

The flexibility of the box-style camera's installation capability allows for creative image creation.

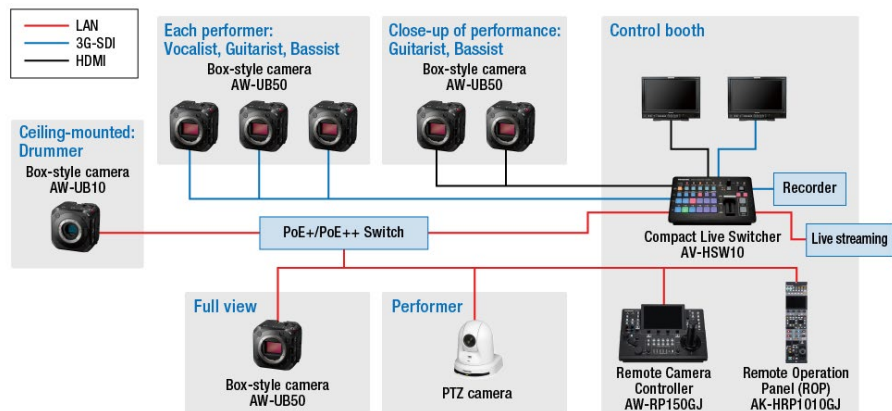

Production and Effects

Since each performer rarely moves a great deal in a live music concert, a fixed-point box-style camera can be used to capture each performer.

The overall quality of the video is also enhanced by the extensive use of box-style cameras. Scenes in which the standing position is moved, such as in a guitar solo, are tracked by the remote camera.

In addition, the box-style camera's flexible installation capability allows for more creative image creation by attaching it to a microphone stand or amplifier, or by aiming for an overhead view from the ceiling.
