Major Features of the VariCam Series

Super 35 mm Native 4K Sensor
All models in the Cinema VariCam Series are equipped with the super 35 mm sensor. This sensor won The Hollywood Post Alliance Engineering Excellence Award 2015.

Wide Latitude “V-Log” Gamma
All models in the series also offer the dynamic range of 14+ stops on “V-Log” gamma. This wide dynamic range assures accurate image rendering, particularly from the critical shadow to highlight areas. Transition into highlights is remarkable for its highly natural roll-off.

Natural “V-Gamut” Color Space
The color separation filter is optimized to achieve the Cinematic VariCam look. It offers natural color and accurate color linearity. The new “V-Gamut” color space encompasses the entire BT. 2020 color space. “V-Log” with “V-Gamut” has sufficient latitude and color space for HDR. Grading output is available for post production.

Dual Native ISO
The image sensor has two native ISO settings: 800 and 5000. This allows the camera to achieve much higher sensitivity without increased noise before gain processing. It captures images with very low light or natural light, reduces the amount of additional lighting required, and may extend the “Magic Hour.”

In-Camera Color Grading
A built-in LUT box lets you make color decisions on-set with 3rd party applications. Grading information, such as 3D LUT files and CDL files, allows you to provide the same images you create on-set to post-production with easy management.

4K Master and HD Graded Simultaneous Recording
In addition to main recording up to 4K, you can record one more version up to 2K. This enables an ungraded 4K master recording with V-Log, simultaneous with an HD graded recording. You can use the HD graded recording for immediate viewing or off-line editing. Dailies that had been created after shooting can now be produced on-set and with only the camera.

Multi-Codec 4K/UHD/2K/HD Recording
- V-RAW: VariCam Pure supports uncompressed 4K resolution RAW recording with a frame rate of up to 120 fps. VariCam LT can output uncompressed RAW from SDI output terminals.
- AVC-ULTRA: VariCam 35 supports AVC-Intra 4K. It offers high picture quality and a manageable file size.
- Apple ProRes*: ProRes (2K/HD) is the industry standard codec.
  * ProRes is licensed from Apple Inc.

Large-Diameter OLED Viewfinder
Newly developed 1080p OLED panel shows very clear & accurate image, no lag, low latency, very sharp, accurate color. Wide field angle with viewfinder magnification of 0.78x and large-diameter 38 mm eyepiece lens offers comfortable viewing with minimum vignetting. Optical zoom adjusts image size to personal preference. This viewfinder assists you to expose properly with the Y-Get (spot meter), waveform, false color and zebra. It is capable of 2x, 3x and 4x expand focus.

Separate Operation with Extension Module
VariCam Pure, VariCam 35 and VariCam HS have a modular design. The camera module and recording module can be positioned at separate locations and connected with the AU-VEXT1G Extension Module. This lets you mount only the camera head to a crane, thus adding flexibility to your camera work.

Remote Control App “VariCam ROP”
The VariCam ROP app for iPad/iPhone is available free of charge from the Apple App Store. It enables wireless remote control of the VariCam Series.
  * For wireless LAN connection with the camera, the AJ-WM50 or AJ-WM30 Wireless Module must be purchased separately.

Incredibly Fast Offload — expressP2 x Thunderbolt™ 3
The expressP2 card B series has a data offload speed of 10 Gbps. The AU-XPD3 expressP2 Drive, equipped with Thunderbolt™ 3 interface, brings out the best of the expressP2 card B series.

  * Leica is a registered trademark of Leica Microsystems IR GmbH.
  * DICOMAR is a registered trademark of Leica AG.
  * LEICA DICOMAR products are manufactured using Leica-certified measuring instruments and quality assurance systems based on rigorous quality standards approved by Leica Camera AG.
• Wide Angle Zoom: Its enable wide-angle and minimal-distortion shooting without the use of a conversion lens and allows shooting in a vehicle or room. The AG-UX180 achieves 24 mm*1 wide-angle and 20x zoom ratio.

High Quality 4K Image Sensor

The AG-DVX200 features a 4/3-type, large format MOS sensor. It creates highly attractive Bokeh effects by blending 4K resolution with shallow depth of field. The AG-UX180/UX90 feature a 1.0-type MOS sensor provides an appropriate depth of field and excellent balance between image quality and sensitivity.

i.Zoom in Super-High Resolution

In FHD shooting modes, the i.Zoom function increases the zooming capability while maintaining high resolution.

Digital Zoom (2x, 5x or 10x)

Using the optical zoom and i.Zoom*2 (in FHD) together, it gives you super telephoto magnification without dropping in light intensity.

Advanced Optical Image Stabilizer (O.I.S.)

The correction area has been expanded to the conventional model. This provides powerful correction even in unstable shooting situations. The ball OIS system reduces wear on the drive section, and greatly improves correction for small amplitude hand-shake.

Five-Axis Hybrid Image Stabilizer [in FHD]

In HD shooting modes, by using hand-shake correction that combines the effects of both optical and electronic image stabilization, hand-shake in various directions, including the rotary direction, is detected and corrected.

Manual Three Rings

All models feature manual three rings for Zoom, Focus and Iris control. Precise operation is possible by this function.

High-Speed AF, Various Picture Adjustment

High-Speed, High-Precision Intelligent Auto Focus

The Micro Drive Focus unit achieves high focusing speed, tracking performance and stability in 4K.

Custom AF Function

Auto focus operation can be customised by adjusting the AF Speed, AF Sensitivity and AF Area Width. This function enables the AF to operate exactly as intended by the user in accordance with the subject type or application.

Focus Assist

- iPad Remote Control: The AG ROP app for iPad is available free of charge from the Apple App Store. It enables wireless remote control of Panasonic 4K cameras with installation of a wireless module (optional AJ-WM50 or AJ-WM30).

1: Equivalent to 35 mm, in 4K 24p (17:9 aspect ratio). 25.4 mm in UHD/FHD (16:9 aspect ratio). *2: The higher the magnification, the greater the image quality degradation. *3: The part to be expanded is designated by touching the screen. *4: Not operable in combination with VFR or wired remote controller. *5: When the IIR REC is ON, iris, gain, and shutter speed are automatically adjusted. *6: Selective mode differs by product. *7: Recording can continue across multiple SD Memory Cards. However, each time the file reaches 96 GB, it will be split into two files, but the recording continues. If the Relay recording time reaches 10 hours, shooting will temporarily stop, and then automatically restart a few seconds later.
*8: iOS 7.1, iOS 8.1, and iOS 9 are supported.

Conceptual Chart of AF Tracking

By moving the Micro Drive Focus Unit minutely and quickly, highly precise AF performance is also achieved when shooting in 4K or shooting with a shallow depth of field.

The Micro Drive Focus achieves highly precise AF performance (AG-DVX200/UX180/UX90)

2: SDR image is output with monitor gamma. *3: To be supported within 2019. *4: P2 Network Setting Software is required for using the RTMP and RTMPS functions. See the “Connectivity-verified live video services” section for live video streaming services with confirmed compatibility.
New CX Series Delivers Next-Generation Creativity and Connectivity

**HDR (High Dynamic Range) Image**

4K/HDR Image Acquisition

Equipped with a new, high-definition, high-sensitivity MOS sensor, the CX Series supports multi-formats, such as 4K (UHD: 3840×2160), FHD, HD, and SD. It also features HLG (Hybrid Log Gamma)*1 to support HDR (High Dynamic Range) image acquisition. When shooting in HLG, it can be used to monitor and output SDR images.

Easy IP Connection, NDI | HX Compatibility

The CX Series is the industry’s first camcorder to support NDI | HX.*5 Equipped with an NDI | HX mode, it allows video transmission and camera control via IP connection, without using an external converter. When connected to a system configured with PTZ cameras, it enables end-to-end video production of live events and web distribution.

**RTSP/RTMP/RTMPS-Compatible HD Streaming**

HD streaming is possible while images are being acquired,*2 and RTSP, RTMP and RTMPS streaming methods are compatible.*4 Facebook, YouTube, and other streaming services are also supported. This allows the CX Series to be used for live coverage of concerts and sports events as well as for live streaming of breaking news. Multicast streaming is also supported.*3

**MOV/P2 MXF File Formats Supported**

The CX Series records MOV files that are highly compatible and easy to use. It also supports the P2 file format for broadcasting, enabling AVC-Intra or AVC-LongG HD recording.*3

**10-bit 4:2:2 Recording or New HEVC Codec**

The CX Series is capable of recording in various formats at different compression rates (see the table below). It can record high-image-quality 10-bit 4:2:2, 4K 30p/25p, and HD 60p/50p. The new HEVC Codec achieves high-quality 4K 60p/50p, 10-bit 4:2:0 at a bit rate of 100 Mbps for playback using the free VLC Media Player or QuickTime Player on a notebook PC or MacBook.*8

---

*5: 4K image output not supported in NDI | HX mode. To use this function, an activation keycode from NewTek is required. Keycodes can be purchased from the following website: http://new.tk/ndi_panasonic
*6: iPad: iOS 9 or later is supported. Android devices: Android 5.0 or later is supported. Wireless module (sold separately; AJ-WM50/WMS50G or recommended third-party Wi-Fi dongle) is required. *7: There are some conditions under which streaming is not possible, such as when recording in UHD format or using NDI | HX mode. Please see the Operating Instruction Manual for details. *8: To be supported within 2019. AVC-Intra200/100/50 codec will be supported in the future. Use a microP2 card for recording in P2 format. *9: Playback may lack smoothness depending on the PC environment, such as storage and memory devices.

High Picture Quality Codec, High Reliable Media, HDR Support and Various Remotes for Broadcast and Professional Needs.

FHD Image Acquisition with AVC-ULTRA Codecs
The AVC-ULTRA codecs feature high picture quality, high efficiency H.264 based video compression. The main recording can be selected from AVC-Intra200 for mastering, AVC-Intra100 with FHD/60p/50p support, AVC-Intra50, or AVC-LongG (50/25/12) for FHD 10-bit 4:2:2 with affordable bit rate. While offering a low bit rate suitable for previewing, sub recording AVC-Proxy provides an FHD resolution mode that can be used as is for breaking news and similar applications. The conventional DVCPRO codec is also supported.
*Applicable codec varies depending on the models. Please see page 47 to 48 for details.

HDR Support (AJ-PX5100GJ)
In addition to being equipped with HLG “Hybrid Log Gamma”, the following functions assist HDR acquisition.
• SDR Monitoring Gamma: Gamma curves for monitoring HLG images with the SDR viewfinder or other SDR monitor. These gamma curves possess characteristics for expressing the gradation in high-brightness area while maintaining the contrast of ordinary-brightness area.
• HDR/SDR Output: Dual SDI can output both HDR (HLG) and SDR (monitoring gamma) simultaneously.
• One-Push HLG View: While the viewfinder display with monitoring gamma ordinary, the gradation of high-brightness area can be checked by selecting HLG temporarily.
• High-Brightness Zebra Display: The zebra pattern can be displayed in white-out areas of the viewfinder image.
* BT.709 color gamut (BT.2020 is not supported)

Advanced Function Networks Support Streaming and File Transfer
Single Dongle, Flexible Network Connection
Proxy preview, camera remote, and playlist editing can all be done on a PC, Mac, or tablet connected to wireless LAN. When connected to the internet, files can be transferred and live streaming can be done. Nimble operation is possible using single dongle of the Wireless Module (optional: AJ-WM50/WM50G, AJ-WM30 or third party products. Wired LAN connection and LiveU/TVU bonding services are also supported. The connection method is selected to match the usage environment.

RTMP/RTSP Compatible Full-HD Streaming
Full-HD streaming is possible while images are being acquired. Both RTSP and RTMP streaming methods are compatible. And Facebook, YouTube, and other streaming services are supported. A unique QoS (Quality of Service) mode* optimizes the bit rate according to the network conditions for stable streaming distribution. High performance is also achieved by linking to P2SS (streaming server).+2

Reliable Recording Media:
P2 Card/microP2 Card
The P2 card, which was designed for broadcast use, features a rugged case and highly reliable connector. The microP2 card features high reliability and a large capacity together with a reduced size and cost. In an emergency, an SD memory card can also be used.

Versatile Remote Control Compatibility
* 10-pin Remote Terminal: All camera recorder models are equipped. Dedicated cord supplies power to the remote control and a composite video to confirm the menu. Camera remote operation is enabled with the optional AG-EC4G extension Remote Control Unit or AK-HRP200G Remote Operation Panel.
* IP Remote (LAN Terminal): All camera recorder models are equipped. Remote operation, including menu settings, is possible by using the optional AK-HRP200G Remote Operation Panel.
* iPad Remote: All camera recorder models are compatible. P2 ROP APP (downloadable for free from the App Store) for the following iPad*: wireless remote control operations: picture quality setting, rec start/stop, clip thumbnail display and proxy preview, metadata display and editing.
* For all remote controllers, only functions that are supported by each camera recorder can be controlled.
*1: It supports iOS 12.
* The Apple App Store and iPad are service marks or trademarks of Apple Inc. registered in the United States and other countries.

* For details, see, “Streaming Mode” and “Streaming Output,” and “Notes Regarding Network Functions.”
* It may not be possible to deliver streaming from the unit when services such as Facebook or YouTube stopped or discontinued operation for some reason.
*1: P2 Streaming Receiver software (Windows only, not supported by Mac; available free of charge) is required for receiving the QoS mode.
*2: A server with the Streaming Receiver Server Kit (Optional: AJ-SRK001G) installed.
By connecting the AJ-PX5100GJ/PX800G/PX380G/PX270/PG50 to the cloud-based P2 Cast integrated control system, a connectivity that approaches live relay can be achieved with automatic operation and camera control for interviews and other ENG. The system also helps to reduce costs.

*For details, see P2 Cast <https://pro-av.panasonic.net/en/p2cast/index.html>*

Automatic Upload from a P2cam to a Cloud Server
Recorded clips are automatically uploaded in the background from a P2cam to a cloud server. The Rec During Upload function also enables recording and playback while transferring data. In the event that the network connection or power is cut off during the data transfer, the transfer operation resumes immediately after the network connection or power is restored. This allows the camera operator to concentrate on shooting without being bothered by uploading operations.

Near-Live Upload
This is a unique P2cam and P2 Cast solution. In the Near Live mode, image data is split into 2-minute files, and those proxy video data files are automatically and sequentially uploaded to the P2 Cast Cloud. The files can be previewed on a web browser. After the shooting/recording is finished, the data is merged into one clip on the P2 Cast Cloud. Then it can be shared on the web.

News Content Web Sharing, Integrated Camera Control
- Allows sharing of proxy clips on the P2 Cast Cloud by multiple staff members.
- Highlight Editing function reduces the time for previewing, editing and obtaining high-res news image sources.
- Monitors camera recorder status and GPS location information.
- Enables remote metadata editing and remote camera recorder setting.
- P2 Cast Bridge: Connects directly to nonlinear editors and news systems.
- P2 Cast Mobile App: Connects smartphone cameras to P2 Cast/P2SS.
* Clips for Interval Rec, Loop Rec, One-Clip Rec, and One-Shot Rec are not automatically transferred. The streaming function also does not operate.
* See the following App Store for information on the P2 Cast Mobile operating environment.
  - App Store is a registered service mark of Apple Inc.
  - iPhone is a registered trademark of Apple Inc. in the U.S. and other countries.

P2 Streaming Server Delivers Full-HD Streaming
- Provides stable streaming by original QoS technology.
- Features drag & drop and other intuitive GUI operations.
- Manages 1,000 cameras and monitors 20 cameras/page.
- Allows a maximum of 4 simultaneous streaming outputs.

*1: The AU-XPD3 do not support the CPS (Content Protection System). *2: Requires the optional AJ-P2AD1G Memory Card Adapter to use the microP2 card.

*3: Connection of the AU-XPD1 requires two USB cables. Power supply to be connected with an AC adaptor or USB 3.0 port of PC.

*4: Encoding formats cannot be used because the microP2 Card B Series does not support the CPS (Content Protection System). If the card is mistakenly formatted with a P2 device, card access will be temporarily disabled. It can be recovered by removing a card from P2 equipment.

*5: “AVC-Intra100 of 1080/59.94p,50p recording” and “AVC-Intra200 recording” is not supported.

*Each recording codec differs for every model. Please look at the following table for details. Depending on a model and a codec, upgrade is required. Please go to the Product Information on the Panasonic web page (https://proav.panasonic.net/) *1: Each recording audio signal differ for every model. Eight-channel record is impossible for a camera recorder all model. *2: For 1080/60ip and 1080/50p, the recording times become 1/2 of those shown above. All of the times apply when single clips are recorded continuously one after the other on a P2 card. Depending on the number of clips to be recorded, the recordable time may be shorter than the times given. *3: This mode can be chosen only from the AJ-PX270/PX230/PD500/PG50.

**NOTES REGARDING THE HANDLING OF P2 FILES USING A PC**

**Mounting and Transferring Files**
The PC must be installed with the included P2 driver in order to recognize, copy, and transfer P2 files. This driver is also necessary when using the PC card slot and when handling P2 files stored on a hard-disk device, such as a P2 store. For other operating requirements, refer to the P2 installation manual. The P2 driver and the P2 installation manual can be downloaded free from a Panasonic website. Visit <https://pro-av.panasonic.net/en/download/>

**Preview and Nonlinear Editing**
To preview (play) P2 files on a PC, it is necessary to install P2 Viewer Plus software (downloadable for free, for Windows and Mac), both from Panasonic, or P2-compatible editing software available from other companies (for details, visit <https://pro-av.panasonic.net/en/sales_op2/partners.html>). Note that each software places specific requirements on the operating environment, and the operating environment must meet additional requirements to play and edit HD content on Windows PCs and Macs. For P2 Viewer Plus download and operating requirement information, visit <https://pro-av.panasonic.net/en/download/> For operating requirements and details of other P2 editing software, visit the website of the relevant software manufacturer.

**Notes Regarding Network Connections**
- **For 4G/LTE connection:** 4G/LTE module is required from a 3rd party. Availability of this function may vary depending on areas. For details, please visit Panasonic website <https://pro-av.panasonic.net/en/sales_op2/server/4glt.htm>
- **For wireless LAN connection:** Wireless module (optional) is required. For the connection confirmed wireless module details please visit Panasonic website <https://www.panasonic.com.jp/en/telematics/soft Wireless_module.html>. For the OS, browser, device compatibility information, see “Service and Support” on the Panasonic website <https://www.wi-fi.panasonic.com/>. Please contact your provider to get Public IP (Global IP). To display the streaming video using P2 browser, player is required (VLC MEDIA PLAYER for Windows PC, QuickTime Player for Mac). P2 Streaming Receiver software (Windows only, not supported by Mac, available free of charge) is required for receiving the QoS mode. Please visit Panasonic website <https://pro-av.panasonic.net/en/download/>
- **For LiveU and TVU bonding services:** Connection requires communication devices offered by both LiveU and TVU Networks. For details, please visit the following website. <https://pro-av.panasonic.net/en/sales_op2/bonding devices/index.html> “Connection Confirmation Bonding Devices”

**Precautions When Using SDHC/SDXC Memory Cards with the AJ-P2AD1G Memory Card Adapter**
- Only the DV, DVCPro, DVCPro50, and AVC-Intra50 recording formats can be used when using the Memory Card Adapter on P2 Series products. Memory cards of Class 10 or higher are recommended, but recording may not be possible with some cards. -DVCProHD and AVC-Intra100 cannot be used. Memory card data capacity must be 4 GB to 128 GB. -Interval Rec, One-Shot Rec, Loop Rec, or One-Clip Rec cannot be used.
