indicates safety information.

## **WARNING:**

- To reduce the risk of fire or electric shock, do not expose this equipment to rain or moisture.
- To reduce the risk of fire or electric shock, keep this equipment away from all liquids. Use and store only in locations which are not exposed to the risk of dripping or splashing liquids, and do not place any liquid containers on top of the equipment.

## **WARNING:**

Always keep memory cards (optional accessory) or accessories (microphone holder screws) out of the reach of babies and small children.

## **CAUTION:**

Do not remove panel covers by unscrewing them. To reduce the risk of electric shock, do not remove cover. No user serviceable parts inside. Refer servicing to qualified service personnel.

## **CAUTION:**

The mains plug of the power supply cord shall remain readily operable.  
The AC receptacle (mains socket outlet) shall be installed near the equipment and shall be easily accessible.  
To completely disconnect this equipment from the AC mains, disconnect the power cord plug from the AC receptacle.

## **CAUTION:**

Danger of explosion or fire if battery is incorrectly replaced or mistreated.  
Do not disassemble the battery or dispose of it in fire.  
Do not store in temperatures over 60°C.  
Do not expose the battery to excessive heat such as sunshine, fire or the like.

### **For Battery Pack**

Use specified charger.  
Replace only with same or specified type.

## **CAUTION:**

To reduce the risk of fire or electric shock and annoying interference, use the recommended accessories only.

## **CAUTION:**

In order to maintain adequate ventilation, do not install or place this unit in a bookcase, built-in cabinet or any other confined space. To prevent risk of electric shock or fire hazard due to overheating, ensure that curtains and any other materials do not obstruct the ventilation.

## **CAUTION:**

Do not lift the unit by its handle while the tripod is attached. When the tripod is attached, its weight will also affect the unit's handle, possibly causing the handle to break and hurting the user. To carry the unit while the tripod is attached, take hold of the tripod.

## **CAUTION:**

Excessive sound pressure from earphones and headphones can cause hearing loss.

## **CAUTION:**

Do not leave the unit in direct contact with the skin for long periods of time when in use.  
Low temperature burn injuries may be suffered if the high temperature parts of this unit are in direct contact with the skin for long periods of time.  
When using the equipment for long periods of time, make use of the tripod.

## **CAUTION:**

Keep metal objects (such as necklaces and hairpins) away from the battery.  
Short-circuiting may occur across the terminals, causing the battery to heat up, and you may seriously burn yourself if you touch the battery in this state.

## Caution for AC Mains Lead

**FOR YOUR SAFETY PLEASE READ THE FOLLOWING TEXT CAREFULLY.**

This product is equipped with 2 types of AC mains cable. One is for continental Europe, etc. and the other one is only for U.K.

Appropriate mains cable must be used in each local area, since the other type of mains cable is not suitable.

### TYPE C

(FOR CONTINENTAL EUROPE, ETC.)

Not to be used in the U.K.)

### TYPE BF

(FOR U.K. ONLY)

### FOR U.K. ONLY

This appliance is supplied with a moulded three pin mains plug for your safety and convenience.

A 5 amp fuse is fitted in this plug.

Should the fuse need to be replaced please ensure that the replacement fuse has a rating of 5 amps and that it is approved by ASTA or BSI to BS1362.

Check for the ASTA mark  or the BSI mark  on the body of the fuse.

If the plug contains a removable fuse cover you must ensure that it is refitted when the fuse is replaced.

If you lose the fuse cover the plug must not be used until a replacement cover is obtained.

A replacement fuse cover can be purchased from your local Panasonic Dealer.

### How to replace the fuse

1. Open the fuse compartment with a screwdriver.

2. Replace the fuse.

### For Turkey

AEEE Yönetmeliğine Uygundur.

AEEE Complies with Directive of Turkey.

The rating plate is on the underside of the Camera Recorder, Battery Charger and AC Adaptor.

Manufactured by: Panasonic Corporation, Osaka, Japan

Importer's name and address of pursuant to EU rules:

**Panasonic Marketing Europe GmbH**

**Panasonic Testing Centre**

Winsbergring 15, 22525 Hamburg, Germany

■ **Batteries that may be used with this product (as of October 2017)**

Panasonic AG-VBR59 / AG-VBR89 / AG-VBR118 / VW-VBD58 batteries may be used with this product.

Note regarding the Power Management function specified under COMMISSION REGULATION (EC) No 1275/2008 implementing Directive 2009/125/EC of the European Parliament and of the Council.

This device is designed and manufactured for use at a broadcasting station and/or in a similar environment. This device is not equipped with a Power Management function or the Power Management function is set to OFF as it will prevent the device from fulfilling its intended purpose for the reasons below.

1. If the device is a Studio Camera, a Weather Camera, a Mixer or other processor:  
A Power Management function may cause the device to suddenly stop during recording or while On Air.
2. If the device is a Studio Monitor:  
A Power Management function may cause video for the confirmation of whether a signal is normal, or whether the signal has been lost, to be un-viewable.
3. If the device is a Camera Recorder:  
A professional camera recorder must be able to start quickly at any time, but a Power Management function will cause an increase in the time taken to resume from Stand-by mode.

It has been found that counterfeit battery packs which look very similar to the genuine product are made available to purchase in some markets. Some of these battery packs are not adequately protected with internal protection to meet the requirements of appropriate safety standards. There is a possibility that these battery packs may lead to fire or explosion. Please be advised that we are not liable for any accident or failure occurring as a result of use of a counterfeit battery pack. To ensure that safe products are used we would recommend that a genuine Panasonic battery pack is used.

## To remove the battery

### Main Power Battery (Lithium ion Battery) (Refer to page 29 for the detail.)

Press the battery release button.

Battery release button

### Back-up Battery (Lithium Battery)

- For the removal of the battery for disposal at the end of its service life, please consult your dealer.

## Battery Charger / AC Adaptor

Disconnect the AC mains plug from the AC mains socket when not in use.

### ■ The symbols on this product (including the accessories) represent the following:

## License

---

- This product is licensed under the AVC Patent Portfolio License. All other acts are not licensed except private use for personal and non-profit purposes such as what are described below.
  - To record video in compliance with the AVC standard (AVC Video)
  - To play back AVC Video that was recorded by a consumer engaged in a personal and non-commercial activity
  - To play back AVC Video that was obtained from a video provider licensed to provide the videoVisit the MPEG LA, LLC website (<http://www.mpegla.com/>) for details.
- Separate license contract with MPEG-LA is required to record in a memory card with this product and to distribute that card to end users for a profit. The end user mentioned here indicates a person or organization that handles contents for a personal use.

## How to read this document

---

### ■ Illustrations

- Illustrations of the product appearance, menu screens, etc., may vary from the actual.

### ■ Conventions used in this manual

- Words and phrases in [ ] brackets indicate content displayed in the LCD monitor.
- Words and phrases in < > brackets indicate design text used on this camera, such as button names.

### ■ Reference pages

- Reference pages in this document are indicated by (page 00).

### ■ Terminology

- SD memory card, SDHC memory card, and SDXC memory card are referred to only as “SD card” unless distinguished otherwise.
- Video that is created during a single recording operation is referred to as a “clip”.

# Chapter 1 **Overview**

---

Before using the camera, read this chapter.

## Before using the camera

### ■ Before using the camera, always check if the built-in battery is not consumed, and then set the date/time.

The internal clock of the camera is reset when the built-in battery has been consumed. This may result in the meta data of the clip not recorded correctly, and it may not display correctly in the thumbnail screen.

Check if the built-in battery is not consumed before using. (page 42)

Also, set the correct date/time. (page 43)

### ■ When using this product during rain or snow or when at the beach, be careful that water does not get inside the camera.

Water causes damage to the camera and memory card. (Repair may be impossible)

### ■ Keep the camera away from devices that produce magnetism (TVs, TV games, etc.).

- Do not use the camera on top of a TV or around it. Image or audio of the camera may be distorted by the electromagnetic wave emitted from a TV.
- The recorded content may be damaged or image may be distorted by a strong magnetic field produced by speaker or large motor.
- Do not use the camera on top of a microcomputer or around it. Image or audio of the camera may be distorted by the electromagnetic wave emitted from a microcomputer.
- The camera may not operate properly due to a harmful effect from a device producing magnetism. In such case, turn off the camera and either remove the battery or unplug the AC adaptor from the power outlet. Then, mount the battery or connect the AC adaptor again. After that, turn on the camera.

### ■ Do not use the camera near a radio transmitter or high-voltage device.

Using the camera recorder near a radio transmitter or high-voltage device may cause harmful effect to the recorded video or audio.

### ■ Take care so sand and/or dust do not get inside the camera when using the camera at the beach, etc.

Sand and dust may damage the camera and memory card. (Be careful when inserting or removing the memory card)

### ■ AC adaptor, battery charger, and battery

- It may take more time to charge or may not be able to charge when the temperature of the battery is extremely high or extremely low.
- When the charging lamp continues to flash in orange, check if there is any debris, foreign object, or dirt attached to the terminal section of the battery or the battery charger, and reconnect it correctly. Always disconnect the power plug from the power outlet before removing the debris, foreign object, or dirt attached to the terminal section.
- The charging lamp will flash in orange when the temperature of the battery is extremely high or low. Then, charging will start automatically after the battery reaches chargeable temperature.
- If the charging lamp continues to flash even when the battery is at its optimal temperature, the battery or battery charger may be damaged. Consult the dealer.
- Noise may be generated in radio when the camera is used close to a radio (especially when receiving AM). Keep a distance of 1 m or more when using.
- Oscillating sound may generate inside the AC adaptor or the battery charger during the use, but this is not a malfunction.
- Always disconnect the power plug from the power outlet after the use. (Power of approximately 0.1 W is consumed by the AC power itself if kept connected)
- Do not get the terminal section of the AC adaptor, the battery charger, or the battery dirty. Install the device close to the power outlet so the disconnection device (power plug) can be easily reached.

### ■ SD card

- Surface of camera or the SD card may get slightly hot when used for a long period of time, but this is not a malfunction.
- The memory capacity described on the label of the SD card is a total of following capacities.
  - Capacity to protect and manage copyright
  - Capacity usable as the normal memory on the camera or a PC.
- Do not apply strong impact, bend, or drop the SD card.
- Data in the SD card may get destroyed or erased in following cases.
  - Electrical noise or static electricity
  - Malfunction of the camera or the SD card
- Do not perform following operations when accessing the SD card (card 1 access lamp/card 2 access lamp is flashing in orange).
  - Removing the SD card
  - Disconnecting battery or the AC adaptor without turning off the camera
  - Apply vibration of impact

### ■ Take care not to drop the camera when carrying the camera.

- Strong impact will damage the camera, and it may not operate properly.
- Hold the handle or grip when carrying the camera, and handle it carefully.

### ■ Do not apply insecticide or volatile material to the camera.

- The camera may deform or the paint may peel off when insecticide or volatile material is applied.
- Do not allow the camera to remain in contact with a rubber or vinyl object for a long period of time.

### ■ Disconnect the battery or disconnect the AC cable from the power outlet after the use.

### ■ Battery characteristics

The battery is a rechargeable lithium-ion battery. It produces electrical energy via an internal chemical reaction. This chemical reaction is effected by the ambient temperature and humidity. The usable time of the battery becomes shorter when the temperature gets higher or lower. When used in an environment with extremely low temperature, it can only be used for approximately five minutes.

When the battery is in an extremely hot environment, its protective function will operate and the camera recorder cannot be used temporarily.

■ **After using the camera recorder, be sure to remove the battery.**

Securely remove the battery from the camera.

(Minute current is consumed even if the camera is turned off when the battery is kept mounted)

The battery will become over discharge and may become unusable even if it is recharged when the battery is kept mounted for long period of time.

Do not remove the battery when the power is turned on.

Turn off the power and remove the battery after the operation lamp goes completely out.

■ **Take proper care of the battery terminal.**

Do not allow dust or foreign objects on the battery terminal.

Confirm that the battery and its terminal section is not deformed when the battery is dropped by mistake.

Do not mount the deformed battery into a camera or mount to the battery charger. This may damage the camera or the battery charger.

■ **Cautions when throwing memory cards away or transferring them to others**

Formatting memory cards or deleting data using the functions of the camera or a computer will merely change the file management information: it will not completely erase the data on the cards.

It is recommended to completely erase the data in following method when discarding/conveying.

- Physically destroy the memory card itself
- Completely erase the data in the memory card using a commercially available data erasing software for PC, etc.

Users are responsible for managing the data stored in their memory card.

■ **LCD monitor**

- Do not continuously display the same image or text on the LCD monitor for a long period of time. The image may be burned on to the screen. It will return to normal after leaving the camera recorder turned off for several hours.
- Condensation sometimes forms on the LCD panel of the LCD monitor in locations subject to extreme temperature differences. If this happens, wipe with a soft, dry cloth.
- The LCD monitor will be slightly darker than normal immediately after the power is turned on when the camera is very cold. It will return to its regular brightness when the internal temperature increases.
- The LCD monitor is precisely managed so that at least 99.99% of the dots are effective pixels, but there may be 0.01% or less of pixels that are missing or always lit. This is not a malfunction and it has no effect whatsoever on the recorded images.
- It may become difficult to see or difficult to recognize the touch when a LCD protection sheet is affixed.

■ **Do not point the lens toward the sun.**

Doing so might damage the components inside.

■ **Caution regarding laser beams**

The MOS sensor may be damaged if the MOS sensor is subjected to light from a laser beam.

Take sufficient care to prevent laser beams from striking the lens when shooting in an environment where laser devices are used.

■ **Note the following points.**

- If you prepare to record important images, always shoot some advance test footage to verify that both pictures and sound are being recorded normally.
- Panasonic will not assume liability when video or audio recording fails due to a malfunction of the camera or the memory card during the use.
- Set the calendar (datetime of the internal clock) and the time zone, or check the setting before recording. This will have an effect on the management of the recorded contents.

■ **Exemption of liability**

Panasonic is not liable in any way regarding following.

- 1 **Incidental, special, or consequential damages caused directly or indirectly by the camera**
- 2 **Damages, breakage of the camera, etc., caused by misuse or carelessness of the customer**
- 3 **When disassembly, repair, or modification of the camera is performed by the customer**
- 4 **Inconveniences, damnification, or damages by not being able to record and/or display the video due to any reasons including failure or malfunction of the camera**
- 5 **Inconveniences, damnification, or damages resulting from malfunction of the system combining with any third party equipment**
- 6 **A liability claim or any claim for a privacy violation by an individual or a group that was the subject of the video that the customer has shot (including recording) that became public by any reason (including using with the network user authentication turned OFF)**
- 7 **The registered information is lost due to any reason (including initializing this camera because the authentication information such as user name or password is forgotten)**

■ **Cautions regarding network**

Since this camera is used connected to a network, following mischief may occur.

- 1 **Leaking or divulging of information through the camera**
- 2 **Fraudulent operation of the camera by a malicious third party**
- 3 **Obstruction and/or stopping of the camera by a malicious third party**

It is customer's responsibility to take sufficient network security measures including the following to prevent damage caused by such mischief. Please note that Panasonic is not liable in any way for damage caused by such mischief.

- Use the camera on a network where safety is secured by using a firewall, etc.
- When using the camera on a system where a PC is connected, make sure that checking and cleaning of infection by computer virus and malicious program is performed periodically.

- In order to prevent malicious attacks, use the authentication system and change the default setting values by using 8 characters or more including 3 or more character types for the authentication information (such as user name and password) so that a third party cannot guess your authentication information.
- Store the authentication information (user name, password, etc.) appropriately so it is not visible to the third party.
- Periodically change the authentication information (user name, password, etc.).
- To prevent the setting information in the camera to leak to the network, execute measure such as restricting the access with user authentication, etc.
- Do not install in a location where the camera, cable, etc., can be easily damaged.

### ■ Security

Take caution so the camera is not stolen, lost, or neglected. Note that Panasonic is not liable to leakage, falsification, or loss of information caused by them.

### ■ Software information about this product

- 1 **This product includes software licensed under GNU General Public License (GPL) and GNU Lesser General Public License (LGPL), and customers are hereby notified that they have rights to obtain, re-engineer, and redistribute the source code of these software.**
- 2 **This product includes software licensed under MIT-License.**

- Already mounted to the LCD monitor.

### LCD monitor mounting attachment (page 35)

- Already mounted to the LCD monitor.

### Handle (page 31)

- Already mounted to the camera.

### Mount cap (page 39)

- Already mounted to the camera.

### NOTE

- Appropriately discard the AC cable cap (if attached) and packing materials after taking the product out.

## Use of the camera on a system

Anything other than the camera, LCD monitor, handle, and grip is optional. Use the following recommended parts.

### Basic configuration devices

Equipment necessary for shooting with the camera, such as batteries, etc.

Part name	Part No.	Remark
EF lens*	CANON/ZEISS/SIGMA	"Mounting the lens"
Super-directional electret stereo microphone (phantom +48V)	AG-MC200G	"Mounting the external microphone"
Battery	AG-VBR59 (7.28 V, 5900 mAh, product compatible to the included battery) AG-VBR89 (7.28 V, 8850 mAh) AG-VBR118 (7.28 V, 11800 mAh) VW-VBD58 (7.2 V, 5800 mAh)	"Attaching and removing the battery"
Battery charger	AG-BRD50 (Product compatible to included battery charger) AG-B23	"Charging the battery"
SD card*	Visit the support desk at the website*	"Preparing the SD card"

\* For the latest information not included in these Operating Instructions, refer to the support desk at the following website.  
<https://pro-av.panasonic.net/>

### Expanded configuration devices

In addition to the basic components, a wireless module can be used.

Part name	Part No.	Remark
Wireless module	AJ-WM50	"Mounting the wireless module"

For details on wireless modules that can be connected, refer to the support desk at the following website.  
<https://pro-av.panasonic.net/>

## What you can do with this camera

### Interchangeable lens 4K/60P camera

This camera is a interchangeable lens 4K/60P camera with following features.

- High-resolution recording of 4:2:2 (10 bits) 4K/2K with newly developed super 35 mm 5.7K sensor and new LSI is possible\*1
  - Supports 120fps/240fps recording in 2K, FHD\*2
- Equipped with new functions to arouse the creativity
  - RAW output: Output RAW, 5.7K/30P, 4K/60P (crop size), or 2K/240P (crop size) from the <SDI OUT> terminal
  - Supports HDR production (V-Log/HLG)
  - Can easily perform IR recording, making possible of fantastical image representation
- Equipped with interfaces supporting the designs and recordings for wide range of usage
  - A compact design considering to install on a drone or a gimbal, each unit (handle, grip, LCD monitor) can be removed in accordance with the recording style
  - Equipped with first in industry (as of October 2017) camera internal image stabilizer (E.I.S.)
  - Can simultaneously output in 4:2:2 (10 bits) from <SDI OUT> terminal/<HDMI> terminal
  - Equipped with double card slots compatible to high-speed bus interface UHS-II  
Supports 400 Mbps ALL-Intra recording that can record in higher picture quality
  - Adopted the EF lens mount as the lens mount  
Can use the EF lenses with various lineup

\*1 Up to 4K/30P, 2K/120P

\*2 When the frame rate exceeding 120P, internal recording eight-bit 4:2:0, Four Thirds image circle crop size

### Recording to the memory card

#### SD card

Recording in following types is possible.

- 4K, UHD, 2K, FHD recording  
(4:2:0 (8 bits) MOV recording/4:2:2 (10 bits) MOV recording)
- AVCHD recording
- Variable frame rate recording  
(Supports 120fps/240fps recording in 2K, FHD)
- Simultaneous recording
- Relay recording
- Interval recording

### Linking to external devices

#### Connecting to monitor

A monitor can be connected to output images.

- Use the double shielded cable supporting 4K/60P as the HDMI cable (optional). It is also recommended to use the Panasonic 4K/60P compatible HDMI cable.
- For the BNC cable (optional) connected to the <SDI OUT> terminal, prepare a double-shielded cable equivalent to 5C-FB.

#### Remote operation by iPad or Android terminal

The camera can be connected to the wireless LAN by connecting a wireless module compatible to the camera to the <USB2.0 HOST> terminal of camera.

Following operations are possible by connecting the camera with an iPad or an Android terminal with EVA ROP app installed.

- Checking camera status
- Camera remote control (recording control, camera setting such as shutter, EXPOSURE INDEX, iris, or white balance, and checking the time code)
- Menu Operations

For details of the wireless module supported by the camera and the operation of the EVA ROP app, visit the support desk at the following website.

<https://pro-av.panasonic.net/>

## Chapter 2 **Description of Parts**

---

This chapter describes the names, functions, and operations of parts on the camera.

## Camera

### Left side

Following terminal is inside the cover.

- <LCD> terminal

**1 Accessory mounting section**

The included LCD monitor mounting attachment can also be mounted.

**2 HDMI cable clamp**

Fixes the HDMI cable.

**3 Microphone cable clamp**

Fixes the external microphone cable.

**4 Microphone holder mounting section**

Mounts the included microphone holder adaptor and the microphone holder.

**5 LCD monitor cable clamp**

Fixes the cable for the LCD monitor unit.

**6 Focus hook**

Indicates the position of the image surface plane of the image sensor.

**7 Grip mounting section**

Mounts the included grip.

**8 <LCD> terminal**

Connects the cable for the LCD monitor unit.

**9 <REMOTE> terminal**

Connects the cable for grip.

**10 <GRIP RELEASE> button**

Used when removing the grip from the camera.

**11 Grip cable clamp**

Fixes the grip cable.

## Right side

**1 LCD monitor unit mounting section**

Mounts the included LCD monitor mounting attachment.

**2 Handle**

This is a removable handle.  
Already mounted to the camera.

**3 REC button**

Starts or stops the recording.

**4 <ND FILTER> button**

Switches the ND filter by pressing the <+> button or the <-> button.

The set value can be checked in the ND filter display of the VIEW screen. Displayed contents of the ND filter display are as follows.

**[ND:1.8]:** Reduces the amount of light entering the MOS sensor to 1/64.

**[ND:1.2]:** Reduces the amount of light entering the MOS sensor to 1/16.

**[ND:0.6]:** Reduces the amount of light entering the MOS sensor to 1/4.

**[ND:CLR]:** The ND filter is not used.

**5 <IRIS> dial**

Controls the iris of the EF lens.

**Turn upward:** Controls toward closing.

**Turn downward:** Controls toward opening.

**Press:** Switches between <AUTO>/<MANU>.

**6 <MENU> button**

Displays the menu. Pressing the <MENU> button while the menu is displayed closes the menu.

**7 <AWB>/<USER 6> button**

Adjusts the white balance.

Also, this is also used as the USER button (USER6).

**8 Accessory mounting section**

The included LCD monitor mounting attachment can also be mounted.

**9 <CH1> switch**

Selects the method to adjust the audio input level for the <AUDIO INPUT 1> terminal.

**<AUTO>:** Adjusts automatically.

**<MANU>:** Adjusts with the <AUDIO LEVEL CH1> knob.

**10 <AUDIO LEVEL CH1> knob**

Adjusts the audio input level when the <CH1> switch is set to <MANU>.

**11 <AUDIO LEVEL CH2> knob**

Adjusts the audio input level when the <CH2> switch is set to <MANU>.

**12 <CH2> switch**

Selects the method to adjust the audio input level for the <AUDIO INPUT 2> terminal.

**<AUTO>:** Adjusts automatically.

**<MANU>:** Adjusts with the <AUDIO LEVEL CH2> knob.

**13 Power lamp**

Indicates the status of power. Illuminates in red when the power is on.  
To flash the lamp or not can be set in the menu.

**14 Built-in speaker**

Outputs audio during playback.  
Audio is not output from the built-in speaker when headphones are connected to the headphone terminal.

**15 USER buttons (<USER 1>, <USER 2>/<VIEW>, <USER 3>/<INFO>)**

A function selected by the user can be assigned to each button. Pressing the button while the VIEW screen is displayed will perform the assigned function.  
Pressing the button while displaying the HOME screen will perform the operation of the <VIEW>/<INFO> button displayed in orange in the camera.  
Pressing the <VIEW> button will display the VIEW screen, and pressing the <INFO> button will display the INFO screen.

**16 <E.I.S.>/<USER 4> button**

Enables/disables the electronic image stabilization function.  
Also, this is also used as the USER button (USER4).

**17 <WFM>/<USER 5> button**

Displays/hides the waveform monitor displayed on the LCD monitor.  
Also, this is also used as the USER button (USER5).

**18 <LOCK> switch**

Sliding toward the <🔒> side disables the operations other than the power switch.  
Sets the button and switch to disable the operation in the [SYSTEM SETTINGS] menu → [SIDE LOCK].

**19 <WB>/<USER>/<ISO/dB> switch**

Use by switching between <WB> (white balance)/<USER> (USER button)/<ISO/dB> (gain adjustment) functions.  
The selected function is operated with the multialdial.

**20 Multialdial**

Moves, selects, and sets the menu while the menu is displayed.  
Also, operates the selected function with the <WB>/<USER>/<ISO/dB> switch.

**21 <EXIT> button**

Returns to one level higher when the menu is displayed. Pressing the <EXIT> button without confirming the setting value will not reflect the change in the setting.

**22 <HOME> button**

Displays the HOME screen on the LCD monitor.

**23 <THUMBNAIL> button**

Displays the thumbnail screen on the LCD monitor.  
Pressing the <THUMBNAIL> button again displays the VIEW screen.

**24 Power switch**

Switches between power on/standby.  
To turn on, set the power switch to <⏻> (ON). To set to standby, set the power switch to <🔌> (standby).

**Front side**

**1 Light sensor**

Detects indoor and outdoor light.  
When using the auto tracking white balance (ATW), do not obstruct the light sensor.

**2 Built-in microphone**

This is the built-in stereo microphone <L>/<R>.

**3 Front tally lamp**

Illuminates when the recording is started. Flashes when the battery level becomes low.  
To flash the lamp or not can be set in the menu.

**4 EF lens mount**

EF lens is mounted.

- The figure shows the status when the mount cap is attached. Remove the mount cap when the lens is to be mounted.

**5 Lens lock unlock button**

The lock is unlocked when the lens is to be removed from the camera.

**6 Fan inlet**

Fan inlet for cooling fan. Do not block this while the camera is being used.

**Rear side**

Following terminals, card slots, and card access lamps are inside the cover.

- <HDMI> terminal
- <USB2.0 HOST> terminal
- <SERVICE> terminal
- Headphone terminal
- <SDI OUT> terminal
- <TC IN/OUT> terminal
- <DC IN 12V> terminal
- Card slot 1/card slot 2
- Card 1 access lamp/card 2 access lamp

**1 Card 1 access lamp**

Indicates the access status for recording and playback of the SD card inserted in the card slot 1.  
To flash the lamp or not can be set in the menu.

**2 Card slot 1**

Slot for SD card.

**3 Card slot 2**

Slot for SD card.

**4 Card 2 access lamp**

Indicates the access status for recording and playback of the SD card inserted in the card slot 2.  
To flash the lamp or not can be set in the menu.

**5 <SLOT SEL>/<USER 7> button**

Selects the card slot to record to or playback from.  
Also, this is also used as the USER button (USER7).

**6 Rear tally lamp**

Illuminates when the recording is started. Flashes when the battery level becomes low.  
To flash the lamp or not can be set in the menu.

**7 <AUDIO INPUT 1>/<AUDIO INPUT 2> terminal (XLR, 3-pin)**

Connects an audio equipment or an external microphone.

- 8 <HDMI> terminal**  
A terminal to output video signal by connecting a monitor, etc.
- 9 <USB2.0 HOST> terminal**  
Can connect to wireless LAN when the wireless module (optional) compatible to camera is mounted.
- 10 <SERVICE> terminal**  
A maintenance terminal.
- 11 Battery release button**  
Used when removing the battery from the camera.
- 12 Headphone terminal**  
Connects audio monitoring headphones.
- 13 <SDI OUT> terminal**  
A terminal to output SDI signal by connecting a monitor, etc.
- 14 Fan outlet**  
Fan outlet for cooling fan. Do not block this while the camera is being used.
- 15 Battery mounting section**  
Mounts a battery.
- 16 <DC IN 12V> terminal**  
Connects the supplied AC adaptor and supplies an external power supply.
- 17 <TC IN/OUT> terminal**  
Connects to an external equipment and output/input a time code.  
Inputs the standard time code when locking the time code with an external equipment.  
Input and output are set in the [REC SETTINGS] menu → [TC] → [TC IN/OUT SEL].

## Top side

- 1 Shoulder strap mounting section**  
Mounts the included shoulder strap. (page 37)
- 2 Accessory shoe**  
Attaches the video light.
- 3 Accessory mounting holes**  
Mounts the handle and accessory such as the LCD monitor unit.
- Mounting hole size
    - 1/4-20 UNC (screw length 5.5 mm or shorter)
- 4 Handle accessory mounting hole**  
Mounts an accessory to the top of the handle.
- Mounting hole size
    - 1/4-20 UNC (screw length 5.5 mm or shorter)
    - 3/8-16 UNC (screw length 5.5 mm or shorter)

Bottom side

**1 Tripod holes**

Attach the tripod.

• Mounting hole size

- 1/4-20 UNC (screw length 5.5 mm or shorter)
- 3/8-16 UNC (screw length 5.5 mm or shorter)

## LCD monitor unit

**1 LCD monitor hood**

Blocks the light from outside, making it easier to view the LCD monitor.

**2 LCD monitor**

Displays the screen to set the basic setting of the camera and check the status of the camera.

In addition to the HOME screen that is the starting point of the operation, the VIEW screen that displays the recording image, the INFO screen that displays the information of the camera, etc., can be displayed.

Supports the touch operation.

**3 LCD monitor mounting attachment**

Mounts to the LCD monitor mounting section of the handle, etc.

**4 <MIRROR> switch**

Inverts the VIEW screen vertically or both vertically and horizontally.

<OFF>: Does not invert.

<B/T>: Inverts vertically.

<ROTATE>: Inverts vertically and horizontally.

## Grip

The grip is already mounted to the camera.

**1 <EXIT>/<USER 8> button**

Returns to one level higher from the current menu when the menu is displayed. Pressing the <EXIT> button without confirming the setting value will not reflect the change in the setting.

Can be used as the USER button (USER8) while displaying the VIEW screen.

**2 REC button**

Starts or stops the recording.

**3 <MENU> button**

Displays the menu. Pressing the <MENU> button while the menu is displayed closes the menu.

**4 <USER 9> button**

Can be used as the USER button (USER9) while displaying the VIEW screen.

**5 Grip mounting section**

Mounts to the grip mounting section of the camera.

**6 Grip rotation lever**

Pulling to <UNLOCK> side allows to adjust the position of the grip by rotating it.

**7 Grip belt**

Already mounted to the grip.

**8 Grip multidial**

Moves, selects, and sets the menu while the menu is displayed.

Also, this can be used to control the iris of the EF lens.

## Basic operation

### Multidial operation

Operate the multidial on the camera by turning it in vertical direction or pushing it.

- Turning the multidial in vertical direction will move the cursor.
- Pressing the multidial will select or confirm the item with cursor.

#### NOTE

- For details on menu operation method, refer to “When operating with the multidial”.
- The grip multidial operates equally as the multidial on the camera.

### Touch operation of the LCD monitor

The LCD monitor can be operated by directly touching with a finger.

Do not touch the LCD monitor with a pointed hard object such as a ball point pen.

#### ■ Touching

An operation to press and release the LCD monitor. An item or icon can be selected, or an item can be executed.

- To select an icon, touch the center of the icon.
- It will not operate while touching a different location of the LCD monitor.

#### ■ Sliding

An operation to move a finger while touching the LCD monitor. Playback operation such as the skip playback or direct playback, etc. can be performed.

#### ■ Touching and holding

An operation to keep on pressing, then releasing the LCD monitor. Values of the menu or the pages of the thumbnail screen can be changed continuously.

#### NOTE

- For details on menu operation method, refer to “When operating by touching the LCD monitor”.

## Chapter 3 **Preparation**

---

Before you use the camera, mount the battery following the procedures in this chapter. The mounting of accessories is also described in this chapter.

## Power supply

A battery or the supplied AC adaptor can be used as the power supply for the camera.

- The camera is compatible to following batteries. (As of October 2017)
  - AG-VBR59 (supplied/optional, supports quick charging)
  - AG-VBR89 (optional, supports quick charging)
  - AG-VBR118 (optional, supports quick charging)
  - VW-VBD58 (optional)

### Charging the battery

The battery is not charged at the time of purchase. Fully charge the battery in the battery charger before using the battery.

It is recommended that you have one extra battery.

- It is recommended to perform charging of the batter in a location with ambient temperature of 10 °C to 30 °C (same for the battery temperature).
- The supplied AC cable is dedicated for this camera. Do not use with any other device. Also, do not use AC cable from other device on this camera.
- The supplied battery charger can simultaneously charge two batteries. Also, it is compatible with the quick charge battery.

Fig. 1

Fig. 2

Fig. 3

**1** Connect the DC plug of the AC adaptor to the <DC IN 12V> terminal of the battery charger. (Fig. 1)

**2** Connect the AC cable to the AC adaptor. (Fig. 2)

- Insert the AC cable all the way in until it stops.

**3** Connect the power plug to the power outlet. (Fig. 2)

**4** Mount the battery to the battery charger. (Fig. 3)

The charging lamp of the side the mounted battery will illuminate, and the charging will start.

- Place the battery horizontally along the ◀ mark, and slide it.
- Once the charging is completed, the <CHARGE1>/<CHARGE2> lamp (charging lamp) will turn off. Slide the battery and remove it.

#### ■ Display of the <CHARGE1>/<CHARGE2> lamp

<CHARGE1>/<CHARGE2> lamp

The <CHARGE1>/<CHARGE2> lamp (charging lamp) of the supplied battery charger indicates the charging status as follows.

Display of the <CHARGE1>/<CHARGE2> lamp	Charging status
Green (illuminated)	Quick charging
Orange (illuminated)	Normal charging
Orange (flashing)	Stopped charging due to an error
Off	Charging is completed or the battery is not mounted

#### NOTE

- The battery charger will determine the status of the battery after the battery is mounted. Therefore, it may take some time until the charging lamp is to illuminate. Mount the battery again if the charging lamp does not illuminate after ten seconds or longer has elapsed.
- When two quick charging compatible batteries are mounted, the quick charging on the <CHARGE1> side will take priority, and the charging on the <CHARGE2> side will be normal charging. Once the charging of the <CHARGE1> side proceeds, the charging on the <CHARGE2> side will switch to quick charging. Also, depending on the charging status of the battery, the indicator on the battery that is mounted on the <CHARGE2> side may turn off.
- The battery charger will perform optimal charging after determining the status of the battery. Once the charging is started, the indicator for quick charging compatible battery will flash. Also, if it is charging on both <CHARGE1> side and <CHARGE2> side, charging of both batteries will stop when either one of the battery is mounted/removed, or replaced. It will start the charging again after determining the status of the batteries.
- Mount the battery to be charged prioritized on the <CHARGE1> side when charging.

**Standard charging time and recording time**

Battery parts number	Voltage/capacity (minimum)	Charging time	Continuous shootable time
AG-VBR59 (supplied/optional)	7.28 V/5900 mAh	Approx. 3 hours 20 minutes	Approx. 2 hours 50 minutes
AG-VBR89 (optional)	7.28 V/8850 mAh	Approx. 4 hours	Approx. 4 hours 15 minutes
AG-VBR118 (optional)	7.28 V/11800 mAh	Approx. 4 hours 40 minutes	Approx. 5 hours 40 minutes
VW-VBD58 (optional)	7.2 V/5800 mAh	Approx. 5 hours 20 minutes	Approx. 2 hours 40 minutes

- The charging time is the time when charged using the supplied battery charger.
- The charging time is the time when the operating ambient temperature is 25 °C and operating relative humidity is 60%. At other temperature and humidity the charging time may take longer.
- The charging time is the time to charge when the charging capacity of the battery is used up. The charging time or the continuous recordable time differs depending on the use condition such as high or low temperature.
- The continuous recordable time is the time when the camera is used in following condition. If you use the camera in other conditions, continuous shootable time will shorten.
  - Condition where the LCD monitor and the grip are mounted with the factory default menu settings.
  - Condition where the cable is not connected to the external input/output terminal

**NOTE**

- Battery is warm after using or after charging, but this is not a malfunction.
- The battery can be charged with the battery charger AG-B23 (DE-A88) (optional), but it will take longer to charge.

**Checking the remaining battery level**

The remaining battery level can be checked with the power supply status display on the LCD monitor or the indicator on the supplied battery.

**Checking the remaining battery level with the LCD monitor**

The battery status display will change as while the remaining battery level gets lower. It will flash in red when the remaining battery level is zero.

**NOTE**

- The power supply status display may not be displayed depending on the setting in the menu.
- Repair or copy of the clip, or update of the firmware is not possible when it is flashing in red.

**Checking the remaining battery level with the battery**

- The remaining battery level can be checked with the indicator display by pressing the <CHECK> button on the battery when it is not charging.
  - The remaining battery level is a rough indication.
  - The indicator will not illuminate even if the <CHECK> button is pressed when the remaining battery level is zero. Charge the battery.
- The progress of the charging is notified by the flashing position of the indicator while the battery is charging. Once the charging is completed, the indicator turns off.

1 Indicator

2 <CHECK> button

**■ Display of the indicator**

- The color and illuminate/flashing status of the indicator indicated by the icon in the table are as follows.

- : Flashing in green
- : Illuminated in green
- : Off

Indicator display		Remaining battery level/charging progress
When checking the remaining battery level	Charging	
		0% - 25%
		25% - 50%
		50% - 75%
		75% - 100%

- Display of the indicator is a rough indication. If the battery is mounted to the camera or the battery charger, check the remaining level on the device the battery is mounted to. The remaining level may differ from the one displayed with the indicator on the battery.

## Attaching and removing the battery

### Attaching the battery

- 1** Press the battery against the battery mounting section of the camera, and mount it by sliding it downward.
  - Press in the battery until it clicks and gets locked.

### Removing the battery

Battery release button

- 1** Set the power switch to < ⏻ > (standby).
  - Check that the power lamp is turned off.
- 2** While pressing the battery release button on the camera, slide the battery upward and remove it.

## Using the AC adaptor

### Attaching the AC adaptor

Use the supplied AC adaptor. Do not use an AC adaptor for other device.

The supplied AC cable is dedicated for this camera. Do not use with any other device. Also, do not use AC cable from other device on this camera.

Fig. 1

Fig. 2

#### 1 Connect the AC cable to the AC adaptor. (Fig. 1)

- Insert the AC cable all the way in until it stops.

#### 2 Connect the power plug to the power outlet. (Fig. 1)

#### 3 Connect the AC adaptor to the <DC IN 12V> terminal. (Fig. 2)

- When removing the AC adaptor, always set the power switch to <⏻> (standby), and check that the power lamp is turned off before removing.

#### NOTE

- To record with the AC adaptor connected, mount the battery in case there is a power outage or disconnection of the power outlet.
- The power is consumed even when the power switch is set to <⏻> (standby). To prevent power consumption, disconnect the AC adaptor from the power outlet when it is not used for a long period of time.
- The battery charger and the AC adaptor is designed to operate regardless of the country or region in use. This operates with power supply voltage of 100 V-240 V, and power supply frequency of 50 Hz or 60 Hz. However, the shape of the power outlet differs depending on the country or the region. Prepare a plug that fits the shape of the power outlet. Consult the dealer for conversion plug.

## Mounting accessories

### Handle

The handle is already mounted to the camera.

### Mounting the handle

**1** Mount the handle to the accessory mounting holes at the top of the camera body using the handle mounting screws (x 2).

#### NOTE

- Use the handle after securely tightening the handle mounting screws (x 2). Using without securely tightening them may cause the camera to fall due to handle coming off.

### Removing the handle

Remove in the reverse procedure as mounting.

## Grip

The grip is already mounted to the camera.

### Mounting the grip

Mount reference points

Fig. 1

Fig. 2

Fig. 3

#### 1 Insert the grip to the camera. (Fig. 1)

- Align the mount reference points on the grip mounting section of the camera and the grip mounting section of the grip when inserting into the camera.

#### 2 Slowly turn the grip counter-clockwise until it clicks. (Fig. 2)

#### 3 Connect the grip cable to the <REMOTE> terminal. (Fig. 3)

#### 4 Fix the grip cable with the grip cable clamp. (Fig. 3)

#### NOTE

- If it does not mount correctly, perform the mounting from the beginning. Do not apply excessive force to the grip and the camera.
- Store the grip cable inside the grip cable clamp. If it is not stored, the cable may fly out to bottom when the angle of grip is changed, or it may get caught when mounting a tripod.
- Try not to hold the whole camera only with the grip with the total mass of the whole camera has increased by attaching multiple accessories to the camera main body. The grip may get damaged.

■ Adjusting the angle of the grip

**1** Pull the grip rotation lever to the <UNLOCK> side.

**2** Adjust the angle of the grip, and return the grip rotation lever at the position to fix.

The grip is fixed.

- The grip can be fixed in 8 different positions.

■ Adjusting the grip belt

The grip belt is already mounted to the grip.

**1** Open the cover and adjust the length of the belt.

**2** Replace the cover.

## Removing the grip

- 1** Remove the grip cable from the grip cable clamp.
- 2** Remove the grip cable from the <REMOTE> terminal.
- 3** While pressing the <GRIP RELEASE> button on the camera, turn the grip clockwise.

### NOTE

- Remove the grip after placing the camera body on a level location, such as desk.

## LCD monitor unit

## Mounting the LCD monitor unit

Mount the supplied LCD monitor unit to the LCD monitor mounting section.

Fig. 1

Fig. 2

Fig. 3

**1** Insert the supplied LCD monitor mounting attachment to the LCD monitor unit mounting section of the handle. (Fig. 1)

- This can also be mounted to the accessory mounting holes at the top of the camera.

**2** Tighten the supplied screw by turning clockwise.

**3** Open the terminal cover of the <LCD> terminal, and connect the LCD monitor unit cable to the <LCD> terminal. (Fig. 2)

- Connect by aligning ▲ of the <LCD> terminal with ▼ of the LCD monitor unit cable connection terminal.
- Connect after confirming that ▼ of the LCD monitor unit cable connection terminal is facing outward.

**4** Attach the LCD monitor unit cable to the LCD monitor cable clamp. (Fig. 3)

■ Adjusting the angle of the LCD monitor

The LCD monitor can be turned vertically and horizontally to adjust to easily viewable angle.

The VIEW screen can be inverted vertically or inverted vertically and horizontally by the <MIRROR> switch allowing the mirror shooting, etc.

It is recommended to close the LCD monitor to protect the LCD monitor when the camera is not used or to be carried.

**Removing the LCD monitor unit**

**1** Remove in the reverse procedure as mounting.

**NOTE**

- To disconnect the LCD monitor unit cable, pull out while pressing on the lock buttons on both sides of the cable connection terminal (▼).

**LCD monitor hood**

The LCD monitor hood is already mounted to the LCD monitor unit.

**Removing the LCD monitor hood**

**1** Remove the LCD monitor hood while pushing in your nails into the gaps of the tabs (2 locations) at the upper of the LCD monitor hood.

The LCD monitor hood is removed.

**Opening and closing of the LCD monitor hood**

**NOTE**

- Close the LCD monitor hood to protect the LCD monitor when the LCD monitor unit is not used.

**Mounting the LCD monitor hood**

- 1** Align the tabs at the top of the LCD monitor hood (2 locations) to the dimples at the top of the LCD monitor unit.
- 2** Align the tabs at the bottom of the LCD monitor hood (2 locations) to the dimples at the bottom of the LCD monitor unit.

**Attaching the shoulder strap**

Mount the supplied shoulder strap to the shoulder strap mounting section.

**NOTE**

- Make sure that the shoulder strap is securely attached.

## Mounting the external microphone

External microphone such as the super-directional microphone AG-MC200G (optional) can be mounted onto the handle.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

- 1** Mount the supplied microphone holder adaptor to the microphone mounting section of the camera. (Fig. 1)
  - Tighten the screw included with the microphone holder adaptor.
- 2** Mount the included microphone holder to the microphone holder adaptor using the microphone holder screws (x 2). (Fig. 2)
- 3** Mount the external microphone and tighten the screw on the microphone holder. (Fig. 3)
- 4** Connect the microphone cable to the <AUDIO INPUT 1> terminal. (Fig. 4)
- 5** Attach the microphone cable to the microphone cable clamp. (Fig. 4)

### NOTE

- Remove the microphone cable from the <AUDIO INPUT 1> terminal while pushing the lever.

## Mounting the lens

Mount/remove the lens in a location away from direct sunlight or intense lighting.

Take care not to drop the camera or the lens.

Prevent dirt or dust from entering into the EF lens mount.

Fig. 1

Fig. 2

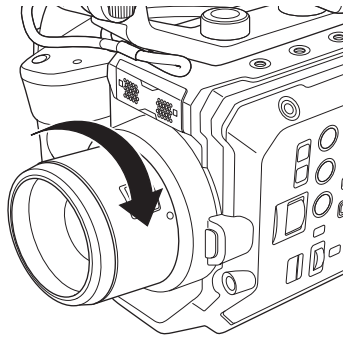

Fig. 3

- 1** Set the power switch to < ⏻ > (standby).
  - Check that the power lamp is turned off.
- 2** Remove the mount cap. (Fig. 1)
  - Turn the mount cap counter-clockwise until the marking on the mount cap is at the top, and remove the camera body.
- 3** Insert the lens into the EF lens mount with the mark on the lens (red dot) facing up. (Fig. 2)
- 4** Turn the lens clockwise until it clicks. (Fig. 3)

## Removing the lens

Lens lock unlock button

- 1** Set the power switch to < ⏻ > (standby).
  - Check that the power lamp is turned off.
- 2** While pressing the lens unlock button, turn the lens counter-clockwise all the way and remove it.
- 3** Attach the mount cap to the EF lens mount.

- Mount the mount cap turning in clockwise direction with the mark on the mount cap at the top.

 **NOTE**

- Do not touch the EF lens mount and inside the EF lens mount.
- Attach the mount cap to the EF lens mount. Use the mount cap after removing dirt and dust.

### Attaching a tripod

The tripod attachment holes accept 1/4-20 UNC and 3/8-16 UNC screws. Use the hole that matches the diameter of the clamping screw on the tripod.

 **NOTE**

- Use a tripod in safe locations.
- The depth of the tripod attachment hole is 5.5 mm. Do not over-tighten the tripod screw when mounting the camera to a tripod.

## Turning on/off the power

Power switch

### How to turn on the power

#### 1 Set the power switch to <|> (ON).

The power lamp will illuminate in red when the power is on.

- The [TIME ZONE] screen, and then the [CLOCK SETTING] screen are displayed in sequence when the power is turned on for the first time. Set the time zone, date, and time.

#### NOTE

- The internal battery (rechargeable battery) will discharge. The setting for date/time may be initialized when the camera is not turned on for approximately two months. Set the date/time again after charging the built-in battery. (page 42)
- The power lamp will not illuminate or flash when the [SYSTEM SETTINGS] menu → [LED & FAN] → [POWER LED] → [OFF] is set. However, it will illuminate for approximately 1 second during startup.

### How to turn off the power

#### 1 Set the power switch to <⏻> (standby).

The power lamp will turn off.

## Charging the built-in battery

---

The date/time set in the camera is maintained by the built-in battery.

The built-in battery may exhaust when the camera is not turned on for approximately two months.

The built-in battery is exhausted when [BACKUP BATT EMPTY] is displayed on the LCD monitor when the power switch is set to < | > (ON).

Charge the built-in battery with the following procedure.

**1 Set the power switch to < ⏻ > (standby).**

**2 Connect a fully charged battery or the AC adaptor to the camera.**

For details on connection of a battery or the AC adaptor, refer to “Power supply”.

**3 Leave the camera for approx. 24 hours.**

The built-in battery will be charged.

The built-in battery is charged even when the power switch is set to < | > (ON).

- Check the date/time setting and the time code after charging.
- Select [DIAGNOSTICS] in the INFO screen, and set the date/time for the internal clock if [INTERNAL CLOCK HAS RESET] [< PLEASE SET TO CORRECT TIME>] is displayed in the warning display field.

**4 Set the power switch to < | > (ON), and check that [BACKUP BATT EMPTY] is not displayed in the LCD monitor.**

If [BACKUP BATT EMPTY] is still displayed after charging, the built-in battery needs to be replaced. Consult your dealer.

## Setting the date/time of the internal clock

The date/time/time zone are recorded as meta data in the clip while shooting.

It will affect the management of the recorded contents, so always check and set the date/time and time zone before using the camera for the first time.

Do not change the setting of the date/time and time zone while shooting.

### 1 Press the <MENU> button.

The menu is displayed.

### 2 Select the [SYSTEM SETTINGS] menu → [CLOCK] → [TIME ZONE], and set the time difference from Greenwich Mean Time.

### 3 Select the [SYSTEM SETTINGS] menu → [CLOCK] → [CLOCK SETTING], and set the year, month, date, and time.

#### NOTE

- Accuracy of the clock is approximately  $\pm 30$  seconds per month. Check and reset the time when accurate time is required.
- In the AVCHD format, clip will be save in +12:30 even selecting +12:45 due to format standards.

#### ■ Time zone table

Time difference	Region	Time difference	Region
00:00	Greenwich	+01:00	Central Europe
-00:30		+01:30	
-01:00	Azores	+02:00	Eastern Europe
-01:30		+02:30	
-02:00	Mid-Atlantic	+03:00	Moscow
-02:30		+03:30	Tehran
-03:00	Buenos Aires	+04:00	Abu Dhabi
-03:30	Newfoundland	+04:30	Kabul
-04:00	Halifax	+05:00	Islamabad
-04:30	Caracas	+05:30	Mumbai
-05:00	New York	+06:00	Dakar
-05:30		+06:30	Yangon
-06:00	Chicago	+07:00	Bangkok
-06:30		+07:30	
-07:00	Denver	+08:00	Beijing
-07:30		+08:30	
-08:00	Los Angeles	+09:00	Tokyo
-08:30		+09:30	Darwin
-09:00	Alaska	+10:00	Guam
-09:30	Marquesas Islands	+10:30	Lord Howe Island
-10:00	Hawaii	+11:00	Solomon Islands
-10:30		+11:30	
-11:00	Midway Islands	+12:00	New Zealand
-11:30		+12:45	Chatham Islands
-12:00	Kwajalein Atoll	+13:00	Phoenix Islands
+00:30			

## Preparing the SD card

### SD cards supported on the camera

Following SD cards can be used with the camera. (As of October 2017)

Type of the SD card	Recording capacity
SDHC memory card	4 GB - 32 GB
SDXC memory card	48 GB - 128 GB

- Operation is not guaranteed for any SD cards other than above.
- It is recommended to use the Panasonic SD card.
- Following SD cards cannot be used since they are not compliant with the SD standards.
  - SD card with 4 GB or larger without SDHC logo display
  - SD card with 48 GB or larger without SDXC logo display

### Speed Class during shooting

The SD card to be used differs depending on the recording mode and the recording format.

Use the SD card compatible to the Speed Class, UHS Speed Class, or Video Speed Class.

The recording may stop suddenly when the SD card not compatible to required Speed Class is used.

- Speed Class, UHS Speed Class, and Video Speed Class are the speed specification regarding continuous writing. It can be checked at the display on the SD card label, etc.

#### ■ When the recording mode is MOV

SDXC memory card can be used.

Recording bit rate or recording function	Speed Class	Example of card display
400 Mbps 2K/FHD VFR ALL-I (Variable frame rate recording)	Video Speed Class V60 or higher	V60
200 Mbps 150 Mbps 100 Mbps 2K/FHD VFR LongGOP (Variable frame rate recording)	Video Speed Class V30 or higher, UHS Speed Class 3 or higher	V30 U3
50 Mbps	Video Speed Class V10 or higher, UHS Speed Class 1 or higher, Speed Class 10 or higher	V10 U1 CLASS10 10

#### ■ When the recording mode is AVCHD

SDHC memory card and SDXC memory card can be used.

Recording bit rate or recording function	Speed Class	Example of card display
All	Speed Class 4 or higher	CLASS4 4

### Preventing mistaken erasing

Writing, erasing of data, and formatting will be prohibited by setting the lock switch on the SD card is set to the LOCK side.

### Status of the card access lamp and SD card

Card access lamp	SD card status	
Orange (illuminated)	Recording target	Both reading/writing are permitted. Current recording target.
Green (illuminated)	Recording possible	Both reading/writing are permitted.
Orange (flashing)	Accessing card	Reading/writing are currently being performed.

Card access lamp	SD card status	
Orange (rapidly flashing)	Recognizing the SD card	The SD card is being recognized.
	Error	An error has occurred. This will flash even if the SD card is not inserted when an error has occurred.
Green (slowly flashing)	No remaining recordable capacity	There is no more SD card recording capacity. Only reading is possible.
	Write-protected	The lock switch of the SD card is set to the LOCK side.
	Recording not possible	It cannot record with the recording format that is currently set. To record, change the recording format or use the SD card compatible with the recording format.
Off	SD card not inserted	SD card is not inserted.
	Illegal format	It is not the correct format. Reformat the card.
	Card not supported	This is a card that cannot be used with the camera, such as MMC (Multi Media Card).

**NOTE**

- The card access lamp will not illuminate or flash when the [SYSTEM SETTINGS] menu → [LED & FAN] → [ACCESS LED] → [OFF] is set.
- The card access lamp will not illuminate or flash when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**Inserting/removing of the SD card**

**Inserting the SD card**

The SD card to be used on the camera should always be formatted on the camera. (page 46)

- All the recorded data will be erased and would not be able to restore when the SD card is formatted.

**1** Open the card slot cover. (Fig. 1)

**2** Insert the SD card into the card slot. (Fig. 2)

- The card slot 1 and the card slot 2 can each insert one SD card.
- Insert straight in with the label facing left until it clicks.

**3** Close the card slot cover.

**Removing the SD card**

**1** Open the card slot cover.

- Confirm that the card access lamp is not flashing in orange.
- Data is being written/read when the card access lamp is flashing in orange, so do not remove the SD card.

**2** Press in the SD card further into the camera and let go.

- The SD card is released from the card slot, and pull it out straight.

**3** Close the card slot cover.

**Cautions when using or storing**

- Do not touch the terminal section at the rear of the SD card.
- Avoid high temperature and humidity.
- Avoid water droplets.

- Avoid charging with electricity.
- Use or store the SD card with the card inserted into the camera and with the slot cover closed.

## Formatting the SD card

- 1 Select the [REC SETTINGS] menu → [CARDS/MEDIA] → [FORMAT MEDIA] → [SLOT1]/[SLOT2].
- 2 When the confirmation message is displayed, select [SET].
- 3 When the completion message is displayed, select .

### NOTE

- This function can be operated also by touching the LCD monitor.
- It may take few seconds after closing the completion message until it can record.

## Recording time of the SD card

### When the recording mode is MOV

64 GB or larger SDXC memory card is required. SDHC memory card cannot be used.

Recording format	Recording rate	Recording capacity	
		64 GB	128 GB
4K	400 Mbps	Approx. 20 minutes	Approx. 40 minutes
	150 Mbps	Approx. 55 minutes	Approx. 1 hour 50 minutes
	100 Mbps	Approx. 1 hour 20 minutes	Approx. 2 hours 40 minutes
UHD	400 Mbps	Approx. 20 minutes	Approx. 40 minutes
	150 Mbps	Approx. 55 minutes	Approx. 1 hour 50 minutes
	100 Mbps	Approx. 1 hour 20 minutes	Approx. 2 hours 40 minutes
2K	200 Mbps	Approx. 40 minutes	Approx. 1 hour 20 minutes
	100 Mbps	Approx. 1 hour 20 minutes	Approx. 2 hours 40 minutes
	50 Mbps	Approx. 2 hours 40 minutes	Approx. 5 hours 20 minutes
FHD	200 Mbps	Approx. 40 minutes	Approx. 1 hour 20 minutes
	100 Mbps	Approx. 1 hour 20 minutes	Approx. 2 hours 40 minutes
	50 Mbps	Approx. 2 hours 40 minutes	Approx. 5 hours 20 minutes

### NOTE

- The recording time will change depending on the set variable frame rate in the variable frame rate recording.
- File is split approximately every three hours for the data in MOV format. These are displayed as separate clips in the thumbnail screen. Also, the clips recorded across two SD cards by the relay recording are displayed as separate clips.
- The recording is stopped once when the recording time reaches ten hours, and recording is automatically resumed after few seconds. Image and audio during the pause will not be recorded. This includes the case of special recording, such as variable frame rate recording or relay recording. When performing high-speed shooting with the variable frame rate recording, the recording time will be shorter than 10 hours depending on the ratio of the frame rate of the recording format and the variable frame rate. The recording will stop in 5 hours when [FREQUENCY] is set to [24.00p], and [FPS] is set to [48fps].
- In the interval recording, the recording is stopped once when the length of a clip reaches ten hours, and recording is automatically resumed after few seconds.

### When the recording mode is AVCHD

SDHC memory card and SDXC memory card can be used.

#### ■ For SDHC memory card

Recording format	Recording rate	Recording capacity			
		4 GB	8 GB	16 GB	32 GB
PS	25 Mbps	Approx. 19 minutes	Approx. 40 minutes	Approx. 1 hour 20 minutes	Approx. 2 hours 40 minutes
PH	21 Mbps	Approx. 21 minutes	Approx. 46 minutes	Approx. 1 hour 30 minutes	Approx. 3 hours
HA	17 Mbps	Approx. 30 minutes	Approx. 1 hour	Approx. 2 hours	Approx. 4 hours 10 minutes
PM	8 Mbps	Approx. 1 hour	Approx. 2 hours	Approx. 4 hours 15 minutes	Approx. 8 hours 30 minutes

#### ■ For SDXC memory card

Recording format	Recording rate	Recording capacity	
		64 GB	128 GB
PS	25 Mbps	Approx. 5 hours 20 minutes	Approx. 11 hours

Recording format	Recording rate	Recording capacity	
		64 GB	128 GB
PH	21 Mbps	Approx. 6 hours	Approx. 12 hours 30 minutes
HA	17 Mbps	Approx. 8 hours 30 minutes	Approx. 17 hours
PM	8 Mbps	Approx. 17 hours 10 minutes	Approx. 35 hours

**NOTE**

- File is split approximately every 4 GB for the data in AVCHD format. These are displayed as one clip in the thumbnail screen. However, the clips recorded across two SD cards by the relay recording are displayed as separate clips.
- The recording is stopped once when the recording time reaches ten hours, and recording is automatically resumed after few seconds. Image and audio during the pause will not be recorded. This includes the case of special recording, such as relay recording.
- Protection by DVD recorders will be automatically removed from SD cards that are AVCHD protected.

**Handling of the recording data**

**Example of folder structure of SD card**

- 1 SD card volume label
- 2 Video data in MOV format: 4K (4096×2160), 59.94P MOV (audio: LPCM)
- 3 Video data in MOV format: UHD (3840×2160), 29.97P MOV (audio: LPCM)
- 4 Management file 1
- 5 Management file 2
- 6 Thumbnail of video data
- 7 Video data in AVCHD standard (00000.MTS, etc.)

**8 Management folder**

The recording data in MOV format is related with the folder structure and the management files as shown in the figure. If these information is changed or deleted even partially, an error such as that the data may not be recognized as the MOV data, or the recording becomes impossible will occur. AVCHD formatted recording data includes not only video and audio data, but also various important data, and they are related in a folder structure as shown in the figure. If such information is changed or deleted even partially, an error may occur, such as that the data may not be recognized as the AVCHD data, or the SD card may not be used on the AVCHD device.

**NOTE**

- Do not erase the folder or file in the SD card with a PC. It may make it impossible to read on the camera.
- An error may occur such as that the SD card will not be recognized or data will not be recorded in the SD card when data is recorded in the SD card by a PC.
- The SD card to be used on the camera should always be formatted on the camera.
- Number of the AVCHD format clips that can be recorded on a single SD card is approximately 3900. Data will not be able to record when it reaches the maximum number of data that can be recorded.

**Volume label of the SD card**

The value set in the [REC SETTINGS] menu → [CLIP NAME] is stored in the volume label in CAM INDEX + NEXT REEL COUNT format when the SD is formatted. Once it is stored, [NEXT REEL COUNT] will increase by one. Stored REEL COUNT is also used for the REEL number of the MOV format file name.

**NOTE**

- When recorded to the SD card with CAM INDEX+REEL COUNT not recorded in the volume label, the value set in the [REC SETTINGS] menu → [CLIP NAME] is automatically stored in the volume label, and [NEXT REEL COUNT] will increase by one.

**Folder name of the MOV format video data**

The fourth through eighth characters of the folder name differ depending on the setting of the camera.

**1 Folder number**

001 to 999 (sequential number)

- The number of clips that can be recorded in one folder is 999. Once it reaches 999, a folder with sequential number added is newly created. Also, a folder with sequential number added is newly created when the folder name is changed by changing the setting of the camera. The folder name will return to 001 when the SD card is formatted.

**2 Number of pixels**

- Q: 4096×2160
- R: 3840×2160
- P: 2048×1080
- Y: 1920×1080

**3 Frame rate**

- A: 59.94fps
- B: 50.00fps
- C: 29.97fps
- D: 25.00fps
- E: 24.00fps
- F: 23.98fps

**4 Video format**

- Q: Progressive recording (MOV, LPCM)
- J: Interlace recording (MOV, LPCM)

**5 Fixed values**

A

**6 Recording setting**

- M: Standard recording (card slot 1 for simultaneous recording)
- T: Simultaneous recording (card slot 2 for simultaneous recording)

**7 Recording format information**

■ **When the folder name is 001QAQAM**

Following video data is saved in the folder.

- Number of pixels: 4096×2160
- Frame rate: 59.94fps
- Video format: Progressive recording (MOV, LPCM)

**File name of the MOV format video data**

The file name format is the same as Panasonic VARICAM series (AU-V35LT1G, etc) CINE format.

Clip can be managed in the same manner as VARICAM.

**1 CAM INDEX**

One character from upper case A to Z.

- An INDEX assigned to each camera. Set with the [REC SETTINGS] menu → [CLIP NAME] → [CAM INDEX].

**2 REEL number**

001 - 999

- A number assigned for each SD card. The REEL COUNT stored in the volume label of the SD card is assigned.

**3 Clip number**

C001 - C999

- A sequential number assigned to each record on the SD card. It will return to C001 when the SD card is formatted. It will also return to C001 for the one after C999.

The clip number is maintained even when the folder is split or when the clip is deleted.

**4 Date**

Last two digits of year + two digits of month + two digits of date when the recording is started.

**5 Hashtag generated from the serial number**

Four-digit number or alphabet

**NOTE**

- The clip name of the card slot 2 will be the same as the clip name of the card slot 1 for the simultaneous recording.
- The maximum number of folder and the folder number is 999. The recording is prohibited when it reaches 999 even if number in between is open.

- Number of clips that can be recorded on a single SD card is approximately 4000. Data will not be able to record when it reaches the maximum number of clips that can be recorded even if number in between is open.

## Setting of time data

The camera provides time code, user bits, and date and time (real time) data as time data, and records in each frame synchronized with the video. The time data is also recorded as the clip meta data.

### Definition of time data

#### ■ Time code

[FREE RUN] and [REC RUN] can be switched with the [REC SETTINGS] menu → [TC] → [FREE/REC RUN].

- **[FREE RUN]:** Advances regardless of the operation mode. It is advancing even when the power is turned off, so it can be treated equally as time. It can also be recorded to the time code input to the <TC IN/OUT> terminal using slave lock.
- **[REC RUN]:** Advances only while recording. Recording is started with the value continuing from the last time code recorded previously.

#### NOTE

- The [REC RUN] will not be a continuous value for following cases.
  - When deleting recorded clips
  - When recording is interrupted due to a malfunction of [REC WARNING], etc. during recording.
- It will be fixed to [FREE RUN] when pre-recording is enabled.
- It will be fixed to [REC RUN] when the variable frame rate recording function is enabled.
- It will be fixed to [REC RUN] when the interval recording function is enabled.

#### ■ User bits

User bits are built-in. User bits are recorded in the clip. Also, it is output as LTC UB, VITC UB of the SDI signal.

The user setting value, time, date, frame rate information during shooting, or clip name can be selected for recording.

The value at the time when the recording has started is recorded in the user bits of the clip meta data.

#### ■ Duration (clip length) counter

This counter counts from 0 each time recording starts. The duration of the recorded clip is displayed after recording.

#### ■ Date/time (real time)

- The internal clock will be the reference for the measurement of the free run time code while the power is set to <⏻> (standby), time of the user bits, and date data. Also, it will be the reference for the file generation time and file name when the clip is recorded.

#### NOTE

- The display in the VIEW screen and the HOME screen is switched with the [REC SETTINGS] menu → [TC] → [TC/UB/Dur.].

### User bits settings

Set the user bits to be recorded.

#### 1 From the [REC SETTINGS] menu → [TC] → [UB MODE], select the user bits to be recorded.

[FRAME RATE]	Records the frame rate information of the shooting. Use with this setting when using the frame rate information of the user bits with an editing device such as a PC. Use this setting to control the recording operation in TYPE1 or TYPE2 method against the Panasonic recorder (AJ-PG50, etc.).
[USER]	Records the user bits set in the [REC SETTINGS] menu → [TC] → [SET UB]. The setting value is maintained even when the power is set to <⏻> (standby). For details, refer to "How to input user bits".
[TIME]	Records the hour, minute, and second of the date and time measured with the internal clock.
[DATE]	Records the last two digits of year, month, date, and hour of the date and time measured with the internal clock.
[CLIP NAME]	Records the value that CAM INDEX (one character) and REEL COUNT (three-digit number) both converted to ASCII character code.

### How to input user bits

By setting user bits, information such as memos (date, time) up to eight digits long (hexadecimal) can be recorded.

#### 1 Select the [REC SETTINGS] menu → [TC] → [UB MODE] → [USER].

#### 2 Select the [REC SETTINGS] menu → [TC] → [SET UB].

The user bits setting screen is displayed.

#### 3 Set the user bits.

- Set two digits each.

#### 4 Confirm the setting value of the user bits.

- The setting value is confirmed when last two digits are set.

### Memory function of the user bits

Setting contents of the user bits is automatically recorded, and it is maintained even if the power is set to <⏻> (standby).

### Frame rate information

The relationship between frame rate, image pull-down, time code, and user bits is as follows.

### ■ Camera video mode

The display of the camera video mode differs depending on the setting of following menus.

- The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]
- The [CAMERA SETTINGS] menu → [FPS] → [VFR SW]

[FREQUENCY]	Display of camera video mode	
	When [VFR SW] is set to [ON]	When [VFR SW] is set to [OFF], or [VFR SW] is set to [ON] and the frame rate is same as [FREQUENCY]
[23.98p]	D	C
[24.00p]	F	E
[29.97p]	9	8
[59.94p]	9	8
[25.00p]	8	A
[50.00p]	8	A
[59.94i]	—	0
[50.00i]	—	2

### Setting the time code

**1** Select the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] → [59.94i]/[59.94p]/[29.97p].

**2** Select the [REC SETTINGS] menu → [TC] → [DF/NDF] → [DF]/[NDF].

[DF]: Advances the time code in the drop frame mode.

[NDF]: Advances the time code in the non-drop frame mode.

**3** Select the [REC SETTINGS] menu → [TC] → [SET TC].

The [SET TC] screen is displayed.

**4** Set the time code.

**5** Confirm the setting value of the time code.

- The setting value is confirmed when last two digits are set.

### ■ Setting range of time code

The range of time code that can be set differs depending on [FREQUENCY].

[FREQUENCY]	Range of the time code that can be set
59.94p, 29.97p, 59.94i	00:00:00:00 - 23:59:59:29
23.98p, 24.00p	00:00:00:00 - 23:59:59:23
50.00p, 25.00p, 50.00i	00:00:00:00 - 23:59:59:24

### NOTE

- The set change is not reflected if the time code setting screen is closed without confirming the setting value.
- Set the number of frames with the value that is multiple of four when [FREQUENCY] is set to 23.98p or 24.00p. The recorded time code will shift with any other value.

### Time code function during battery replacement

The operation of the time code generator will continue by the backup mechanism functioning even when replacing the battery.

The time code of the free run may shift when any item in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] is changed. Set the power to <⏻> (ON) again, confirm the time code, and set it again if necessary.

### Time code with variable frame rate record

The time code is fixed to [REC RUN] when the variable frame rate recording function is set to enable. The time code will advance in the speed corresponding to the ratio setting values of [FREQUENCY] (system frequency) and [FPS] (frame rate).

As an example, the time frame will advance 60/24 frames (two seconds 12 frames) per second when [FREQUENCY] is set to [24.00p] and [FPS] is set to [60fps].

- The time code output from the <TC IN/OUT> terminal or the <SDI OUT> terminal is advanced in 1x speed from the exact start of recording.

### Presetting the time code to external

The internal time code generator of the camera can be slave locked in a simplified manner to an external generator.

### Connection example of the camera and an external generator

Connect the reference time code to the <TC IN/OUT> terminal.

### External lock

Externally lock the time code.

- Connect the camera to an external generator in advance.

**1** Select the [REC SETTINGS] menu → [TC] → [FREE/REC RUN] → [FREE RUN].

**2** Select the [REC SETTINGS] menu → [TC] → [TC IN/OUT SEL] → [TC IN].

**3** Enter the external time code to the <TC IN/OUT> terminal.

[TC] in the HOME screen and the VIEW screen will be displayed in black and white inversion.

Enter the time code matching the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] as the reference time code.

Also, enter the time code of the non-drop frame for 23.98p, 24.00p, 25.00p, 50.00p, and 50.00i.

#### NOTE

- Do not slave lock to the externally input time code but automatically advance with internal reference during recording or rec remote controlling of the external recording device.  
The time code value may overlap or drop out after recording or ending rec remote due to performing slave lock to the time code input from external.
- Since this camera does not have a genlock system, the time code may shift one frame.
- Once the slave lock is performed, it will maintain the slave lock status even when the input from the <TC IN/OUT> terminal is gone. However, the slave lock status will be cleared in following cases.
  - When the time code is set in [SET TC]
  - When the power is turned off
  - When switched [DF]/[NDF]
  - When set to [REC RUN]
  - When the variable frame rate recording function is enabled
- The pre-recording will be discarded once when the slave lock is performed during pre-recording.
- The number of frames for the record start time code may not be multiple of four when [FREQUENCY] is set to 23.98p or 24.00p.
- External locks by user bits are not supported.

### Cautions when switching the power supply from the battery to the AC adaptor while an external lock is active

To maintain the continuity of the time code generator power, remove the battery only after that the power status display in the HOME screen has changed to  after connecting the AC adaptor to the <DC IN 12V> terminal. The continuity of the external lock of the time code is not guaranteed when the battery is removed first.

## Supplying the time code externally

The time code output from the camera corresponding to the camera video or the playback video can be supplied to an external recording device.

**1** Select the [REC SETTINGS] menu → [TC] → [TC IN/OUT SEL] → [TC OUT].

**2** Select the [REC SETTINGS] menu → [TC] → [TC OUT REF] → [RECORDING].

The same time code can be recorded to the video of the same time on two devices.

■ To match the time code output from the <TC IN/OUT> terminal to the video of the SDI output or the monitor output

**1** Select the [REC SETTINGS] menu → [TC] → [TC OUT REF] → [SDI OUT].

### NOTE

- TCR is output during playback. TCG output during playback is not supported.
- When [FREQUENCY] is [23.98p] or [24.00p], time code output may be off by 1 frame.
- External locks by user bits are not supported.

## Assigning function to the USER buttons

Selected function can be assigned to the USER buttons.

- The buttons that can be used as a USER button are as follows.
  - <USER 1> to <USER 9> buttons  
These can be used as the USER buttons when the VIEW screen is displayed.
  - Multidial (when <WB>/<USER>/<ISO/dB> switch is set to <USER>)

**1** From the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] or [USER TOGGLE], select the function to assign to each.

### ■ Functions assigned to the USER buttons in the factory setting

USER button	Function
<USER 1> button	[ONE PUSH AF]
<USER 2> button	[PEAK./SQUARES F.A.]
<USER 3> button	[SPOT METER]
<USER 4> button	[E.I.S.]
<USER 5> button	[WFM]
<USER 6> button	[AWB]
<USER 7> button	[SLOT SEL]
<USER 8> button	[EXPAND]
<USER 9> button	[OPEN IRIS F.A.]
Multidial	[MONITOR VOL]

## Functions assigned to USER buttons

### Function assigned to <USER 1> to <USER 9> buttons

Item	Description
[INHIBIT]	Disables assignment of functions.
[AWB]	Enables/disables the auto white balance.
[ONE PUSH AF]	Assigns the one-push auto focus function.
[ONE PUSH A.IRIS]	Assigns the one-push auto iris function.
[ATW LOCK]	Fixes the value of the white balance. Pressing the USER button again will resume the operation of the auto tracking white balance. <ul style="list-style-type: none"> <li>• Enable when the auto tracking white balance is operating.</li> </ul>
[E.I.S.]	Enables/disables the electronic image stabilization function.
[D.ZOOM]	Enables/disables the digital zoom. It will zoom the angle of view 1.4 times both vertically and horizontally.
[IR SHOOTING]	Enables/disables the IR recording.
[REC SW]	Starts or stops the recording.
[PRE REC]	Enables/disables the pre-recording.
[REC CHECK]	Automatically plays back the last approximately three seconds of the previously shot clip.
[DEL LAST CLIP]	Deletes the clip last shot.
[SLOT SEL]	Selects the card slot with the SD card to record inserted. Or, switches the card slot for the clip to display in the thumbnail screen.
[EXPAND]	Enables/disables the enlarged display function (focus assist function).
[OPEN IRIS F.A.]	Assigns the open iris focus assist function (focus assist function).
[PEAK./SQUARES F.A.]	Enables/disables the peaking function and focus square display (focus assist function). The display is selected in the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [PEAK./SQUARES MODE].
[WFM]	Switches the display of the waveform monitor. The waveform display is selected in the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [WFM MODE].
[SPOT METER]	Displays/hides the spot meter. This is enabled when the [OUTPUT SETTINGS] menu → [SDI/HDMI INDICATOR]/[LCD INDICATOR] → [SPOT METER] → [ON] is set.
[ZEBRA]	Displays/hides zebra patterns.
[LEVEL GAUGE]	Displays/hides the level gauge.
[LEVEL GAUGE SET]	Sets the current horizontal and vertical direction as the reference value of the level gauge.
[SDI COLOR]	Switches the output image from the <SDI OUT> terminal.
[HDMI COLOR]	Switches the output image from the <HDMI> terminal.
[LCD COLOR]	Switches the output image from the <LCD> terminal.
[LCD CLEAN VIEW]	Erases the display of the indicator or marker superimposed to the output video from the <LCD> terminal.
[LCD MARKER]	Displays/hides the marker superimposed in the output video from the <LCD> terminal.
[COLOR BARS]	Displays/hides the color bars.
[POWER LCD]	Make it easier to view the LCD monitor in a well-lighted area such as outdoor.

**NOTE**

- Following functions will be disabled when the camera is set to <⏻> (standby) and then turned on again.  
[ATW LOCK], [D.ZOOM], [EXPAND], [PEAK./SQUARES F.A.], [WFM], [SPOT METER], [LCD CLEAN VIEW], [COLOR BARS], [POWER LCD]
- Following functions will be enabled when the camera is set to <⏻> (standby) and then turned on again.  
[LCD MARKER]

**Functions assigned to the multial**

When <WB>/<USER>/<ISO/dB> switch is set to <USER>, the multial can be used as a USER button.

- The operation as the USER button is enabled when the VIEW screen is displayed.

Item	Description
[INHIBIT]	Disables assignment of functions.
[SHUTTER]	Enables/disables the shutter function when the multial is pressed. The setting value of the shutter speed can be selected by turning the multial.
[FPS]	Enables/disables the variable frame rate record function when the multial is pressed. The setting value of the frame rate can be selected by turning the multial.
[MONITOR VOL]	The adjustment of the audio level output from the headphones terminal is enabled when the multial is pressed. The level meter for adjusting is displayed in the LCD monitor when it is enabled. The level of the audio can be adjusted by turning the multial. Level adjustment of audio is ended by pressing the multial again.

**Checking the function assigned to the USER buttons****1 Press the <HOME> button.**

The HOME screen is displayed.

**2 Press the <INFO> button.**

The INFO screen is displayed.

**3 Select [SWITCHES].**

The function assigned to each USER button is displayed.

- In addition to operating with the multial and touch operations, the function can be selected by pressing the <INFO> button.

DIAGNOSTICS	SWITCHES	VERSION
1 : ONE PUSH AF	4 : E.I.S.	
2 : PEAK./SQUARES F.A.	5 : WFM	
3 : SPOT METER	6 : AWB	
TOGGLE : INHIBIT	7 : SLOT SEL	
8 : EXPAND		
9 : OPEN IRIS F.A.		
NETWORK	AUDIO	MEDIA

## Tally lamp

---

The front tally lamp and the rear tally lamp can be illuminated during the shooting.

**1** Select the [SYSTEM SETTINGS] menu → [LED & FAN] → [TALLY LED] → [FRONT]/[REAR]/[BOTH].

- The tally lamp will flash when the camera is in the following status.
  - When the remaining capacity of the SD card or the remaining battery level is low (one time per second)
  - The SD card has no more space to record (four times per second)
  - When a warning such as a system error or a recording abnormality has occurred (four times per second)

 **NOTE**

---

- The tally lamp will not illuminate or flash when the [SYSTEM SETTINGS] menu → [LED & FAN] → [TALLY LED] → [OFF] is set.

## Chapter 4 **Operation**

---

This chapter describes how to operate the screen of this camera, how to operate the menu, the structure of the menu, and details of the menu.

## Basic operation of the screen

### Major button operation and screen display

1 <VIEW> button

2 <INFO> button

3 <THUMBNAIL> button

4 <HOME> button

#### ■ <VIEW> button

Displays the VIEW screen.

Displays the shooting screen.

The VIEW screen is displayed when the camera is turned on.

For details of the VIEW screen, refer to "Screen status display".

#### ■ <INFO> button

Displays the INFO screen.

Information of the camera can be confirmed.

For details of the INFO screen, refer to "INFO screen".

#### ■ <THUMBNAIL> button

Displays the thumbnail screen.

Playback, copy, delete, or protect of a clip can be performed.

For details of the thumbnail screen, refer to "Thumbnail operation".

#### ■ <HOME> button

Displays the HOME screen.

Sets the basic setting of the camera, or checks the status of the camera.

For details of the HOME screen, refer to "HOME screen".

## Major button operation and switching screen

Switches the screen as follows when the <HOME> button, <INFO> button, <VIEW> button, or <THUMBNAIL> button is pressed.

- 1 <HOME> button
- 2 <VIEW> button
- 3 <THUMBNAIL> button
- 4 <INFO> button

### NOTE

- The VIEW screen is displayed when the camera is turned on.
- Switches to the VIEW screen automatically when the recording is started.  
If the recording is started while displaying the HOME screen, the screen will automatically switch to the HOME screen when the recording is stopped.
- Pressing the <HOME> button will switch between the HOME screen and the VIEW screen.
- The screen will not switch to the thumbnail screen when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

## Displaying the HOME screen

Status of the camera can be confirmed.

### 1 [FPS]

Displays the setting status of the variable frame rate recording function and the recording frame rate.

### 2 [COLOR]

Displays the color setting of the video recorded to the main recorder.

### 3 [SHUTTER]

Displays the shutter speed.

[sec]: Displays in time.

[deg]: Displays at shutter open angle.

### 4 [EI]

Displays the EXPOSURE INDEX (gain).

[ISO] and [dB] can be switched with the [CAMERA SETTINGS] menu → [EI] → [MODE].

### 5 [AUDIO]

Displays the status of the audio input for audio channel 1 and the audio channel 2.

[IN1]: The <AUDIO INPUT 1> terminal is selected as the audio input.

[IN2]: The <AUDIO INPUT 2> terminal is selected as the audio input.

[MIC]: An external microphone is selected as the audio input.

[LINE]: An audio device is selected as the audio input.

[INT(L)]: The built-in microphone <L> is selected as the audio input.

[INT(R)]: The built-in microphone <R> is selected as the audio input.

[48V]: The external microphone power supply is enabled.

### 6 [WB]

Displays the color temperature (white balance).

In case of the preset list acquired by the auto white balance, the color temperature is displayed with [A] at the beginning.

[ATW]: Displays while the auto tracking white balance is operating.

[ATW LOCK]: Displays when the auto tracking white balance is locked.

### 7 Number of recorded pixels/system frequency

Displays the number of recording pixels and the system frequency.

When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the RAW output resolution and the system frequency from <SDI OUT> terminal are displayed.

### 8 Pre-recording status display

Displays the re-recording status.

[P]: When the [REC SETTINGS] menu → [PRE REC] → [ON] is set and pre-recording is enabled

(No display): When the [REC SETTINGS] menu → [PRE REC] → [OFF] is set, or when pre-recording is unable

### 9 Card slot 1/card slot 2 status display

Indicates the insertion status, current recording target, and remaining recordable capacity of the SD card.

[I]: When the SD card is inserted, and it is set as the recording target

[II]: When the SD card is inserted, but it is not set as the recording target

[0min]...[999min]: Remaining recordable capacity (0 - 999 minutes, 999 minutes or more is displayed as [999min])

[END]: When there is no remaining recordable capacity

[WP]: When the write protect switch of the SD card is set to the LOCK side

[ISDXC]: When the SDHC memory card is inserted, and the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is set to a file in MOV format (displayed in red)

[ERR]: When a recording media that cannot be recorded is inserted (displayed in red)

(No display): When the SD card is not inserted, or when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF]

### 10 Special recording function display

Displays the setting and enable/disable status of the special recording function of each card slot.

[RELAY]: When set to relay recording

[SIMUL]: When set to simultaneous recording

[INTRVL]: When set to interval recording

**11 Wireless LAN connection status display**

Displays the connection status of the wireless LAN.

**(No display):** When the [NETWORK SETTINGS] menu → [NETWORK SEL] → [OFF] is set

: When ROP is not connected

: When ROP is connected

**12 Power status display**

Displays the remaining battery level, or the drive status of the AC adaptor.

: Driving with the battery (remaining battery level)

: Driving with the AC adaptor

**13 Main recording codec**

Displays the recording codec of the main recorder.

**[ONLY SDI RAW]:** When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF]

**14 Warning/alert display (page 167)**

: Warning display

: Alert display

**15 Time code display**

**[TCG \*\*:\*\*:\*\*:\*\*]:** Displays the value of the time code generator

**[UBG \*\* \*\* \*\* \*\*]:** Displays the value of the user bits generator

**[Dur. \*\*:\*\*:\*\*:\*\*]:** Displays the value of the duration

**16 Audio level meter**

Displays the recording level of audio with 18 bars. (2 dB steps)

Displays in red bar when exceeding 0 dB.

: During a mode that cannot record audio such as when the variable frame rate recording function is enabled and the set frame rate is different from the system frequency

**17 External output terminal output image setting display**

Displays the output image of the external output terminal set in the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [SDI OUT]/[HDMI OUT]/[LCD OUT].

When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], [RAW] is displayed in [SDI].

**18 CAM INDEX/REEL COUNT**

Displays the CAM INDEX, REEL COUNT, and clip number. Information about last recorded clip is displayed.

 **A003:** CAM INDEX and REEL COUNT (A001 to Z999)

 **C003:** Clip number (C001 to C999)

## Operating each screen

The HOME screen, which is the starting point of screen operation is displayed by pressing the <HOME> button.

Display the HOME screen, select [FPS], [COLOR], [SHUTTER], [EI], [AUDIO], or [WB], and change the value, etc., in the displayed screen.

- There is a method to operate with the multialdial or a grip multialdial, or a method to operate by touching the LCD monitor.

### HOME screen

Sets the basic setting of the camera.

- 1 [FPS]
- 2 [COLOR]
- 3 [SHUTTER]
- 4 [EI]
- 5 [AUDIO]
- 6 [WB]

### [FPS]

The FPS screen is displayed when [FPS] is selected in the HOME screen, allowing to select the frame rate and enable/disable the variable frame rate recording function.

**[VALUE]:** The VIEW screen is displayed and the frame rate can be selected.

- Select from the previously registered frame rate setting values in [ $\Delta$ ]/[ $\nabla$ ].
- The frame rate setting value can be added/deleted in the [CAMERA SETTINGS] menu → [FPS] → [ADD]/[DELETE]. Maximum of 150 setting values (128 for [25.00p]/[50.00p]) can be registered.

**[VFR]:** Enables/disables the variable frame rate recording function.

### NOTE

- When the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] → [OFF] is set, [VALUE] in the FPS screen cannot be selected.
- When the recording mode is set to AVCHD, or when [FREQUENCY] is set to [50.00i]/[59.94i], [FPS] in the HOME screen cannot be selected.

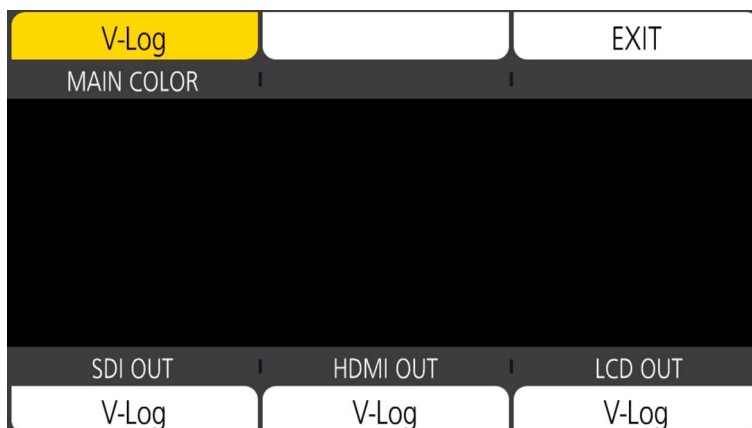

■ [VFR] display

When the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] → [ON] is set, [VFR] is displayed at the top left of [FPS], and recorded with the frame rate set in [FPS]. Audio cannot be recorded when [FREQUENCY] and [FPS] are different.

When the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] → [OFF] is set, [VFR] is not displayed. Records in the 1x speed of the rate set in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY].

[COLOR]

When [COLOR] is selected in the HOME screen, the COLOR screen is displayed allowing to set the color of the image (gamma and gamut).

**[MAIN COLOR]:** Sets the color of video recorded in the main recorder (entire camera system).

**[SDI OUT]:** Sets the output image from the <SDI OUT> terminal.

**[HDMI OUT]:** Sets the output image from the <HDMI> terminal.

**[LCD OUT]:** Sets the output image from the <LCD> terminal.

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], [MAIN COLOR] is fixed to [V-Log].
- [SDI OUT]/[HDMI OUT]/[LCD OUT] settings
  - When [MAIN COLOR] is set to [V-Log]
    - You can select [V-Log] or [V-709].
  - When [MAIN COLOR] is set to [SCENE1] to [SCENE5]
    - Setting will be same as [MAIN COLOR].
  - When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], [RAW] is displayed in [SDI OUT], and it cannot be selected. [V-Log] and [V-709] can be selected in [HDMI OUT]/[LCD OUT].

[SHUTTER]

The SHUTTER screen is displayed when [SHUTTER] is selected in the HOME screen, allowing to set the shutter speed and enable/disable the shutter function.

**[VALUE]:** The VIEW screen is displayed, and the shutter speed can be set.

- Select from the previously registered shutter speed setting values in [Δ]/[▽].
- The shutter speed setting value can be added/deleted in the [CAMERA SETTINGS] menu → [SHUTTER] → [ADD deg]/[ADD sec]/[DELETE deg]/[DELETE sec]. Maximum of 12 setting values can be registered.

**[ON/OFF]:** Enables/disables the shutter function.

**NOTE**

- When the [CAMERA SETTINGS] menu → [SHUTTER] → [SW] → [OFF] is set, [VALUE] in the SHUTTER screen cannot be selected.

**[EI]**

The EI screen is displayed when [EI] is selected in the HOME screen, allowing to set EXPOSURE INDEX (gain), and to set the operation in accordance with the setting of the [CAMERA SETTINGS] menu → [EI] → [MODE].

**[NATIVE ISO]/[800BASE ISO]/[2500BASE ISO]/[GAIN SELECT]:** The VIEW screen is displayed, and EXPOSURE INDEX (gain) can be set.

- Set EXPOSURE INDEX (gain) with [△]/[▽].

**[ISO SELECT]/[GAIN MODE]:** The VIEW screen is displayed and the operation in accordance with the setting of the [CAMERA SETTINGS] menu → [EI] → [MODE] can be set.

**[AUDIO]**

When [AUDIO] is selected in the HOME screen, the AUDIO screen is displayed, allowing to set the shutter speed.

**[CH1 IN]:** Sets the audio to be recorded in the audio channel 1.

**[CH2 IN]:** Sets the audio to be recorded in the audio channel 2.

**[INPUT1 SEL]:** Sets the audio input signal from the device connected to the <AUDIO INPUT 1> terminal.

**[INPUT2 SEL]:** Sets the audio input signal from the device connected to the <AUDIO INPUT 2> terminal.

**[WB]**

When [WB] is selected in the HOME screen, the VIEW screen is displayed, allowing to set the color temperature (white balance).

- Select from the previously registered white balance setting values in [ $\Delta$ ]/[ $\nabla$ ].
- The white balance setting value can be added/deleted in the [CAMERA SETTINGS] menu → [WHITE] → [ADD]/[DELETE]. Maximum of 12 setting values can be registered.

**INFO screen**

Displays the information of the camera.

This is displayed when the <INFO> button is pressed while displaying the HOME screen.

- In addition to operating with the multial and touch operations, each item can be selected by pressing the <INFO> button.

**[DIAGNOSTICS]:** Displays the status of the camera, such as warning.

**[SWITCHES]:** Displays the assignment status of each USER button.

**[VERSION]:** Displays the model name, serial number, and firmware version.

**[NETWORK]:** Displays the setting value and connection status of the wireless LAN.

**[AUDIO]:** Displays the audio setting and selection status of each recording channel.

**[MEDIA]:** Displays the information of the SD card.

**VIEW screen**

Displays the shooting screen.

For details of the VIEW screen, refer to "Screen status display".

**Thumbnail screen**

Playback, copy, delete, or protect of a clip can be performed.

For details of the thumbnail screen, refer to "Thumbnail operation".

## Basic operation of the menu

The setting of the camera can be changed with the menu in accordance to the shooting scene or recording contents.

Set data is written and saved in the camera memory.

- There is a method to operate with the multial or a grip multial, or a method to operate by touching the LCD monitor.

### Configuration of the menu

#### Menu types and how to open them

Menu type	Use	How to open
<b>Menu</b>	The menu is structured in categorized levels according to intended use and setting frequency.	Displayed by pressing the <MENU> button. Displayed by touching the LCD monitor for one second or more and releasing it while the VIEW screen is displayed.

### Configuration of the menu

[THUMBNAIL] menu	Performs confirmation or deleting of the recording clip. This menu can be set when the thumbnail screen is displayed.
[SYSTEM SETTINGS] menu	Sets the system in general.
[CAMERA SETTINGS] menu	Sets the basic function of the camera. This menu cannot be set when the thumbnail screen is displayed.
[SCENE FILE SETTINGS] menu	Sets the setting regarding scene file. This menu sets the detailed image quality adjustment of the camera video. Also, selection of the scene file, writing the scene file data to the camera memory, and reading from the camera memory can be performed. This menu cannot be set when the thumbnail screen is displayed.
[REC SETTINGS] menu	Sets the various items in the recording function.
[AUDIO SETTINGS] menu	Sets the input/output function of audio.
[OUTPUT SETTINGS] menu	Sets the display content or output format of the video.
[FILE] menu	Saves and reads the setting data.
[NETWORK SETTINGS] menu	Sets the setting regarding the network function.

## Displaying the menu

Displays the menu, and select the menu or item to set.

### 1 Press the <MENU> button when not recording.

The menu is displayed.

#### 1 Level display

Displays the path of the menu to the currently displayed screen.

#### 2 [▲][▼]

Moves the cursor up or down when selected.

#### 3 [↵]

Returns to one level higher from the current menu when selected.

#### 4 Menu

Moves to one level lower from the current menu, or to the setting screen when selected.

#### 5 [SET]

Confirms the set value when selected.

#### NOTE

- The menu displayed in gray characters cannot be changed.

## Operating the menu

Various settings are possible from the menu.

There are two methods of operation, a method to operate with the multial or grip multial, or a method to touch the LCD monitor.

### When operating with the multial

Operate the multial on the camera by turning it in vertical direction or pushing it.

Fig. 1

Fig. 2

#### 1 Press the <MENU> button when not recording.

The menu is displayed.

#### 2 Select the menu to set.

- 1) Turn the multial to move the cursor to the menu to set.
- 2) Press the multial.

The lower level menu is displayed.

- The confirmation screen is displayed depending on the menu.
- Perform the similar operation if there is next level.
- In some menus, a screen to set the numeric value is displayed in the VIEW screen (Fig. 2).
- In some menus, a message is displayed if a menu cannot be executed.
- To return to one level higher, press the <EXIT> button.

#### 3 Select the item to set.

- 1) Turn the multial to move the cursor to the item to set.
- 2) Press the multial.
  - A check mark is displayed at the left of the set item. (Fig. 1)
  - To return to one level higher, press the <EXIT> button.

#### 4 Press the <MENU> button to close the menu.

- Depending on the operating item, it will automatically return to the previous screen.

#### NOTE

- In a screen to set the numeric value (Fig. 2), turn the multial in your desired direction with the multial pushed in, and hold it to change the value with high speed.
- The grip multial operates equally as the multial on the camera.

## When operating by touching the LCD monitor

Operate by touching the LCD monitor.

### 1 Press the <MENU> button when not recording.

The menu is displayed.

- Menu is displayed even when the LCD monitor is touched for one second or longer and then released while the VIEW screen is displayed.

### 2 Select the menu to set.

- Touch the menu to set. The lower level menu is displayed.
- The confirmation screen is displayed depending on the menu.
- Perform the similar operation if there is next level.
- In some menus, a screen to set the numeric value is displayed in the VIEW screen.  
To change the numeric value, touch [ $\Delta$ ]/[ $\nabla$ ] and change the setting value.
- In some menus, a message is displayed if a menu cannot be executed.
- The cursor is moved up or down by touching [ $\Delta$ ]/[ $\nabla$ ].
- To return to one level higher, touch  $\leftarrow$ .

### 3 Select the item to set.

- Touch the item to set. A check mark is displayed at the left of the set item.
- To return to one level higher, touch  $\leftarrow$ .

### 4 Exit from the menu by touching $\leftarrow$ , or pressing the <MENU> button.

- Depending on the operating item, it will automatically return to the previous screen.

## Initializing the menu

The menu can be returned to the factory setting condition.

### 1 Select the [SYSTEM SETTINGS] menu → [INITIALIZE] → [LOAD FACTORY DATA].

The setting value of the menu is returned to the factory setting.

## Menu setting contents

### [THUMBNAIL] menu

Performs confirmation or deleting of the recording clip.  
This menu can be set when the thumbnail screen is displayed.

### [PLAYBACK]

#### [SLOT SEL]

Selects a clip to be displayed on the thumbnail screen.

[ALL SLOT]	Displays the clips recorded on all the SD cards in each card slot.
[SLOT1]	Displays only the clips recorded on the SD card in card slot 1.
[SLOT2]	Displays only the clips recorded on the SD card in card slot 2.

(Factory setting: [ALL SLOT])

#### [RESUME PLAY]

Select if the playback is to start from the position the playback has stopped or not.

[ON]	Plays back from the position where playback has stopped.
[OFF]	Always starts the playback from the beginning of the clip.

(Factory setting: [OFF])

### [CLIP]

The clip can be protected or copied to a different SD card.

[PROTECT]	[SELECT]	Protect the clip so it is not mistakenly deleted. Select the clip to protect, and set the protect.
[DELETE]	[ALL]	Deletes all the clips displayed in the thumbnail screen. The clip that is not displayed in the thumbnail screen is not deleted.
	[SELECT]	Select the clip to delete, and delete it.
[COPY]	[ALL]	Copies all clips to a different SD card.
	[SELECT]	Select the clip to copy, and copies to a different SD card.
[INFORMATION]		Displays the detailed information of the clip.

### NOTE

- The clip recorded in the MOV format cannot be copied.

### [SYSTEM SETTINGS] menu

Sets the system in general.

#### [SYSTEM MODE]

For the combination that can be set, refer to “Selecting the resolution, codec, and frame rate for recording video”, “Selecting the resolution and frame rate of the RAW output”.

#### [FREQUENCY]

Sets the system frequency.

The items that can be set are as follows.

- [23.98p], [24.00p], [25.00p], [29.97p], [50.00p], [59.94p], [50.00i], [59.94i]

(Factory setting: [23.98p])

### NOTE

- The camera will restart when the setting is changed.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is set to AVCHD format, different clips with system frequency in 59.94 Hz system (23.98p, 59.94p, 59.94i) and the ones in 50 Hz system (50.00p, 50.00i) cannot be recorded in a single SD card. Prepare an SD card for each system of system frequency (59.94 Hz system and 50 Hz system). [FORMAT ERROR CARD <SLOT 1>]/[FORMAT ERROR CARD <SLOT 2>] alert is displayed when the system frequency systems are different.

#### [SDI RAW]

Sets the RAW output resolution from the <SDI OUT> terminal.

[OFF]	Does not perform RAW output.
[S35 5.7K]	Performs the RAW output of the 5760×3072 pixels using all the pixels of the image sensor. Allows shooting up to 30p.
[CROP 4K]	Performs the RAW output of the 4096×2160 pixels by cutting out the center section of the image sensor. Allows shooting up to 60p. Angle of view will change.

[CROP&MIX 2K]	Performs the RAW output of the 2048×1080 pixels by cutting out the center section of the image sensor and performing the pixel mixing read. This allows high-speed shooting up to 240p. Angle of view will change.
---------------	---

(Factory setting: [OFF])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] is set to [50.00i]/[59.94i], this is fixed to [OFF].
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] is set to [50.00p]/[59.94p], [S35 5.7K] cannot be selected.
- Following conditions apply when set to anything other than [OFF].
  - Recording to an SD card with the camera is not possible.
  - The [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] will be fixed to [V-Log].
  - The [CAMERA SETTINGS] menu → [EI] → [MODE] will be fixed to [ISO].
  - The thumbnail screen is not displayed.
  - [E.I.S.], [D.ZOOM], [PRE REC], [REC CHECK], [DEL LAST CLIP], [SLOT SEL], [SDI COLOR], and [COLOR BARS] assigned to the USER button will not operate.
  - The [OUTPUT SETTINGS] menu → [SDI OUT] → [SDI REC REMOTE] and the [OUTPUT SETTINGS] menu → [HDMI OUT] → [HDMI REC REMOTE] will not operate.
  - The time code information is not output in the image output from the <HDMI> terminal.

**[SENSOR MODE]**

Sets the drive mode of the image sensor.

[S35 5.7K]	Uses the entire pixels of the image sensor.
[S35 MIX 2.8K]	Performs pixel mixing read of 2.8K from the entire image sensor. This allows high-speed shooting up to 120p.
[4/3 CROP&MIX 2.2K]	Performs the pixel mixing read of 2.2K by cropping the Four Thirds image circle from the center of the image sensor. This allows high-speed shooting up to 240p. Angle of view will change.

(Factory setting: [S35 5.7K])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SENSOR MODE] → [4/3 CROP&MIX 2.2K] is set
  - The sensitivity will be lower than when [S35 5.7K] or [S35 MIX 2.8K] is set.
  - The items that can be set in the [CAMERA SETTINGS] menu → [EI] → [NATIVE ISO] will be [400 ISO] or [1250 ISO].
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[MAIN PIXEL]**

Sets the main recorder's number of recording pixels.

The items that can be set are as follows.

- [4096x2160], [3840x2160], [2048x1080], [1920x1080], [1280x720]

(Factory setting: [4096x2160])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[MAIN CODEC]**

Sets the recording codec of the main recorder.

- MOV file

[420LongGOP 150M]	4:2:0 (8 bits) LongGOP 150 Mbps
[420LongGOP 100M]	4:2:0 (8 bits) LongGOP 100 Mbps
[420LongGOP 50M]	4:2:0 (8 bits) LongGOP 50 Mbps
[422LongGOP 150M]	4:2:2 (10 bits) LongGOP 150 Mbps
[422LongGOP 100M]	4:2:2 (10 bits) LongGOP 100 Mbps
[422LongGOP 50M]	4:2:2 (10 bits) LongGOP 50 Mbps
[422ALL-I 400M]	4:2:2 (10 bits) ALL-Intra 400 Mbps
[422ALL-I 200M]	4:2:2 (10 bits) ALL-Intra 200 Mbps
[422ALL-I 100M]	4:2:2 (10 bits) ALL-Intra 100 Mbps

- AVCHD file

[AVCHD PS]	4:2:0 (8 bits) LongGOP 25 Mbps
[AVCHD PH]	4:2:0 (8 bits) LongGOP 21 Mbps
[AVCHD HA]	4:2:0 (8 bits) LongGOP 17 Mbps
[AVCHD PM]	4:2:0 (8 bits) LongGOP 8 Mbps

(Factory setting: [422LongGOP 150M])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[COLOR SETTINGS]****[MAIN]**

Sets the colors of videos (entire camera system) recorded in the main recorder.

[V-Log]	Sets to the gamma curve that can achieve gradation and wide latitude (exposure range). A grading process after recording is required.
[SCENE1], [SCENE2], [SCENE3], [SCENE4], [SCENE5]	Sets to setting to perform detailed image quality adjustment with the camera. When [SCENE1] to [SCENE5] is selected, the menu setting for the same scene number is enabled in the [SCENE FILE SETTINGS] menu.

(Factory setting: [V-Log])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this will be fixed to [V-Log].

**[SDI OUT]**

Sets the output image from the <SDI OUT> terminal.

- When [MAIN] in [COLOR SETTINGS] is set to [V-Log]

[V-Log]	Outputs with the same color as the video recorded in the main recorder.
[V-709]	Outputs by converting to a color comparable to the standard CINE-LIKE. This is the setting appropriate for preview.

- When [MAIN] in [COLOR SETTINGS] is set to [SCENE1], [SCENE2], [SCENE3], [SCENE4], or [SCENE5]

[SCENE1], [SCENE2], [SCENE3], [SCENE4], [SCENE5]	Outputs with the same color as the video recorded in the main recorder. This cannot be changed.
--	---

(Factory setting: [V-Log])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this will be fixed to [V-Log].

**[HDMI OUT]**

Sets the output image from the <HDMI> terminal.

- When [MAIN] in [COLOR SETTINGS] is set to [V-Log]

[V-Log]	Outputs with the same color as the video recorded in the main recorder.
[V-709]	Outputs by converting to a color comparable to the standard CINE-LIKE. This is the setting appropriate for preview.

- When [MAIN] in [COLOR SETTINGS] is set to [SCENE1], [SCENE2], [SCENE3], [SCENE4], or [SCENE5]

[SCENE1], [SCENE2], [SCENE3], [SCENE4], [SCENE5]	Outputs with the same color as the video recorded in the main recorder. This cannot be changed.
--	---

(Factory setting: [V-Log])

**[LCD OUT]**

Sets the output image from the <LCD> terminal.

- When [MAIN] in [COLOR SETTINGS] is set to [V-Log]

[V-Log]	Outputs with the same color as the video recorded in the main recorder.
[V-709]	Outputs by converting to a color comparable to the standard CINE-LIKE. This is the setting appropriate for preview.

- When [MAIN] in [COLOR SETTINGS] is set to [SCENE1], [SCENE2], [SCENE3], [SCENE4], or [SCENE5]

[SCENE1], [SCENE2], [SCENE3], [SCENE4], [SCENE5]	Outputs with the same color as the video recorded in the main recorder. This cannot be changed.
--	---

(Factory setting: [V-Log])

**[USER SWITCHES]**

The function to assign the <USER 1> to <USER 9> buttons and multidiad can be set.

For details, refer to “Assigning function to the USER buttons”.

Following functions can be assigned to [USER1] to [USER9].

- [INHIBIT], [AWB], [ONE PUSH AF], [ONE PUSH A.IRIS], [ATW LOCK], [E.I.S.], [D.ZOOM], [IR SHOOTING], [REC SW], [PRE REC], [REC CHECK], [DEL LAST CLIP], [SLOT SEL], [EXPAND], [OPEN IRIS F.A.], [PEAK./SQUARES F.A.], [WFM], [SPOT METER], [ZEBRA], [LEVEL GAUGE], [LEVEL GAUGE SET], [SDI COLOR], [HDMI COLOR], [LCD COLOR], [LCD CLEAN VIEW], [LCD MARKER], [COLOR BARS], [POWER LCD]

[USER1]	Sets the function to assign to the <USER 1> button. (Factory setting: [ONE PUSH AF])
[USER2]	Sets the function to assign to the <USER 2> button. Assigned function is enabled when the VIEW screen is displayed. (Factory setting: [PEAK./SQUARES F.A.])
[USER3]	Sets the function to assign to the <USER 3> button. Assigned function is enabled when the VIEW screen is displayed. (Factory setting: [SPOT METER])

[USER4]	Sets the function to assign to the <USER 4> button. (Factory setting: [E.I.S.])
[USER5]	Sets the function to assign to the <USER 5> button. (Factory setting: [WFM])
[USER6]	Sets the function to assign to the <USER 6> button. (Factory setting: [AWB])
[USER7]	Sets the function to assign to the <USER 7> button. (Factory setting: [SLOT SEL])
[USER8]	Sets the function to assign to the <USER 8> button. (Factory setting: [EXPAND])
[USER9]	Sets the function to assign to the <USER 9> button. (Factory setting: [OPEN IRIS F.A.])
[USER TOGGLE]	Sets the function to assign to the multial. Assigned function is enabled when the VIEW screen is displayed. The items that can be set are as follows. • [INHIBIT], [SHUTTER], [FPS], [MONITOR VOL] (Factory setting: [MONITOR VOL])

**[SIDE LOCK]****[REC]**

Sets if the REC button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [UNLOCK])

**[USER1]**

Sets if the <USER 1> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER2]**

Sets if the <USER 2> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER3]**

Sets if the <USER 3> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER4]**

Sets if the <USER 4> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER5]**

Sets if the <USER 5> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER6]**

Sets if the <USER 6> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[USER7]**

Sets if the <USER 7> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[THUMBNAIL]**

Sets if the <THUMBNAIL> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[HOME]**

Sets if the <HOME> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[ND FILTER]**

Sets if the <ND FILTER> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[IRIS DIAL]**

Sets if the <IRIS> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[MENU]**

Sets if the <MENU> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[EXIT]**

Sets if the <EXIT> button is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[MULTI DIAL]**

Sets if the multidual is to be locked or not with the <LOCK> switch.

[LOCK]	It will be locked.
[UNLOCK]	It will not be locked.

(Factory setting: [LOCK])

**[LED & FAN]****[TALLY LED]**

Sets if the tally lamp is to illuminate or not.

[FRONT]	The front tally lamp will illuminate.
[REAR]	The rear tally lamp will illuminate.
[BOTH]	Both the front and rear tally lamps will illuminate.
[OFF]	The tally lamp will not illuminate.

(Factory setting: [BOTH])

**[ACCESS LED]**

Sets if the card access lamp is to illuminate or not.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[POWER LED]**

Sets if the power lamp is to illuminate or not.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

 **NOTE**

- It will illuminate approximately one second even if it is set to [OFF].

**[FAN SPEED]**

Sets the rotation speed of the fan.

[AUTO]	It will rotate in slow speed until the specified temperature is reached, and then it will rotate in the same speed as [FULL] when the specified temperature is reached.
[FULL]	It will always rotate in constant speed.

(Factory setting: [AUTO])

**[LCD]****[BRIGHTNESS]**

Adjusts the brightness of the LCD monitor.

The items that can be set are as follows.

- [-15]...[15]

(Factory setting: [0])

**[COLOR LEVEL]**

Adjusts the color level of the LCD monitor color.

The items that can be set are as follows.

- [-15]...[15]

(Factory setting: [0])

**[CONTRAST]**

Adjusts the contrast of the LCD monitor.

The items that can be set are as follows.

- [-30]...[30]

(Factory setting: [0])

**[BACK LIGHT]**

Adjusts the brightness of the LCD monitor backlight. [0] is the standard brightness.

When [POWER LCD] is assigned to the USER button and the function is enabled, the brightness will not change even when the setting of [BACK LIGHT] is changed.

The items that can be set are as follows.

- [-1], [0], [1]

(Factory setting: [0])

**[CLOCK]****[CLOCK SETTING]**

Sets the calendar (date of the built-in clock) and time.

[YEAR]	[2017]...[2037]
[MONTH]	[JAN]...[DEC] ([1]...[12])
[DAY]	[1]...[31] ([28], [29], [30])
[HOUR]	[0]...[23]
[MINUTE]	[0]...[59]

(Factory setting: [YEAR]: [2017], [MONTH]: [1], [DAY]: [1], [HOUR]: [0], [MINUTE]: [0])

**[TIME ZONE]**

Sets the time zone. It will switch to the time with the time difference added when the time zone setting is changed.

The items that can be set are as follows.

- [-12:00]...[+12:30] (30 minutes steps), [+12:45], [+13:00]

(Factory setting: [+0:00])

**[DATE FORMAT]**

Sets the display order of the year, month, and date of the calendar (date of the built-in clock). This is reflected to the date display of the clip information. The items that can be set are as follows.

- [Y-M-D], [M-D-Y], [D-M-Y]

(Factory setting: [D-M-Y])

**[INFORMATION]**

Displays the information of the camera.

[VERSION]	[MODEL]	Displays the product name of the camera.
	[SERIAL NO.]	Displays the serial number of the camera.
	[VERSION]	Displays the firmware version of the camera.
[OPERATION TIME]	[TOTAL OPERATION]	Displays the total operation time.
	[IRIS DIAL]	Displays the total number of upward rotation or downward rotation of the <IRIS> dial by updating every time it reaches 100 turns. ("T" indicates the number.)
[SENSOR TEMP]		Displays the ambient temperature of the image sensor.
[USB SERVICE MODE]		Switches to the USB service mode.
[UPDATE]		Updates the firmware.

**[LANGUAGE]**

Sets the display language.

[English]	English
[Español]	Spanish
[Français]	French
[Deutsch]	German
[Italiano]	Italian
[Русский]	Russian
[Nederland]	Dutch
[Türkçe]	Turkish
[Svenska]	Swedish
[Polski]	Polish
[Česky]	Czech
[Magyar]	Hungarian

(Factory setting: [English])

**[INITIALIZE]****[LOAD FACTORY DATA]**

Returns the setting value of the menu to the factory setting. The camera is restarted after executing.

The items that can be selected are as follows.

- [YES], [NO]

**[CAMERA SETTINGS] menu**

Sets the basic camera function.

This menu cannot be set when the thumbnail screen is displayed.

**[FPS]****[VFR SW]**

Enables/disables the variable frame rate recording function.

[ON]	Enables the variable frame rate recording function. The arbitrary frame rate can be set in [VALUE] of [FPS]. Audio cannot be recorded when [FREQUENCY] and [FPS] are different.
[OFF]	Disables the variable frame rate recording function.

(Factory setting: [OFF])

**[VALUE]**

Selects the arbitrary frame rate.

(Factory setting: The value set in [FREQUENCY])

**[ADD]**

Newly registers the frame rate. The newly registered value can be selected in [VALUE] of [FPS].

Maximum of 150 values can be registered. It cannot be registered when there are 150 registered already.

**[EDIT]**

The currently selected setting value can be edited. It will be saved after updating the setting value.

**[DELETE]**

Deletes the currently selected setting value.

It cannot be deleted if there is only one registered setting value.

**[SHUTTER]****[SW]**

Enables/disables the shutter function.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[MODE]**

Sets the displaying method of the shutter speed.

[sec]	Displays in time.
[deg]	Displays in the shutter aperture angle.

(Factory setting: [deg])

**[VALUE deg]**

Selects the aperture angle of the shutter when the display unit in [MODE] of [SHUTTER] is set to [deg].

Following values are registered as the factory settings.

- [HALF SHUTTER], [11.5d], [22.5d], [45.0d], [90.0d], [120.0d], [144.0d], [172.8d], [180.0d], [270.0d], [357.0d]

(Factory setting: [HALF SHUTTER])

**[ADD deg]**

Newly registers the aperture angle of the shutter to select when the display unit in [MODE] of [SHUTTER] is set to [deg]. The newly registered value can be selected in [VALUE deg].

Maximum of 12 values can be registered. It cannot be registered when there are 12 registered already.

**[EDIT deg]**

The currently selected setting value can be edited. It will be saved after updating the setting value.

**[DELETE deg]**

Deletes the currently selected setting value.

It cannot be deleted if there is only one registered setting value.

The items that can be selected are as follows.

- [YES], [NO]

**[VALUE sec]**

Selects the time when the display unit in [MODE] of [SHUTTER] is set to [sec].

Following values are registered as the factory settings.

- [HALF SHUTTER], [1/60.0], [1/100.0], [1/120.0], [1/250], [1/500], [1/1000], [1/2000]

(Factory setting: [HALF SHUTTER])

**[ADD sec]**

Newly registers the value of time to select when the display unit in [MODE] of [SHUTTER] is set to [sec]. The newly registered value can be selected in [VALUE sec].

Maximum of 12 values can be registered. It cannot be registered when there are 12 registered already.

**[EDIT sec]**

The currently selected setting value can be edited. It will be saved after updating the setting value.

**[DELETE sec]**

Deletes the currently selected setting value.

It cannot be deleted if there is only one registered setting value.

The items that can be selected are as follows.

- [YES], [NO]

**[EI]****[MODE]**

Switches the EXPOSURE INDEX control unit.

The items that can be set are as follows.

- [ISO], [dB]

(Factory setting: [ISO])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this will be fixed to [ISO].

**[ISO SELECT]**

Sets the operation when [ISO] is selected in [MODE] of [EI].

The items that can be set are as follows.

- [NATIVE ONLY], [800BASE], [2500BASE]

(Factory setting: [NATIVE ONLY])

**[NATIVE ISO]**

Sets the value when [NATIVE ONLY] is selected in [ISO SELECT] of [EI].

The items that can be set are as follows.

- **When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [SDI RAW] is set to anything other than [CROP&MIX 2K], and [GAMMA SELECT] is set to anything other than [VIDEO].**

[800 ISO], [2500 ISO]

- **When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K], or [SDI RAW] is set to [CROP&MIX 2K], or [GAMMA SELECT] is set to [VIDEO].**

[400 ISO], [1250 ISO]

(Factory setting: [800 ISO])

**[800BASE ISO]**

Sets the value when [800BASE] is selected in [ISO SELECT] of [EI].

The items that can be set are as follows.

- **When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [SDI RAW] is set to anything other than [CROP&MIX 2K], and [GAMMA SELECT] is set to anything other than [VIDEO].**

[200 ISO], [250 ISO], [320 ISO], [400 ISO], [500 ISO], [640 ISO], [800 ISO], [1000 ISO], [1250 ISO], [1600 ISO], [2000 ISO]

- **When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K], or [SDI RAW] is set to [CROP&MIX 2K], or [GAMMA SELECT] is set to [VIDEO].**

[200 ISO], [250 ISO], [320 ISO], [400 ISO], [500 ISO], [640 ISO], [800 ISO], [1000 ISO]

(Factory setting: [800 ISO])

**[2500BASE ISO]**

Sets the value when [2500BASE] is selected in [ISO SELECT] of [EI].

The items that can be set are as follows.

- **When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [SDI RAW] is set to anything other than [CROP&MIX 2K], and [GAMMA SELECT] is set to anything other than [VIDEO].**

[1000 ISO], [1250 ISO], [1600 ISO], [2000 ISO], [2500 ISO], [3200 ISO], [4000 ISO], [5000 ISO], [6400 ISO], [8000 ISO], [10000 ISO], [12800 ISO], [16000 ISO], [20000 ISO], [25600 ISO]

- **When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [SDI RAW] is set to anything other than [CROP&MIX 2K], and [GAMMA SELECT] is set to [VIDEO].**

[640 ISO], [800 ISO], [1000 ISO], [1250 ISO], [1600 ISO], [2000 ISO], [2500 ISO], [3200 ISO], [4000 ISO], [5000 ISO], [6400 ISO], [8000 ISO], [10000 ISO], [12800 ISO], [16000 ISO], [20000 ISO], [25600 ISO]

- **When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K], or [SDI RAW] is set to [CROP&MIX 2K].**

[640 ISO], [800 ISO], [1000 ISO], [1250 ISO], [1600 ISO], [2000 ISO], [2500 ISO], [3200 ISO], [4000 ISO], [5000 ISO], [6400 ISO], [8000 ISO], [10000 ISO], [12800 ISO]

(Factory setting: [2500 ISO])

**[GAIN MODE]**

Sets the operation when [dB] is selected in [MODE] of [EI].

The items that can be set are as follows.

- [NORMAL], [HIGH]

(Factory setting: [NORMAL])

**[GAIN SELECT]**

The values that can be selected differ depending on the setting in [MODE] of [EI], and the setting in the [SCENE FILE SETTINGS] menu → [GAMMA] → [GAMMA SELECT].

The items that can be set are as follows.

- **When [NORMAL] is selected in [GAIN MODE]**

- When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [GAMMA SELECT] is set to anything other than [VIDEO]:

[-12dB], [-10dB], [-8dB], [-6dB], [-4dB], [-2dB], [0dB], [2dB], [4dB], [6dB], [8dB]

- When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K], or [GAMMA SELECT] is set to [VIDEO]:

[-6dB], [-4dB], [-2dB], [0dB], [2dB], [4dB], [6dB], [8dB]

- **When [HIGH] is selected in [GAIN MODE]**

- When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [GAMMA SELECT] is set to anything other than [VIDEO]:

[-8dB], [-6dB], [-4dB], [-2dB], [0dB], [2dB], [4dB], [6dB], [8dB], [10dB], [12dB], [14dB], [16dB], [18dB], [20dB]

- When [SENSOR MODE] is set to anything other than [4/3 CROP&MIX 2.2K], and [GAMMA SELECT] is set to [VIDEO]:

[-6dB], [-4dB], [-2dB], [0dB], [2dB], [4dB], [6dB], [8dB], [10dB], [12dB], [14dB], [16dB], [18dB], [20dB], [22dB], [24dB], [26dB]

- When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K]:

[-6dB], [-4dB], [-2dB], [0dB], [2dB], [4dB], [6dB], [8dB], [10dB], [12dB], [14dB], [16dB], [18dB], [20dB]

(Factory setting: [0dB])

**[WHITE]****[AWB]**

Executes the adjustment of auto white balance. This can be executed when [VALUE] is set to [AWB MEMORY].

The items that can be selected are as follows.

- [EXECUTE], [CANCEL]

**[VALUE]**

Selects the adjustment value of auto white balance.

Following values are registered as the factory settings.

- [ATW], [AWB MEMORY], [3200K+0.0GMg], [4300K+0.0GMg], [5600K+0.0GMg], [6300K+0.0GMg]

(Factory setting: [3200K+0.0GMg])

**NOTE**

- [ATW] cannot be selected when the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] → [V-Log] is set.
- [ATW] cannot be selected when the [CAMERA SETTINGS] menu → [IR SHOOTING] → [ON] is set.

**[ADD]**

Newly registers the adjustment value of auto white balance. The newly registered value can be selected in [VALUE] of [WHITE].

Maximum of 12 values can be registered. It cannot be registered when there are 12 registered already.

Following values are registered as the factory settings.

- [2000K]...[15000K], [-10.0GMg]...[+10.0GMg]

**[EDIT]**

The currently selected setting value can be edited. It will be saved after updating the setting value.

**[DELETE]**

Deletes the currently selected setting value.

It cannot be deleted if there is only one registered setting value.

The items that can be selected are as follows.

- [YES], [NO]

**[NOISE REDUCTION]****[ISO800]**

Switches the noise reduction effect in the range of [800BASE ISO].

[NORMAL1] and [NORMAL2] are the settings emphasizing the resolution, and [SMOOTH] is the setting emphasizing reduction of noise.

The items that can be set are as follows.

- [SMOOTH], [NORMAL2], [NORMAL1], [OFF]

(Factory setting: [OFF])

**[ISO2500]**

Switches the noise reduction effect in the range of [2500BASE ISO].

[NORMAL1] and [NORMAL2] are the settings emphasizing the resolution, and [SMOOTH] is the setting emphasizing reduction of noise.

The items that can be set are as follows.

- [SMOOTH], [NORMAL2], [NORMAL1], [OFF]

(Factory setting: [OFF])

**[LENS SETTINGS]****[A. IRIS LEVEL EFFECT]**

Sets the target value to operate the auto iris.

The items that can be set are as follows.

- [0]...[100]

(Factory setting: [50])

**[A. IRIS WINDOW]**

Selects the window to detect the auto iris.

[NORMAL1]	Window that is around center of the screen.
[NORMAL2]	Window that is around bottom of the screen.
[CENTER]	Window that is a spot around center of the screen.

(Factory setting: [NORMAL1])

**[A. IRIS PEAK/AVE]**

Sets the ratio included in the peak for auto iris standard.

The items that can be set are as follows.

- [0]...[100]

(Factory setting: [30])

**[GRIP IRIS]**

Sets the control direction when the grip multial is used to control the iris.

[RIGHT OPEN]	The iris will open when the grip multial is turned clockwise.
[LEFT OPEN]	The iris will open when the grip multial is turned counter-clockwise.

(Factory setting: [RIGHT OPEN])

**[AF OFFSET]**

Offsets the focal position of the auto focus with + (further)/- (closer).

The items that can be set are as follows.

- [-20]...[20]

(Factory setting: [0])

**[IR SHOOTING]**

Enables/disables the IR recording.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[E.I.S.]****[SW]**

Enables/disables the electronic image stabilization function.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[ZOOM POSITION DATA]**

Sets the focal distance of the lens required for the electronic image stabilization.

[AUTO]	Performs the electronic image stabilization using the focal distance information automatically.
[MANUAL]	Performs the electronic image stabilization using the focal distance set in [ZOOM POSITION VALUE].

(Factory setting: [AUTO])

**NOTE**

- When setting to [AUTO], an EF lens supporting the acquisition of the focal distance with the communication between the camera and the lens is required.

For the latest information regarding the EF lens supporting the acquisition of the focal distance information with the communication between the camera and the lens, refer to the support desk at the following website.

<https://pro-av.panasonic.net/>

**[ZOOM POSITION VALUE]**

Sets the focal distance (mm) used when [ZOOM POSITION DATA] is set to [MANUAL].

The items that can be set are as follows.

- [8]...[200]

(Factory setting: [50])

**NOTE**

- The electronic image stabilization will not operate properly when set to distance that is different from the focal distance of the EF lens.

**[AUTO BLACK BALANCE]****[ABB]**

Executes the adjustment of auto black balance.

[EXECUTE]	Executes automatic black balance.
[EXIT]	Returns to one level higher

**[SCENE FILE SETTINGS] menu**

Sets the detailed image quality adjustment of the camera video.

This menu cannot be set when the thumbnail screen is displayed.

For factory settings, refer to “Factory setting value of the scene file”.

**[NAME EDIT]**

Edits the name of the scene file selected in the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN]. (Maximum eight characters)

**[SCENE DATA]**

For saving and loading target, refer to “Target items for scene file/setup file/initialization”.

For details of saving and loading, refer to “Handling setting data”.

**[LOAD]**

Loads the scene file saved in the camera memory, and reflects to the current setting value.

The items that can be selected are as follows.

- [YES], [NO]

**[SAVE]**

Saves the current setting value as a scene file into the camera memory.

The items that can be selected are as follows.

- [YES], [NO]

**[INITIALIZE]**

Returns the current setting value of the scene file to the factory setting.

The items that can be selected are as follows.

- [YES], [NO]

**[BLACK]**

Adjusts the standard black level.

**[M.PED]**

Adjusts the standard black level for the entire video.

The items that can be set are as follows.

- [-100]...[100]

**[R PED]**

Adjust the standard black level for Rch.

The items that can be set are as follows.

- [-100]...[100]

**[G PED]**

Adjust the standard black level for Gch.

The items that can be set are as follows.

- [-100]...[100]

**[B PED]**

Adjust the standard black level for Bch.

The items that can be set are as follows.

- [-100]...[100]

**[PEDESTAL OFFSET]**

Sets the standard black level for Rch, Gch, and Bch when the auto black balance adjustment is executed.

[ON]	The values for [R PED], [G PED], and [B PED] are maintained even after the auto black balance adjustment is executed.
[OFF]	Resets the values of the [R PED], [G PED], and [B PED] after executing the auto black balance adjustment.

**[GAMMA]**

**[GAMMA SELECT]**

Selects the gamma mode.

[V-255570L1]	A gamma curve for EVA-LOOK.
[V-504580L1]	A gamma curve for EVA-LOOK.
[VIDEO]	A gamma curve for BroadCast-LOOK.
[HLG]	A hybrid log gamma (HLG) curve.

**[MASTER GAMMA]**

Sets the master gamma in 0.01 steps.

The items that can be set are as follows.

- [0.30]...[0.75]

**[BLACK GAMMA]**

Sets the gamma curves of dark areas.

The items that can be set are as follows.

[-8]...[-1]	Compresses the dark area.
[OFF]	Standard condition.
[1]...[8]	Expands the dark area.

**[B.GAMMA RANGE]**

Sets the maximum level to perform compression/expansion of dark area.

The items that can be set are as follows.

[1]	Around 20%
[2]	Around 30%
[3]	Around 40%

**[KNEE]****[KNEE SW]**

Enables/disables operation of the knee.

The items that can be set are as follows.

- [ON], [OFF]

**[KNEE MODE]**

Sets the knee operation mode.

[D RANGE]	The dynamic range that can be represented is determined by the value of [KNEE SLOPE] in [KNEE]. The value of dynamic range that can be represented does not change even when the value of [KNEE POINT] in [KNEE] is changed.
[PRESS]	The compression rate of the signal is determined by the value of [KNEE SLOPE] in [KNEE]. The value of dynamic range that can be represented will change when the value of [KNEE POINT] in [KNEE] is changed.

**[KNEE POINT]**

Sets the position of the knee point.

The items that can be set are as follows.

- [55%] ... [100%] (1% steps)

**[KNEE SLOPE]**

Sets the knee inclination.

The items that can be set are as follows.

- [0]...[100]

**[HLG KNEE]****[KNEE SW]**

Enables/disables the operation of knee for HLG.

The items that can be set are as follows.

- [ON], [OFF]

**[KNEE POINT]**

Sets the position of the knee point for HLG.

The items that can be set are as follows.

- [55%]...[109%] (1% steps)

**[KNEE SLOPE]**

Sets the inclination of knee for HLG.

The items that can be set are as follows.

- [0]...[100]

**[WHITE CLIP]****[SW]**

Switches the enable/disable of the white clip function.

The items that can be set are as follows.

- [ON], [OFF]

**[LEVEL]**

Sets the level of the white clip.

The items that can be set are as follows.

- [90%]...[109%]

**[DETAIL]****[SW]**

Switches the enable/disable of the detail function.

The items that can be set are as follows.

- [ON], [OFF]

**[CORING]**

Sets the level of coring against the detail.

The items that can be set are as follows.

- [0]...[60]

**[MASTER LEVEL]**

Sets the level of the detail effect of the whole part.

The items that can be set are as follows.

- [-31]...[31]

**[FREQUENCY]**

Sets the thickness of the detail.

The items that can be set are as follows.

- [1]...[3]

**[SKIN DETAIL]****[SKIN DTL1]**

Selects the skin tone table of the subject to apply the skin tone, and enables/disables the skin tone detail function.

The items that can be set are as follows.

- [ON], [OFF]

**[SKIN DTL2]**

Selects the skin tone table of the subject to apply the skin tone, and enables/disables the skin tone detail function.

The items that can be set are as follows.

- [ON], [OFF]

**[SKIN DTL3]**

Selects the skin tone table of the subject to apply the skin tone, and enables/disables the skin tone detail function.

The items that can be set are as follows.

- [ON], [OFF]

**[CHROMA]****[LEVEL]**

Sets the chroma level of  $P_R$  and  $P_B$  signals.

The items that can be set are as follows.

- [OFF], [-99%]...[99%]

**[MATRIX]****[SW]**

Enables/disables the matrix function.

The items that can be set are as follows.

- [ON], [OFF]

**[(R-G)]**

Adjusts the linear matrix. (Red - Green)

The items that can be set are as follows.

- [-63]...[63]

**[(R-B)]**

Adjusts the linear matrix. (Red - Blue)

The items that can be set are as follows.

- [-63]...[63]

**[(G-R)]**

Adjusts the linear matrix. (Green - Red)

The items that can be set are as follows.

- [-63]...[63]

**[(G-B)]**

Adjusts the linear matrix. (Green - Blue)

The items that can be set are as follows.

- [-63]...[63]

**[(B-R)]**

Adjusts the linear matrix. (Blue - Red)

The items that can be set are as follows.

- [-63]...[63]

**[(B-G)]**

Adjusts the linear matrix. (Blue - Green)

The items that can be set are as follows.

- [-63]...[63]

**[COLOR CORRECTION]**

For details of setting, refer to "[COLOR CORRECTION]".

[SW]	Enables/disables the color correction function. The items that can be set are as follows. • [ON], [OFF]
[PARAM]	This function sets color saturation and phase. It can be set to individual color hue. The items that can be set are as follows. • [-63]...[63]

**[REC SETTINGS] menu**

Sets the various items in the recording function.

**[CARDS/MEDIA]****[FORMAT MEDIA]**

Formats the SD card in the specified slot. Data deleted as a result of formatting cannot be restored. Always confirm the data before formatting.

The items that can be selected are as follows.

- [SLOT1], [SLOT2]

**[CLIP NAME]****[CAM INDEX]**

Sets the CAM INDEX used in the name for the MOV format file to be recorded. Set one upper case alphabetical character. This is used as a value to be stored in the volume label of the SD card.

The items that can be set are as follows.

- [A]...[Z]

(Factory setting: [A])

**NOTE**

- This will be stored in the volume label of the SD card, but will not be used in the file name when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is set to AVCHD format.

**[NEXT REEL COUNT]**

Sets the REEL COUNT used in the name for the MOV format file to be recorded. The setting value of [NEXT REEL COUNT] is stored in the volume label of the SD card as REEL COUNT together with the setting value of [CAM INDEX]. Also, the setting value will increase one after storing. (It will return to [001] after [999])

- When the SD card is formatted
- When recorded to the SD card where REEL COUNT is not stored in the volume label

The items that can be set are as follows.

- [001]...[999]

(Factory setting: [001])

**NOTE**

- This will be stored in the volume label of the SD card, but will not be used in the file name when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is set to AVCHD format.

**[2 SLOTS FUNC.]**

Sets the recording function using two SD cards.

[OFF]	Does not set.
[RELAY REC]	Sets to relay recording.
[SIMUL REC]	Sets to simultaneous recording.

(Factory setting: [RELAY REC])

**NOTE**

- For the combination that can be set and restriction, refer to "Recording function that cannot be used simultaneously".

**[PRE REC]**

Sets whether to perform pre-recording.

The pre-recording time differs depending on the setting of the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL]/[MAIN CODEC].

[ON]	Performs the pre-recording. The pre-recording time is as follows. <ul style="list-style-type: none"> <li>• When [MAIN PIXEL] is [1280x720], [1920x1080], or [2048x1080]: Approximately 10 seconds</li> <li>• When [MAIN CODEC] is [422ALL-I 400M]: Approximately 3 seconds</li> <li>• Other than above: Approximately 5 seconds</li> </ul>
[OFF]	Does not perform the pre-recording.

(Factory setting: [OFF])

**NOTE**

- For the combination that can be set and restriction, refer to “Recording function that cannot be used simultaneously”.

**[REC FUNCTION]****[REC MODE]**

Selects the recording mode.

[NORMAL]	Performs the standard recording.
[INTERVAL]	Performs the interval recording. (A function to repeatedly perform the operation of one frame recording in set time interval.)

(Factory setting: [NORMAL])

**NOTE**

- For the combination that can be set and restriction, refer to “Recording function that cannot be used simultaneously”.

**[INTERVAL TIME]**

Sets the interval duration for interval recording.

The items that can be set are as follows.

- [1s], [2s], [5s], [10s], [30s], [1min], [5min], [10min]

(Factory setting: [5min])

**[TC]****[SET TC]**

Sets the default value of the time code to record.

Hour	[00]...[23]
Minute	[00]...[59]
Second	[00]...[59]
Frame	[00] ... [23] (when [24.00p] or [23.98p] is set) [00] ... [24] (when [50.00i], [50.00p], or [25.00p] is set) [00] ... [29] (when [59.94i], [59.94p], or [29.97p] is set)

(Factory setting: [00]) (each item)

**[SET UB]**

Sets user bits.

Enabled only when [USER] is selected in [UB MODE] of [TC].

Each digit can be set in following range.

- [00]...[FF]

(Factory setting: [00])

**[TC/UB/Dur.]**

Switches the time code display to the user bits or duration counter display.

The items that can be set are as follows.

[TC]	Time code display
[UB]	User bits display
[Dur.]	Duration counter display

(Factory setting: [TC])

**[FREE/REC RUN]**

Sets the operation mode to advance the time code generator.

[FREE RUN]	Advances regardless of the operation mode.
[REC RUN]	Advances only while recording.

(Factory setting: [FREE RUN])

**NOTE**

- It will be fixed to [REC RUN] when the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] → [ON] is set.
- It will be fixed to [FREE RUN] when the [REC SETTINGS] menu → [PRE REC] → [ON] is set.
- It will be fixed to [REC RUN] when the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] → [INTERVAL] is set.

**[DF/NDF]**

Sets the count method for the time code generator.

Enabled only when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] → [59.94i]/[59.94p]/[29.97p] is set.

[DF]	Uses the drop frame mode.
[NDF]	Uses the non-drop frame mode.

(Factory setting: [NDF])

**NOTE**

- It will be fixed to [NDF] when the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] → [INTERVAL] is set.

**[UB MODE]**

Selects the user bits mode. User bits information is recorded in the clip. Also, it is output as LTC UB, VITC UB of the SDI signal.

[FRAME RATE]	Selects the image information (such as frame rate) of the camera.
[USER]	Selects the user bits set in [SET UB].
[TIME]	Selects the local time. (hh, mm, ss)
[DATE]	Selects the local date and time. (YY, MM, DD, hh)
[CLIP NAME]	ASCII character code of the CAM INDEX (A to Z) recorded as a MOV format file goes into MSB. Also, three digit ASCII character code of the REEL COUNT recorded as the MOV format file goes into LSB. (Example: A123=0x41 0x31 0x32 0x33) It will record even if the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is not set to the MOV format.

(Factory setting: [USER])

**[TC IN/OUT SEL]**

Sets the input/output of the <TC IN/OUT> terminal.

[TC IN]	Sets to the time code input.
[TC OUT]	Sets to the time code output.

(Factory setting: [TC IN])

**[TC OUT REF]**

Sets the output delay of the time code that is output from the <TC IN/OUT> terminal.

[RECORDING]	Outputs the recording time code without delay. This is used when performing simultaneous recording on two cameras with the time code of this camera as the master.
[SDI OUT]	Matches to output image from the <SDI OUT> terminal. Outputs without delay when video is not output from the <SDI OUT> terminal.

(Factory setting: [RECORDING])

**[AUDIO SETTINGS] menu**

Sets the input/output function of audio.

**[AUDIO CH SETTINGS]****[CH1 IN SELECT]**

Sets the audio to be recorded in the audio channel 1.

[INT(L)]	Records the audio from the built-in microphone <L>.
[INPUT1]	Records the input signal from the <AUDIO INPUT 1> terminal.

(Factory setting: [INT(L)])

**[CH2 IN SELECT]**

Sets the audio to be recorded in the audio channel 2.

[INT(R)]	Records the audio from the built-in microphone <R>.
[INPUT1]	Records the input signal from the <AUDIO INPUT 1> terminal.
[INPUT2]	Records the input signal from the <AUDIO INPUT 2> terminal.

(Factory setting: [INT(R)])

**[CH1 MIC LOWCUT]**

Enables/disables the lowcut filter for audio channel 1.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[CH2 MIC LOWCUT]**

Enables/disables the lowcut filter for audio channel 2.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[CH1 LIMITER]**

Enables/disables the limiter when the method to adjust the audio input level for audio channel 1 is manual.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[CH2 LIMITER]**

Enables/disables the limiter when the method to adjust the audio input level for audio channel 2 is manual.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[HEAD ROOM]**

Sets the headroom (standard level).

The items that can be set are as follows.

- [18dB], [20dB]

(Factory setting: [18dB])

**[AUDIO INPUT]****[INPUT1 LINE/MIC SEL]**

Sets the audio input signal from the device connected to the <AUDIO INPUT 1> terminal.

[LINE]	Sets this when an audio device is connected.
[MIC]	Sets this when an external microphone is connected.

(Factory setting: [LINE])

**[INPUT2 LINE/MIC SEL]**

Sets the audio input signal from the device connected to the <AUDIO INPUT 2> terminal.

[LINE]	Sets this when an audio device is connected.
[MIC]	Sets this when an external microphone is connected.

(Factory setting: [LINE])

**[INPUT1 MIC POWER]**

Enables/disables the phantom power supply for the external microphone connected to the <AUDIO INPUT 1> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[INPUT2 MIC POWER]**

Enables/disables the phantom power supply for the external microphone connected to the <AUDIO INPUT 2> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[INPUT1 MIC LEVEL]**

Sets the input level of the external microphone connected to the <AUDIO INPUT 1> terminal. Enabled when the external microphone is connected and [INPUT1 LINE/MIC SEL] of [AUDIO INPUT] is set to [MIC].

The items that can be set are as follows.

- [-40dB], [-50dB], [-60dB]

(Factory setting: [-60dB])

**[INPUT2 MIC LEVEL]**

Sets the input level of the external microphone connected to the <AUDIO INPUT 2> terminal. Enabled when the external microphone is connected and [INPUT2 LINE/MIC SEL] of [AUDIO INPUT] is set to [MIC].

The items that can be set are as follows.

- [-40dB], [-50dB], [-60dB]

(Factory setting: [-60dB])

**[INPUT1 LINE LEVEL]**

Sets the audio input level of the audio device connected to the <AUDIO INPUT 1> terminal. Enabled when the audio device is connected and [INPUT1 LINE/MIC SEL] of [AUDIO INPUT] is set to [LINE].

The items that can be set are as follows.

- [4dB], [0dB]

(Factory setting: [4dB])

#### [INPUT2 LINE LEVEL]

Sets the audio input level of the audio device connected to the <AUDIO INPUT 2> terminal. Enabled when the audio device is connected and [INPUT2 LINE/MIC SEL] of [AUDIO INPUT] is set to [LINE].

The items that can be set are as follows.

- [4dB], [0dB]

(Factory setting: [4dB])

#### [AUDIO OUTPUT]

##### [MONITOR OUT]

Sets the audio channel and the format to be output from the headphone terminal.

[CH1]	Outputs the signal for audio channel 1 as monaural.
[CH2]	Outputs the signal for audio channel 2 as monaural.
[STEREO]	Outputs the signals of the audio channel 1 and the audio channel 2 as stereo.
[MIX]	Mixes the signals of the audio channel 1 and the audio channel 2 and outputs as monaural.

(Factory setting: [STEREO])

##### [MONITOR DELAY]

Sets if the audio from the headphone terminal is to be delayed to match the video on the LCD monitor.

[LIVE]	Outputs without delay.
[RECORDING]	Matches to the video on the LCD monitor.

(Factory setting: [LIVE])

##### [MONITOR VOL]

Adjusts the level of audio output from the headphone terminal.

The items that can be set are as follows.

- [0]...[100]

(Factory setting: [70])

#### [REC BEEP SOUND]

##### [MODE]

Sets if the beep sound is generated when starting or stopping the recording.

[OFF]	The beep sound is not generated.
[START]	The beep sound is generated only when the recording is started.
[STOP]	The beep sound is generated only when the recording is stopped.
[START&STOP]	The beep sound is generated when the recording is started and stopped.

(Factory setting: [OFF])

##### [VOLUME]

Sets the volume of the beep sound when starting or stopping the recording.

The items that can be set are as follows.

- [HIGH], [MED], [LOW]

(Factory setting: [MED])

#### [ALARM]

##### [BATTERY END]

Sets if the alarm is to be sounded when the remaining battery level is exhausted.

The items that can be set are as follows.

- [HIGH], [MED], [LOW], [OFF]

(Factory setting: [MED])

##### [MEDIA END]

Sets if the alarm is sounded when the remaining recordable capacity of the SD card is exhausted.

The items that can be set are as follows.

- [HIGH], [MED], [LOW], [OFF]

(Factory setting: [MED])

#### NOTE

- Volume of the alarm during system error is fixed to [MED].

**[OUTPUT SETTINGS] menu**

Sets the display content or output format of the video.

**[SDI OUT]****[OUTPUT SW]**

Enables/disables the output from the <SDI OUT> terminal.

[ON]	Outputs the video.
[OFF]	Does not output the video.

(Factory setting: [ON])

**NOTE**

- It will be fixed to [ON] when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**[SIGNAL SEL]**

Sets the output from the <SDI OUT> terminal.

[SDI]	Outputs the signal set in [OUT FORMAT] of [SDI OUT].
[LCD(1080p)]	Outputs the video displayed on the LCD monitor in 1920×1080p.
[LCD(1080i)]	Outputs the video displayed on the LCD monitor in 1920×1080i.

(Factory setting: [SDI])

**NOTE**

- It will be fixed to [SDI] when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**[OUT FORMAT]**

Selects the signal to be output from the <SDI OUT> terminal. The items that can be selected differ depending on the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]/[MAIN PIXEL].

[4096x2160p]	Outputs in 4096×2160p.
[3840x2160p]	Outputs in 3840×2160p.
[1920x1080p]	Outputs in 1920×1080p.
[1920x1080i]	Outputs in 1920×1080i.
[1920x1080PsF]	Outputs in 1920×1080PsF.
[1280x720p]	Outputs in 1280×720p.

(Factory setting: [1920x1080PsF])

**NOTE**

- For the combination that can be set, refer to "Format that can be output from the <SDI OUT> terminal".
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[3G-SDI OUT]**

Sets the format of the 3G SDI signal output from the <SDI OUT> terminal. Can be set when the 3G SDI signal is output.

[LEVEL-A]	Selects the LEVEL-A method.
[LEVEL-B]	Selects the LEVEL-B DL method.

(Factory setting: [LEVEL-B])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[SDI REC REMOTE]**

Sets if the recording operation against the external equipment connected to the <SDI OUT> terminal (such as recorder) is to be controlled or not.

[ON]	Controls the recording operation of the external equipment.
[OFF]	Does not control the recording operation of the external equipment.

(Factory setting: [OFF])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.
- When the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] is set to [INTERVAL], this cannot be set.

**[INDICATOR DISP]**

Displays/hides the item set in [SDI/HDMI INDICATOR] for the output from the <SDI OUT> terminal.

[ON]	Displays the shutter speed, remaining battery level, etc. Content of display follows the setting in [SDI/HDMI INDICATOR].
[OFF]	Hides all.

(Factory setting: [ON])

**NOTE**

- This is not displayed in the output from the <SDI OUT> terminal when the menu is displayed in the LCD monitor.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[MARKER DISP]**

Sets if the marker set in [SDI/HDMI MARKER] is displayed or not in the output from the <SDI OUT> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[MENU DISP]**

Sets if the menu is displayed or not in the output from the <SDI OUT> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**NOTE**

- Even if [MENU DISP] is set to [OFF], the menu is displayed in the output from the <SDI OUT> terminal during the thumbnail screen.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

**[HDMI OUT]****[SIGNAL SEL]**

Sets the output from the <HDMI> terminal.

[HDMI]	Outputs the signal set in [OUT FORMAT] of [HDMI OUT].
[LCD(1080p)]	Outputs the video displayed on the LCD monitor in 1920×1080p.

(Factory setting: [HDMI])

**NOTE**

- Following functions are not displayed even when [LCD(1080p)] is set.
  - Focus square display
  - Waveform monitor
  - Zebra pattern when the skin tone detail function is set to enable
- When set to [LCD(1080p)], [HDMI TC OUT] is disabled.

**[OUT FORMAT]**

Selects the signal to be output from the <HDMI> terminal. The items that can be selected differ depending on the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]/[MAIN PIXEL].

[4096x2160p]	Outputs in 4096×2160p (4:2:2/10 bits).
[4096x2160p(420/8bit)]	Outputs in 4096×2160p (4:2:0/8 bits).
[3840x2160p]	Outputs in 3840×2160p (4:2:2/10 bits).
[3840x2160p(420/8bit)]	Outputs in 3840×2160p (4:2:0/8 bits).
[1920x1080p]	Outputs in 1920×1080p.
[1920x1080i]	Outputs in 1920×1080i.
[1280x720p]	Outputs in 1280×720p.
[720x480p]	Outputs in 720×480p.
[720x576p]	Outputs in 720×576p.

(Factory setting: [1920x1080p])

**NOTE**

- For the combination that can be set, refer to “Format that can be output from the <HDMI> terminal”.
- It will be fixed to [1920x1080p] when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], and the [OUTPUT SETTINGS] menu → [HDMI OUT] → [SIGNAL SEL] is set to [HDMI].

**[HDMI TC OUT]**

Sets if the time code information is output or not in the output from the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.
- When the [OUTPUT SETTINGS] menu → [HDMI OUT] → [SIGNAL SEL] is set to [LCD(1080p)], this cannot be set.

**[HDMI REC REMOTE]**

Sets if the recording operation against the external equipment connected to the <HDMI> terminal (such as recorder) is to be controlled or not. This can be set when [HDMI TC OUT] in [HDMI OUT] is enabled.

[ON]	Controls the recording operation of the external equipment.
[OFF]	Does not control the recording operation of the external equipment.

(Factory setting: [OFF])

**NOTE**

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.
- When the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] is set to [INTERVAL], this cannot be set.

**[INDICATOR DISP]**

Displays/hides the item set in [SDI/HDMI INDICATOR] for the output from the <HDMI> terminal.

[ON]	Displays the shutter speed, remaining battery level, etc. Content of display follows the setting in [SDI/HDMI INDICATOR].
[OFF]	Hides all.

(Factory setting: [ON])

**NOTE**

- This is not displayed in the output from the <HDMI> terminal when the menu is displayed in the LCD monitor.

**[MARKER DISP]**

Set if the marker set in [SDI/HDMI MARKER] is to be displayed or not in the output from the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[MENU DISP]**

Sets if the menu is displayed or not in the output from the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**NOTE**

- Even if [MENU DISP] is set to [OFF], the menu is displayed in the output from the <HDMI> terminal during the thumbnail screen.

**[SDI/HDMI INDICATOR]**

Selects the indicator to display in the output image from the <SDI OUT> terminal or the output image from the <HDMI> terminal.

To display, set the [OUTPUT SETTINGS] menu → [SDI OUT] → [INDICATOR DISP] and the [OUTPUT SETTINGS] menu → [HDMI OUT] → [INDICATOR DISP] to [ON].

For content of display, refer to “Screen status display”.

**[CLIP NAME]**

Displays/hides file name of the clip to record. Displays maximum of 8 characters from beginning.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[PIXEL/FREQ]**

Displays/hides the number of recorded pixels and system frequency of the main recorder.

The display contents differ depending on the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL] and [SENSOR MODE].

- When [SENSOR MODE] is set to [S35 MIX 2.8K]: [2048 MIX] and [1920 MIX] are additionally displayed.
- When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K]: [2048 CROP] and [1920 CROP] are additionally displayed.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the RAW output resolution and the system frequency set in [SDI RAW] are displayed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[MAIN COLOR]**

Displays/hides the color setting of the video to be recorded in the main recorder.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[REC FORMAT]**

Displays/hides recording codec of the main recorder.

When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], [SDI RAW] is displayed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [SLOT1/2 STATUS]

Displays/hides the status of the card slot and remaining recordable capacity.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [2 SLOTS FUNC.]

Displays/hides the setting in the [REC SETTINGS] menu → [2 SLOTS FUNC.].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [TC]

Displays/hides the time code, user bits, and duration counter. The display contents follow the setting in the [REC SETTINGS] menu → [TC] → [TC/UB/Dur.]. Displays the duration counter of TCR/UBR/playback clip during playback.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [BATTERY REMAIN]

Displays/hides the power status display.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [REC MODE]

Displays/hides the status of the interval recording.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [REC REMOTE]

Displays/hides the control status of the recording start and recording stop on the external equipment connected to the <SDI OUT> terminal and the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [AUDIO LEVEL METER]

Displays/hides the audio level meter.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [FPS]

Displays/hides the setting in the [CAMERA SETTINGS] menu → [FPS].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [SHUTTER]

Displays/hides the shutter speed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [EI]

Displays/hides EXPOSURE INDEX.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

---

#### [WHITE]

Displays/hides color temperature.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[IRIS/ZOOM]**

Displays/hides the lens aperture value and zoom value.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[ND FILTER]**

Displays/hides the ND filter transmittance.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[E.I.S./D.ZOOM]**

Displays/hides the setting in [E.I.S.] or [D.ZOOM].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[WLAN]**

Displays/hides the connection status display of the wireless LAN.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[IR SHOOTING]**

Displays/hides the setting in the [CAMERA SETTINGS] menu → [IR SHOOTING].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[SPOT METER]**

Displays/hides the spot meter.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[PLAYBACK STATUS]**

Displays/hides the playback status.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[SDI/HDMI MARKER]**

#### **[CENTER MARKER]**

Switch the type of the center marker.

[1]	+ (large)
[2]	Open center (large)
[3]	+ (small)
[4]	Open center (small)
[OFF]	Does not display.

(Factory setting: [1])

#### **[SAFETY MARKER]**

Selects the type of frame for the safety zone marker.

[1]	Box
[2]	Corners
[OFF]	Does not display.

(Factory setting: [OFF])

#### **[SAFETY AREA]**

Sets the size of the safety zone marker.

The items that can be set are as follows.

- [71.6%], [80%], [90%], [95%]

(Factory setting: [90%])

**[FRAME MARKER]**

Sets the aspect ratio of the frame marker. The frame marker is not displayed when [OFF] is selected.

The items that can be set are as follows.

- [1.33:1], [1.44:1], [1.56:1], [1.78:1], [1.85:1], [2.00:1], [2.201:1], [2.35:1], [2.39:1], [OFF]

(Factory setting: [OFF])

**[FRAME COLOR]**

Sets the color of the frame marker.

The items that can be set are as follows.

- [WHITE], [BLACK], [RED], [GREEN], [BLUE], [YELLOW]

(Factory setting: [WHITE])

**[PLAYBACK MARKER]**

Displays/hides the marker against the playback video output from the <SDI OUT> terminal and the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[LCD INDICATOR]**

Selects the indicator displayed in the LCD monitor. For details of the displayed contents, refer to “Screen status display”.

**[CLIP NAME]**

Displays/hides file name of the clip to record. Displays maximum of 8 characters from beginning.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[PIXEL/FREQ]**

Displays/hides the number of recorded pixels and system frequency of the main recorder.

The display contents differ depending on the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL] and [SENSOR MODE].

- When [SENSOR MODE] is set to [S35 MIX 2.8K]: [2048 MIX] and [1920 MIX] are additionally displayed.
- When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K]: [2048 CROP] and [1920 CROP] are additionally displayed.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the RAW output resolution and the system frequency set in [SDI RAW] are displayed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[MAIN COLOR]**

Displays/hides the color setting of the video to be recorded in the main recorder.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[REC FORMAT]**

Displays/hides recording codec of the main recorder.

When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], [SDI RAW] is displayed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[SLOT1/2 STATUS]**

Displays/hides the status of the card slot and remaining recordable capacity.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[2 SLOTS FUNC.]**

Displays/hides the setting in the [REC SETTINGS] menu → [2 SLOTS FUNC.].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[TC]**

Displays/hides the time code, user bits, and duration counter. The display contents follow the setting in the [REC SETTINGS] menu → [TC] → [TC/UB/Dur.]. Displays the duration counter of TCR/UBR/playback clip during playback.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[BATTERY REMAIN]**

---

Displays/hides the power status display.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[REC MODE]**

---

Displays/hides the status of the interval recording.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[REC REMOTE]**

---

Displays/hides the control status of the recording start and recording stop on the external equipment connected to the <SDI OUT> terminal and the <HDMI> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[AUDIO LEVEL METER]**

---

Displays/hides the audio level meter.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[FPS]**

---

Displays/hides the setting in the [CAMERA SETTINGS] menu → [FPS].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[SHUTTER]**

---

Displays/hides the shutter speed.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[EI]**

---

Displays/hides EXPOSURE INDEX.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[WHITE]**

---

Displays/hides color temperature.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[IRIS/ZOOM]**

---

Displays/hides the lens aperture value and zoom value.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[ND FILTER]**

---

Displays/hides the ND filter transmittance.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[E.I.S./D.ZOOM]**

---

Displays/hides the setting in [E.I.S.] or [D.ZOOM].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### **[WLAN]**

---

Displays/hides the connection status display of the wireless LAN.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### [IR SHOOTING]

Displays/hides the setting in the [CAMERA SETTINGS] menu → [IR SHOOTING].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### [SPOT METER]

Displays/hides the spot meter.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### [PLAYBACK STATUS]

Displays/hides the playback status.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

#### [LCD MARKER]

##### [CENTER MARKER]

Switch the type of the center marker.

[1]	+ (large)
[2]	Open center (large)
[3]	+ (small)
[4]	Open center (small)
[OFF]	Does not display.

(Factory setting: [1])

##### [SAFETY MARKER]

Selects the type of frame for the safety zone marker.

[1]	Box
[2]	Corners
[OFF]	Does not display.

(Factory setting: [OFF])

##### [SAFETY AREA]

Sets the size of the safety zone marker.

The items that can be set are as follows.

- [71.6%], [80%], [90%], [95%]

(Factory setting: [90%])

##### [FRAME MARKER]

Sets the aspect ratio of the frame marker. The frame marker is not displayed when [OFF] is selected.

The items that can be set are as follows.

- [1.33:1], [1.44:1], [1.56:1], [1.78:1], [1.85:1], [2.00:1], [2.201:1], [2.35:1], [2.39:1], [OFF]

(Factory setting: [OFF])

##### [FRAME COLOR]

Sets the color of the frame marker.

The items that can be set are as follows.

- [WHITE], [BLACK], [RED], [GREEN], [BLUE], [YELLOW]

(Factory setting: [WHITE])

##### [PLAYBACK MARKER]

Displays/hides the marker against the playback video output from the <LCD> terminal

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[LCD FOCUS ASSIST]****[EXPAND MODE]**

Sets the enlargement display function mode.

[10SEC]	Disables the enlarged display function after ten seconds have elapsed.
[HOLD]	The enlarged display function is enabled until the USER button assigned with [EXPAND] is pressed again.
[UNTIL REC]	Enables the enlarged display function until performing recording operation.

(Factory setting: [10SEC])

**[EXPAND VALUE]**

Adjusts the enlargement factor of the enlarged display function.

The items that can be set are as follows.

- [x2], [x3], [x4]

(Factory setting: [x2])

**[PEAK./SQUARES MODE]**

Enables/disables the peaking function and focus square display (focus assist function).

[PEAKING]	Enables the peaking display.
[SQUARES]	Enables the focus square display.
[PEAK./SQUARES]	Enables peaking display and the focus square display. It will switch in the order of peaking display, focus square display, and no display every time the USER button with [PEAK./SQUARES F.A.] assigned is pressed.

(Factory setting: [SQUARES])

**[PEAKING LEVEL]**

Sets the intensity of the peaking display.

The items that can be set are as follows.

- [LOW], [MID], [HIGH]

(Factory setting: [MID])

**[PEAKING COLOR]**

Sets the color of the peaking display.

The items that can be set are as follows.

- [RED], [GREEN], [WHITE]

(Factory setting: [RED])

**[BLACK & WHITE]**

Enables/disables the monochrome display.

[ON]	Enables the monochrome display.
[OFF]	Disables the monochrome display.
[DURING PEAK./SQUARES]	The monochrome display is enabled while the peaking display and the focus square display is enabled.

(Factory setting: [OFF])

**[OPEN IRIS MODE]**

Sets the time for the open iris focus assist function is to operate. The open iris focus assist function is forced to cancel when the recording is started.

The items that can be set are as follows.

- [10SEC], [30SEC]

(Factory setting: [10SEC])

**[LCD EI ASSIST]****[ZEBRA]**

Sets if the zebra signal is superimposed or not to the output from the <LCD> terminal.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [OFF])

**[ZEBRA1 DETECT]**

Sets the detection level of zebra pattern 1.

The items that can be set are as follows.

- [0%]...[109%]

(Factory setting: [80%])

**[ZEBRA2 DETECT]**

Sets the detection level of zebra pattern 2.

The items that can be set are as follows.

- [0%]...[109%]

(Factory setting: [100%])

**[ZEBRA2]**

Enables/disables zebra pattern 2 and selects [SPOT].

The items that can be set are as follows.

- [ON], [SPOT], [OFF]

(Factory setting: [OFF])

**[WFM MODE]**

Sets the display of the waveform monitor. Displaying of the waveform and the vector can be switched.

[WAVE]	Displays the waveform.
[VECTOR]	Displays the vector.
[WAVE/VECTOR]	Displays the waveform and the vector. It will switch in the order of waveform, vector, and no display every time the USER button with [WFM] assigned is pressed.

(Factory setting: [WAVE])

**[WFM TRANSPARENCE]**

Sets the transmittance of the waveform monitor.

The items that can be set are as follows.

- [0%], [25%], [50%]

(Factory setting: [25%])

**[SPOT METER UNIT]**

Sets the display unit for the spot meter.

This is fixed to [%] when set to anything other than the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] → [V-Log].

The items that can be set are as follows.

- [STOP], [%]

(Factory setting: [STOP])

**[SPOT METER SIZE]**

Sets the size of area to detect with the spot meter display function.

The items that can be set are as follows.

- [S], [M], [L]

(Factory setting: [M])

**[LCD LEVEL GAUGE]****[LEVEL GAUGE]**

Displays/hides the level gauge.

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[LEVEL GAUGE RESET]**

Sets the horizontal and vertical reference value set by [LEVEL GAUGE SET] in the USER button to the factory setting.

The items that can be selected are as follows.

- [YES], [NO]

**[COLOR BARS]****[COLOR BARS TYPE]**

Sets the color bar to be used.

[SMPTE]	Uses the color bars in SMPTE standard.
[FULL]	Uses the full color bars.

(Factory setting: [SMPTE])

**[TEST TONE]**

Sets if the audio test signal (tone signal of rating level 1 kHz) is output or not when the color bars are displayed.

The reference level varies depending on the setting in the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [HEAD ROOM].

The items that can be set are as follows.

- [ON], [OFF]

(Factory setting: [ON])

**[FILE] menu**

Saves and reads the setting data.

For saving and loading target, refer to “Target items for scene file/setup file/initialization”.

For details of saving and loading, refer to “Handling setting data”.

**[SCENE FILE]**

[LOAD]	Selects the scene file saved in the SD card and reads it into the camera. Can select if all of the scene files ([SCENE1] to [SCENE5]) are read, or individually read.
[SAVE]	The setting value of the current scene file ([SCENE1] to [SCENE5]) is overwritten to the file selected from the list of scene files saved in the SD card.
[SAVE AS]	The setting value of the current scene file ([SCENE1] to [SCENE5]) is saved to the SD card as a new scene file by entering the file name.

**[SETUP FILE]**

[LOAD]	Selects the setup file saved in the SD card and reads it into the camera.
[SAVE]	Overwrites the file selected in the list of the setup files saved in the SD memory card with the current setting value of the camera.
[SAVE AS]	Saves the current setting value in the camera as a new setup file in the SD card by entering the file name.

**[NETWORK SETTINGS] menu**

Sets the setting regarding the network function.

**[NETWORK SEL]**

Sets if the external equipment (PC, etc.) and the camera is to be connected to the network using the wireless LAN.

[WLAN]	Connects with wireless LAN.
[OFF]	Does not connect.

(Factory setting: [OFF])

**[NETWORK FUNC]****[USER ACCOUNT]**

Sets the user account to be used for authentication in the network function of the camera.

[ADD]	Newly registers the user account. It is set as follows when not registered. User account name: “guest”, password: “auguest”
[DELETE]	Deletes the registered user account. This will not operate when not registered.

**[NETWORK PROPERTY]****[MAC ADDRESS]**

Displays the wireless LAN MAC address of the camera. (Cannot be changed)

**[TYPE]**

Sets the connection method to the wireless LAN.

[DIRECT]	It can connect directly without using a wireless access point to a device equipped with wireless LAN such as a tablet terminal.
[INFRA(SELECT)]	Connects to the wireless access point. The access point is selected from the list.
[INFRA(MANUAL)]	Connects to the wireless access point. Wireless access point is entered manually.

(Factory setting: [DIRECT])

**[SSID]**

Enters or displays the network name of the camera (SSID).

(Factory setting: [AU-EVA1])

**[BAND]**

Switches between two communication methods ([2.4GHz] or [5GHz]) when [NETWORK PROPERTY] → [TYPE] → [DIRECT] is selected.

The items that can be set are as follows.

- [2.4GHz], [5GHz]

(Factory setting: [2.4GHz])

**[CHANNEL(2.4GHz)]**

Sets the channel to be used when connected to the wireless LAN with following items set.

- The [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [TYPE] → [DIRECT]
- The [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [BAND] → [2.4GHz]

The items that can be set are as follows.

- [AUTO], [CH1], [CH6], [CH11]

(Factory setting: [AUTO])

#### **[CHANNEL(5GHz)]**

Sets the channel to be used when connected to the wireless LAN with following items set.

- The [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [TYPE] → [DIRECT]
- The [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [BAND] → [5GHz]

The items that can be set are as follows.

- [AUTO], [CH36], [CH40], [CH44], [CH48], [CH100], [CH104], [CH108], [CH112], [CH116], [CH132], [CH136], [CH140], [CH149], [CH153], [CH157], [CH161], [CH165]

(Factory setting: [AUTO])

#### **NOTE**

- Some items may not be able to select depending on the used wireless module.

#### **[ENCRYPTION]**

Sets the encryption method when [NETWORK PROPERTY] → [TYPE] → [INFRA(SELECT)]/[INFRA(MANUAL)] is selected.

The items that can be set are as follows.

- [WPA-TKIP], [WPA-AES], [WPA2-TKIP], [WPA2-AES], [NONE]

(Factory setting: [WPA2-AES])

#### **[ENCRYPT KEY]**

Sets the encryption key. Set the key using a string of 8 to 63 characters or a hexadecimal number with 64 digits.

(Factory setting: [01234567890123456789abcdef])

#### **[DHCP]**

Sets if the automatic acquisition by DHCP is used or to use the DHCP function of the camera.

[OFF]	DHCP is not used.
[CLIENT]	Acquired from DHCP when connecting by setting [TYPE] in [NETWORK PROPERTY] is set to [INFRA(SELECT)] or [INFRA(MANUAL)].
[SERVER]	Enables the DHCP server function of the camera when connecting with [TYPE] in [NETWORK PROPERTY] is set to [DIRECT].

(Factory setting: [SERVER])

#### **[IP ADDRESS]**

Set the IP address when [NETWORK PROPERTY] → [DHCP] → [OFF] or [SERVER] is selected.

(Factory setting: [192.168.0.1])

#### **[SUBNET MASK]**

Set the subnet mask when [NETWORK PROPERTY] → [DHCP] → [OFF] or [SERVER] is selected.

(Factory setting: [255.255.255.0])

#### **[DEFAULT GATEWAY]**

Set the default gateway when [NETWORK PROPERTY] → [DHCP] → [OFF] or [SERVER] is selected.

(Factory setting: [192.168.0.254])

#### **NOTE**

- If you do not use default gateway, set to [0.0.0.0].
- Default gateway setting is invalid when [NETWORK PROPERTY] → [TYPE] → [DIRECT] is selected.

#### **[PRIMARY DNS]**

Sets the primary DNS server in [NETWORK PROPERTY] when [INFRA(SELECT)] or [INFRA(MANUAL)] in [TYPE] is selected and [OFF] is selected for [DHCP].

(Factory setting: [0.0.0.0])

#### **NOTE**

- When [NETWORK PROPERTY] → [TYPE] → [DIRECT] is selected, settings in primary DNS server is invalid.

#### **[SECONDARY DNS]**

Sets the secondary DNS server in [NETWORK PROPERTY] when [INFRA(SELECT)] or [INFRA(MANUAL)] in [TYPE] is selected and [OFF] is selected for [DHCP].

(Factory setting: [0.0.0.0])

#### **NOTE**

- When [NETWORK PROPERTY] → [TYPE] → [DIRECT] is selected, the setting in primary DNS server is invalid.

**[CONNECTION HISTORY]**

Displays the connection history with the wireless access point.  
Maximum of 20 histories that were recently connected can be saved.

[SELECT]	The list of connection history is displayed when [SELECT] is selected. Connection can be made using previous setting by selecting the wireless access point to connect from the list.
[DELETE]	The list of connection history is displayed when [DELETE] is selected. History will be deleted by selecting a history to delete from the list.

**[NETWORK TOOLS]**

**[INITIALIZE]**

Returns the various setting for network to the factory setting.

## Factory setting value of the scene file

### [SCENE FILE SETTINGS] menu

The factory setting values and items that can be selected in [SCENE FILE SETTINGS] differ depending on the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] setting.

• Meaning of the symbols used in the table are as follows.

- —: Not a target.

Item	[MAIN]				
	[SCENE1 (eV-LOOK1)]*	[SCENE2 (eV-LOOK2)]*	[SCENE3 (BC-LOOK1)]*	[SCENE4 (BC-LOOK2)]*	[SCENE5 (HDR)]*

## Handling setting data

### Scene files

#### File structure of the setting data

The scene files of [SCENE1] to [SCENE5] can be saved in the camera memory in accordance to the scene file number.

What can be saved as a scene file is the setting contents of the [SCENE FILE SETTINGS] menu.

Also, the current setting value of the scene files [SCENE1] to [SCENE5] can be saved as a file to the camera memory and the SD card, and that data can be read and used in the camera.

Setting data file structure of the camera is as follows.

\*1 The scene file can be initialized.

Select the [SCENE FILE SETTINGS] menu → [SCENE DATA] → [INITIALIZE].

\*2 Current setting value of each scene file can be individually saved in the camera body. Also, the scene files saved in the camera memory can be read.

Select the [SCENE FILE SETTINGS] menu → [SCENE DATA] → [LOAD]/[SAVE].

\*3 The scene file can be saved in the SD card in the card slot 1. Also, the scene files saved in the SD card can be read.

### Saving the scene file

#### Saving the scene file into the camera memory

Saves the current setting value of the camera into the camera memory.

**1** Select the [SCENE FILE SETTINGS] menu → [SCENE DATA] → [SAVE].

#### Saving the scene file in the SD card

The scene file can be overwritten to a file in the SD card in the card slot 1, or save as a new file.

##### ■ Saving the scene file by overwriting a file in the SD card

Overwrites the file selected in the list of the scene files saved in the SD memory card in the card slot 1 with the current setting value of the camera.

**1** Select the [FILE] menu → [SCENE FILE] → [SAVE].

The list of scene files saved in the SD card in the card slot 1 is displayed.

**2** Select the file to overwrite from the list of scene files.

The file name entry screen and the keyboard are displayed. Leave it as is when overwriting.

**3** Select [Enter].

A confirmation screen is displayed.

**4** Select [SET].

The file is saved.

**Saving the scene file as a new file in the SD card**

Saves the current setting value of the camera into the SD card in the card slot 1 as a new file by specifying the file name.

**1 Select the [FILE] menu → [SCENE FILE] → [SAVE AS].**

The file name entry screen and the keyboard are displayed.

**2 Enter the text to set with the keyboard.****3 Select [Enter].**

A confirmation screen is displayed.

**4 Select [SET].**

The file is saved.

- An error message may be displayed. For details regarding the error message, refer to “Cases indicated by error messages”.

**Reading the scene file**

Reads the scene files saved in the camera memory or the SD card in the card slot 1.

**Reading the scene file from the camera memory****1 Select the [SCENE FILE SETTINGS] menu → [SCENE DATA] → [LOAD].****Reading the scene file from the SD card****1 Select the [FILE] menu → [SCENE FILE] → [LOAD].**

The list of scene files stored in the specified folder in the SD card in the card slot 1 is displayed.

**2 Select the file name for the file to read.****3 Selects if all of the scene files ([SCENE1] to [SCENE5]) are read, or individually read.**

- To read all, select [ALL].
- To read individually, select the scene number to read.

**4 Select [SET].**

The file is read.

- An error message may be displayed. For details regarding the error message, refer to “Cases indicated by error messages”.

**Initialization of the scene file****1 Select the scene file to return to the factory setting in the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN].****2 Select the [SCENE FILE SETTINGS] menu → [SCENE DATA] → [INITIALIZE].**

The confirmation screen is displayed.

**3 Select [YES].**

The selected scene file returns to the factory setting.

**Changing the scene file name**

Changes the name of the scene file.

Only changeable part is the title section of the scene file name. As an example, if the scene file name is [SCENE1 (eV-LOOK1)], only the “eV-LOOK1” part can be changed.

**1 Select the scene file to change the name in the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN].****2 Select the [SCENE FILE SETTINGS] menu → [NAME EDIT].**

The file name entry screen and the keyboard are displayed.

**3 Enter the text to set with the keyboard. (Maximum eight characters)****4 Select [Enter].**

The file name is updated.

**Setup file**

Specified menu can be saved in the SD card in the card slot 1, or read it into the camera from the SD card.

**Saving the setup file**

The setup file can be overwritten to a file in the SD card in the card slot 1, or save as a new file.

**Saving the setup file by overwriting a file in the SD card**

Overwrites the file selected in the list of the setup files saved in the SD memory card with the current setting value of the camera.

**1 Select the [FILE] menu → [SETUP FILE] → [SAVE].**

The list of setup files saved in the SD card in the card slot 1 is displayed.

**2 Select the file to overwrite from the list of setup files.**

The file name entry screen and the keyboard are displayed. Leave it as is when overwriting.

**3 Select [Enter].**

A confirmation screen is displayed.

**4 Select [SET].**

The file is saved.

**Saving the setup file as a new file in the SD card**

---

Saves the current setting value of the camera into the SD card in the card slot 1 as a new file by specifying the file name.

**1 Select the [FILE] menu → [SETUP FILE] → [SAVE AS].**

The file name entry screen and the keyboard are displayed.

**2 Enter the text to set with the keyboard.**

**3 Select [Enter].**

A confirmation screen is displayed.

**4 Select [SET].**

The file is saved.

- An error message may be displayed. For details regarding the error message, refer to “Cases indicated by error messages”.

**Reading the setup file**

Reads the setup file saved in the SD card in the card slot 1.

**1 Select the [FILE] menu → [SETUP FILE] → [LOAD].**

The list of setup files stored in the specified folder in the SD card in the card slot 1 is displayed.

**2 Select the file name for the file to read.**

**3 Select [SET].**

Loading of the file is started. The camera is restarted after reading.

- An error message may be displayed. For details regarding the error message, refer to “Cases indicated by error messages”.
- The file saved by a camera with different firmware version may not be able to read.

## Chapter 5 **Shooting**

---

This chapter describes the basic procedure for recording. This chapter also describes the special recording method.

## Shooting

For shooting, use the following steps.

**1 REC button (camera body)**

**2 REC button (grip)**

### 1 Set the video settings and the audio input.

- Before shooting, the followings must be set or adjusted.
  - Image settings for the brightness function (iris, gain, shutter) and the white balance adjustment function, etc.
  - Audio input settings for audio recording.
  - Adjusting audio recording level

### 2 Start the recording by pressing the REC button.

- There is one REC button each on the camera and the grip.
- The tally lamp is illuminated in red while recording.

### 3 Press the REC button again to stop.

### 4 Check videos recorded.

The last approximately three seconds of the previously shot clip is automatically played back by pressing the USER button with [REC CHECK] assigned.

In this way, you can check whether video has been recorded properly.

- Returns to recording standby after checking.

#### NOTE

- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], recording to an SD card with the camera is not possible.

## Selecting the resolution, codec, and frame rate for recording video

The resolution, codec, and frame rate of the recording video can be selected in the [SYSTEM SETTINGS] menu → [SYSTEM MODE].

- [FREQUENCY]: System frequency
- [SDI RAW]: Resolution (RAW output resolution from the <SDI OUT> terminal)  
When [SDI RAW] is set to anything other than [OFF], [SENSOR MODE], [MAIN PIXEL], and [MAIN CODEC] cannot be set.
- [SENSOR MODE]: Drive mode of the sensor
- [MAIN PIXEL]: Resolution
- [MAIN CODEC]: Recording codec
  - 4:2:0 (8 bits) LongGOP MOV: [420LongGOP 150M], [420LongGOP 100M], [420LongGOP 50M]
  - 4:2:2 (10 bits) LongGOP MOV: [422LongGOP 150M], [422LongGOP 100M], [422LongGOP 50M]
  - 4:2:2 (10 bits) ALL-Intra MOV: [422ALL-I 400M], [422ALL-I 200M], [422ALL-I 100M]
  - AVCHD: [AVCHD PS], [AVCHD PH], [AVCHD HA], [AVCHD PM]
- VFR: Variable frame rate recording function (variable frame rate range)

**When [FREQUENCY] is set to [23.98p]**

Can be set only when [SDI RAW] is set to [OFF].

[SENSOR MODE]	[MAIN PIXEL]	[MAIN CODEC]	VFR

	[1920x1080]	[420LongGOP 100M]	

**When [FREQUENCY] is set to [59.94p]**

Can be set only when [SDI RAW] is set to [OFF].

[SENSOR MODE]	[MAIN PIXEL]	[MAIN CODEC]	VFR
[S35 5.7K]	[4096x2160]	[420LongGOP 150M]	1fps - 60fps
	[3840x2160]	[420LongGOP 150M]	
	[2048x1080]	[422LongGOP 100M]	1fps - 60fps
		[422ALL-I 200M]	
	[1920x1080]	[422LongGOP 100M]	
		[422ALL-I 200M]	
[AVCHD PS]		—	
[1280x720]	[AVCHD PM]	—	
[S35 MIX 2.8K]	[2048x1080]	[422LongGOP 100M]	1fps - 120fps
		[422ALL-I 200M]	
	[1920x1080]	[422LongGOP 100M]	
		[422ALL-I 200M]	
[4/3 CROP&MIX 2.2K]	[2048x1080]	[420LongGOP 100M]	1fps - 240fps
	[1920x1080]	[420LongGOP 100M]	

**When [FREQUENCY] is set to [59.94i]**

Can be set only when [SDI RAW] is set to [OFF].

[SENSOR MODE]	[MAIN PIXEL]	[MAIN CODEC]	VFR
[S35 5.7K]	[1920x1080]	[422LongGOP 50M]	—
		[422ALL-I 100M]	
		[AVCHD PH]	
		[AVCHD HA]	

**When [FREQUENCY] is set to [50.00i]**

Can be set only when [SDI RAW] is set to [OFF].

[SENSOR MODE]	[MAIN PIXEL]	[MAIN CODEC]	VFR
[S35 5.7K]	[1920x1080]	[422LongGOP 50M]	—
		[422ALL-I 100M]	
		[AVCHD PH]	
		[AVCHD HA]	

**Selecting the resolution and frame rate of the RAW output**

Resolution of the RAW output from the <SDI OUT> terminal can be selected in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW].  
When [SDI RAW] is set to anything other than [OFF], [SENSOR MODE], [MAIN PIXEL], and [MAIN CODEC] cannot be set.

[FREQUENCY]	[SDI RAW]	VFR
[23.98p] [24.00p] [29.97p]	[S35 5.7K]	1fps - 30fps
	[CROP 4K]	1fps - 60fps
	[CROP&MIX 2K]	1fps - 240fps
[25.00p]	[S35 5.7K]	1fps - 25fps
	[CROP 4K]	1fps - 50fps
	[CROP&MIX 2K]	1fps - 200fps
[50.00p]	[CROP 4K]	1fps - 50fps
	[CROP&MIX 2K]	1fps - 200fps
[59.94p]	[CROP 4K]	1fps - 60fps
	[CROP&MIX 2K]	1fps - 240fps

 **NOTE**

- When [FREQUENCY] is set to [50.00i]/[59.94i], [SDI RAW] is fixed to [OFF].

## Image quality adjustment

The image quality of the video to be recorded can be adjusted in the camera when the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] → [SCENE1] to [SCENE5] is set.

- Adjust the image quality in the [CAMERA SETTINGS] menu.
- The [SCENE FILE SETTINGS] menu cannot be set when [MAIN] is set to [V-Log].
- It is necessary to use a measuring device such as vector scope to change the setting.
- Meaning of the symbols used in the table are as follows.

- ✓: Can be set.
- : Cannot be set.

Item	The [SCENE FILE SETTINGS] menu → [GAMMA] → [GAMMA SELECT]		
	[V-255570L1] [V-504580L1]	[VIDEO]	[HLG]

[CHROMA]	✓	✓	✓
[MATRIX]	✓	✓	✓
[COLOR CORRECTION]	✓	✓	✓

### [E]

Sets the sensitivity of the video.

#### Dual native ISO

The camera is equipped with dual native ISO, [800 ISO] and [2500 ISO], and two [NATIVE ISO].

By installing the sensitivity switching circuit inside the image sensor, a high sensitivity and low noise [2500 ISO] is realized.

The latitude will decrease according to the value when ISO range lower than [NATIVE ISO] is used.

### [dB]

There are two gain modes of [NORMAL] and [HIGH]. The standard sensitivity equivalent to [NATIVE ISO] is set as 0 dB.

When the gamma curve is [VIDEO], the dynamic range will be 600%, which is lower than [V-Log] or other gamma curve. Therefore, the standard sensitivity will be lower than [V-Log] or other gamma curve.

### [WHITE]

#### [ATW] (auto tracking white balance)

The camera is equipped with the auto tracking white balance (ATW) function that automatically tracks the white balance of images according to the lighting condition.

This function does not guarantee 100% accuracy for the white balance. There is some range in the tracking against the change in the lighting condition or accuracy in the white balance. Take care when using this function.

#### [AWB] (auto white balance)

**1** Place a white pattern in a point where the light condition matches the light source for the subject, and display white in the screen.

**2** Adjust the luminance with the <IRIS> dial.

**3** Select the [CAMERA SETTINGS] menu → [WHITE] → [VALUE] → [AWB MEMORY].

**4** Select the [CAMERA SETTINGS] menu → [WHITE] → [AWB] → [EXECUTE].

- It will operate the same by pressing the USER button assigned with [AWB] (auto white balance).

#### ■ Adjustment value

- The adjusted value is automatically recorded in [AWB MEMORY].

#### ■ White pattern

- A white object (cloth or wall) near the subject may also be used for the white pattern.

- Required size of white pattern is as follows.

- Keep bright spotlights out of the screen.
- The white pattern must be placed at the center of the screen.

### Manually setting the color temperature (setting with [VALUE])

Can be selected from the up to 12 registered color temperatures (white balance).

**1** Select the [CAMERA SETTINGS] menu → [WHITE] → [VALUE].

**2** Select the color temperature.

### [BLACK]

#### [ABB] (auto black balance)

Adjust the auto black balance in following cases.

- When the camera is used for the first time
- When it has past extensive time after used previously
- When the ambient temperature has changed extensively after used previously

**1** Mount the cap on the lens.

- Make sure the light does not get to the image sensor.

**2** Select the [CAMERA SETTINGS] menu → [AUTO BLACK BALANCE] → [ABB] → [EXECUTE].

- Do not remove the lens cap or set the power to < ⏻ > (standby) while [ABB ACTIVE] is displayed on the LCD monitor.

#### Pedestal (standard black level)

**1** Select the [SCENE FILE SETTINGS] menu → [BLACK] → [M.PED]/[R PED]/[G PED]/[B PED].

**[M.PED] (master pedestal):** Adjusts the reference black level of the whole video. The adjusted value is maintained even when the auto black balance is executed.

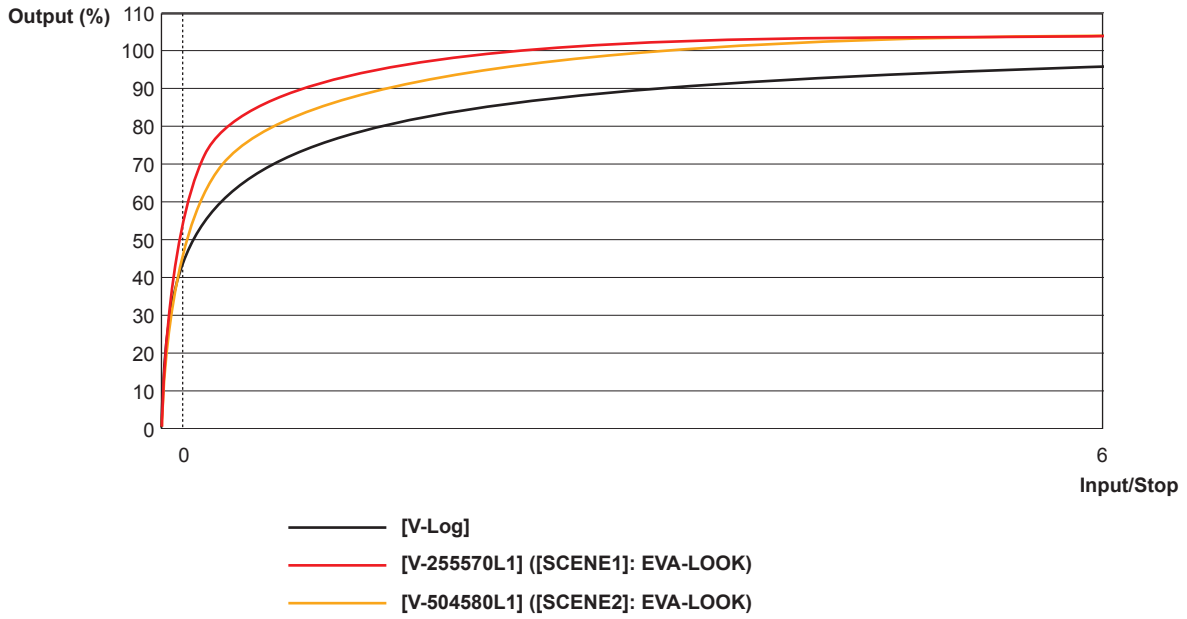

**[R PED] (red signal pedestal), [G PED] (green signal pedestal), [B PED] (blue signal pedestal):** Adjusts the reference black level for each signal. Depending on the setting in the [SCENE FILE SETTINGS] menu → [BLACK] → [PEDESTAL OFFSET], it can be set if the adjusted value is to be maintained or not when the auto black balance is executed.

### [GAMMA]

#### [GAMMA SELECT]

Set to optimize the tone of video.

The items that can be selected differ depending on the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN] setting.

- [V-Log]  
This is a gamma curve that can achieve gradation and wide latitude (exposure range). A grading process after recording is required.
- [V-255570L1]  
This is the EVA-LOOK gamma curve with 14Stop latitude equivalent to [V-Log].  
The rise is equivalent to approximately 2.5 times, and the gamma factor is 0.55, which means up to 70%.  
This is a setting focused on contrast.

It is recommended to shoot at 40% to 55% for face tone.

• [V-504580L1]

This is the EVA-LOOK gamma curve with 14Stop latitude equivalent to [V-Log].

The rise is equivalent to approximately 5.0 times, and the gamma factor is 0.45, which means up to 80%.

This is a setting focused on soft texture.

It is recommended to shoot at 40% to 60% for face tone.

• [VIDEO]

This is the BroadCast-LOOK gamma curve with 600% dynamic range equivalent to the generally used video camera.

• [HLG]

this is the hybrid log gamma curve with wide dynamic range of 1200%.

The color range equivalent to BT.2020 is automatically set.

■ When [MAIN] is set to [V-Log]

[GAMMA] will be set to [V-Log].

■ When [MAIN] is set to [SCENE1]/[SCENE2]/[SCENE3]/[SCENE4]/[SCENE5]

1 Select the [SCENE FILE SETTINGS] menu → [GAMMA] → [GAMMA SELECT].

2 Select one from [V-255570L1]/[V-504580L1]/[VIDEO]/[HLG].

[MASTER GAMMA]

This can be set when the [SCENE FILE SETTINGS] menu → [GAMMA] → [GAMMA SELECT] → [VIDEO] is selected.

Fine adjusts the entire gamma curve.

[BLACK GAMMA]

This can be set when the [SCENE FILE SETTINGS] menu → [GAMMA] → [GAMMA SELECT] → [VIDEO]/[HLG] is selected.

■ [BLACK GAMMA]

Sets the gamma curve compression and expansion of dark area.

Dark area is compressed in the negative side, and expanded in positive side.

■ [B.GAMMA RANGE]

Sets the maximum of compression and expansion in [BLACK GAMMA].

[KNEE]

This function sets the compression of video signals to prevent halation in images.

The dynamic range and compression rate of the video signal change depending on the setting.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

[KNEE MODE]	[KNEE POINT]	[KNEE SLOPE]
[D RANGE]	Fig. 1 The dynamic range that can be represented will not change.	Fig. 2 The dynamic range that can be represented will change.
[PRESS]	Fig. 3 The dynamic range that can be represented will change.	Fig. 4 The dynamic range that can be represented and the compression rate of the signal will change.

**[KNEE MODE] (setting for knee operation mode)**

**1** Select the [SCENE FILE SETTINGS] menu → [KNEE] → [KNEE SW] → [ON].

**2** Select the [SCENE FILE SETTINGS] menu → [KNEE] → [KNEE MODE] → [D RANGE]/[PRESS].

**[D RANGE]:** Determines the dynamic range that can be represented by the [KNEE SLOPE] value. The value of dynamic range that can be represented does not change even when the value of [KNEE POINT] changes.

**[PRESS]:** Determines the signal compression rate by the [KNEE SLOPE] value. The value of the dynamic range that can be represented changes when the [KNEE POINT] value changes.

■ **[KNEE POINT] (knee point position setting)**

**1** Select the [SCENE FILE SETTINGS] menu → [KNEE] → [KNEE POINT].

**2** Sets the position of the knee point.

■ **[KNEE SLOPE] (setting for knee inclination)**

**1** Select the [SCENE FILE SETTINGS] menu → [KNEE] → [KNEE SLOPE].

**2** Sets the knee inclination.

**[HLG KNEE]**

Sets to compress the video signal to prevent the halation in the image during HLG.

**[KNEE MODE] (setting for knee operation mode)**

**1** Select the [SCENE FILE SETTINGS] menu → [HLG KNEE] → [KNEE SW] → [ON].

■ **[KNEE POINT] (knee point position setting)**

**1** Select the [SCENE FILE SETTINGS] menu → [HLG KNEE] → [KNEE POINT].

**2** Sets the position of the knee point.

■ **[KNEE SLOPE] (setting for knee inclination)**

**1** Select the [SCENE FILE SETTINGS] menu → [HLG KNEE] → [KNEE SLOPE].

**2** Sets the knee inclination.

**[WHITE CLIP]**

Sets so the brightest part of the video signal does not get higher than a specific level.

**1** Select the [SCENE FILE SETTINGS] menu → [WHITE CLIP] → [SW] → [ON].

**2** From the [SCENE FILE SETTINGS] menu → [WHITE CLIP] → [LEVEL], set the level.

**[DETAIL]**

Sets the intensity of the outline to represent the image.

It can have soft representation or sharp representation, but then again, it can also have an effect to roughen the entire video by enhancing the noise or edge.

To prevent the whole image to become rough, adjust so that the detail effect will remain in the area to enhance the detail, but to hold back the detail effect in the area that does not require enhancement.

**1** Select the [SCENE FILE SETTINGS] menu → [DETAIL] → [SW] → [ON].

**2** Set the [SCENE FILE SETTINGS] menu → [DETAIL] → [CORING]/[MASTER LEVEL]/[FREQUENCY].

**[CORING]:** Sets the level of signal (including noise) not to activate the detail effect.

**[MASTER LEVEL]:** Sets the level of the detail effect of the whole part.

**[FREQUENCY]:** Sets the thickness of the detail as a whole.

**[SKIN DETAIL]**

A function to make human skin look smoother.

**1** Select the [SCENE FILE SETTINGS] menu → [SKIN DETAIL].

**2** Set one of [SKIN DTL1]/[SKIN DTL2]/[SKIN DTL3] to [ON].

[SKIN DTL1]/[SKIN DTL2]/[SKIN DTL3] can be used in conjunction.

**[CHROMA]**

Sets the color saturation.

**1** Select the [SCENE FILE SETTINGS] menu → [CHROMA] → [LEVEL].

Sets the chroma level of  $P_R$  and  $P_B$  signals. The distance from the center (no color) is increased or decreased for the entire image when the vector scope is used.

**[MATRIX]**

The matrix is set to be optimized in accordance with the gamma setting.

Change the setting value relative to the matrix in accordance with the gamma setting to set representation of the color of the image.

The change in color against each axis of matrix is as following figure.

- The bold line in the figure is the reference line for each axis of matrix. The color above the bold line does not change.

**[COLOR CORRECTION]**

This function sets color saturation and phase.

This affects individually against the 16 phases of the image.

It can be set to individual color hue.

- R: Red
- P1: (YI-R)-R
- P2: (YI-R)
- P3: YI-(YI-R)
- YI: Yellow
- P4: (G-YI)-YI
- P5: (G-YI)
- G: Green
- P6: (Cy-G)
- Cy: Cyan
- P7: (B-Cy)
- B: Blue
- P8: (Mg-B)
- Mg: Magenta
- P9: (R-Mg)
- P10: R-(R-Mg)

**1** Select the [SCENE FILE SETTINGS] menu → [COLOR CORRECTION] → [SW] → [ON].

**2** Select the [SCENE FILE SETTINGS] menu → [COLOR CORRECTION] → [PARAM], and set the color saturation and hue for each item.

## Variable frame rate (VFR) recording function

It is possible to acquire smooth slow motion or quick motion vide by shooting with a different frame rate from the frame rate to play back.

### Variable frame rate (VFR)

Allows the high-speed shooting from 1fps to maximum of 240fps.

**1 From the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SENSOR MODE], select the resolution and codec of the recording video, and the frequency that will become the reference frame rate.**

- For the combination that can be set, refer to “Selecting the resolution, codec, and frame rate for recording video”.
- The range of the frame rate that can perform high-speed shooting differs depending on the [SENSOR MODE] setting.
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the range of frame rate that can perform high-speed shooting changes depending on the [SDI RAW] setting.  
For the combination that can be set, refer to “Selecting the resolution and frame rate of the RAW output”.

**2 Select the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] → [ON].**

- This can also be set with the multial. Refer to “Functions assigned to USER buttons”.

**3 From the [CAMERA SETTINGS] menu → [FPS] → [VALUE], set the frame rate in accordance with the shooting condition.**

- This can also be set with the multial. Refer to “Functions assigned to USER buttons”.
- An arbitrary frame rate can be added/changed/deleted in the [CAMERA SETTINGS] menu → [FPS] → [ADD]/[EDIT]/[DELETE].

**4 Press the REC button.**

Variable frame rate recording is started.

■ **Normal shooting mode**

The 4K/UHD video is generated using all the pixels in the image sensor.

2K/FHD video is also generated from that video.

The high-speed shooting up to 60fps is possible.

Select [S35 5.7K] for [SENSOR MODE].

■ **Pixel mixing shooting mode**

The 2.8K pixel mixing read is performed from all the pixels of the image sensor, and generates the 2K/FHD video.

The high-speed shooting up to 120fps is possible.

Select [S35 MIX 2.8K] for [SENSOR MODE].

- The angle of view is the same as the normal shooting mode.

■ **Cut-out shooting mode**

Cuts out the image circle of Four Thirds from the center of the image sensor, and performs the pixel mixing read of 2.2K. 2K/FHD video is also generated from that video.

The high-speed shooting up to 240fps is possible.

Select [4/3 CROP&MIX 2.2K] for [SENSOR MODE].

- The angle of view will change from the normal shooting mode.

 **NOTE**

- Recording of audio is not possible with the variable frame rate shooting. However, audio is recorded when the frame rate is set to same as the system frequency.
- The screen may be disrupted or become dark when the frame rate setting is changed.
- The frame rate cannot be changed while recording.
- The [REC SETTINGS] menu → [TC] → [FREE/REC RUN] is fixed to [REC RUN].
- The recording is paused when ten hours has past from the time the recording was started. The recording is automatically resumed after few seconds. When performing a high-speed shooting, the recording time will be shorter than 10 hours depending on the ratio of the frame rate of the recording format and the variable frame rate. The recording will stop in 5 hours when [FREQUENCY] is set to [24.00p], and [FPS] is set to [48fps].
- For recording limitation during the variable frame rate shooting, refer to “Recording function that cannot be used simultaneously”.
- It may take time to stop recording even if recording is stopped right after recording is started.  
When [FREQUENCY] is set to [59.94p] and [FPS] is set to [1fps], recording is continued for maximum of one minute until the length of the clip after shooting becomes one second.

## Special recording function

Special recording such as pre-recording or relay recording is possible by setting the menu.

### Pre-recording

Records the video and audio from specific time before the operation to start the recording.

The pre-recording time varies depending on the setting of the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL]/[MAIN CODEC].

- When [MAIN PIXEL] is set to [1280x720], [1920x1080], or [2048x1080]: Approximately ten seconds.
- When [MAIN CODEC] is set to [422ALL-I 400M]: Approximately three seconds.
- Other than above: Approximately five seconds.

#### 1 Select the [REC SETTINGS] menu → [PRE REC] → [ON].

[P] is displayed in the pre-recording status display of the VIEW and HOME screens.

#### 2 Press the REC button.

#### NOTE

- The video and audio may not be able to record for specific time before in following cases.
  - Immediately after the power is set to <|> (ON)
  - Right after opening the menu
  - Immediately after the SD card is inserted
  - Right after playing back the recorded video
  - Immediately after closing the thumbnail screen
  - Until the writing to the SD card is completed after stopping the recording
  - Immediately after slave locking to an external time code
  - Immediately after switching the card slot to record by pressing the USER button with [SLOT SEL] assigned
- When [PRE REC] is set to [ON], the [REC SETTINGS] menu → [TC] → [FREE/REC RUN] is fixed to [FREE RUN].
- The pre-recording is cancelled once when three hours has past without starting the recording.
- For recording limitation of the pre-recording, refer to "Recording function that cannot be used simultaneously".
- Pre-recording cannot be performed if the remaining capacity of the SD card is less than one minute.

### Relay recording

Two SD cards can be inserted into the two card slots, and recording can continue on the second SD card when the remaining recordable capacity of the other SD card is exhausted.

#### 1 During recording

#### 2 Automatically switch the recording target card slot

#### 3 Replace with a different recordable SD card

#### 1 Select the [REC SETTINGS] menu → [2 SLOTS FUNC.] → [RELAY REC].

[RELAY] is displayed in the special recording function display of the HOME screen.

A slanted line is displayed on the [RELAY] display when the relay recording is not possible, such as the SD card is not inserted in either of the two card slots.

#### 2 Press the REC button.

The recording status of the recording target card slot in the VIEW screen is displayed black and white inverted.

- When remaining recordable capacity of one of the SD card is exhausted and the relay recording is started, the recording target will switch to the other SD card. The recording status of the card slot that became the recording target is displayed black and white inverted. It can record to three or more SD card. Replace the SD card with no more remaining recordable capacity after the recording target has switched.
- To change the recording target card slot before starting the recording, press the <SLOT SEL> button. This will not operate during recording.

#### NOTE

- It may take some time to recognize the SD card when the SD card is inserted. When recording to three or more SD cards by replacing them while recording, replace them while there are sufficient remaining recordable capacity on the SD card that is recording.
- Switching of the recording target cannot be performed when the remaining recordable capacity of the relaying SD card is less than one minute.
- The maximum continuous recording time for relay recording is ten hours.

- The recording is stopped once when the recording time of relay recording exceeds ten hours. The recording is automatically resumed after few seconds.
- For recording limitation of the relay recording, refer to “Recording function that cannot be used simultaneously”.

## Simultaneous recording

Insert SD cards into two card slots, and record the same video onto two SD cards.

### 1 Select the [REC SETTINGS] menu → [2 SLOTS FUNC.] → [SIMUL REC].

[SIMUL] is displayed in the special recording function display of the HOME screen.

A slanted line is displayed on the [SIMUL] display when the simultaneous recording is not possible, such as the SD card is not inserted in either of the two card slots.

### 2 Press the REC button.

[SIMUL] is displayed in the two slot function display of the VIEW screen.

- The simultaneous recording will stop when remaining recordable capacity of one of the SD card is exhausted. A diagonal line is displayed in the [SIMUL] display when simultaneous recording is not possible. To start the simultaneous recording again, replace the SD card that has ran out of the remaining recordable capacity with another SD card, and press the REC button.
- When the REC button is pressed without replacing the SD card, a standard recording to the SD card with remaining recordable capacity will be performed.

### NOTE

- It is recommended to use the SD cards with the same Speed Class or capacity for simultaneous recording. The recording may stop due to insufficient speed when SD cards with different Speed Classes or capacities are used. If the recording is stopped, the video right before stopping may become invalid recording.
- Start the recording after both two SD cards are recognized. When the recording is started before both SD cards are recognized, it will perform standard recording on one of the SD card that was recognized. The camera confirms the status of the SD card every time the recording is completed. If both cards are recognized at that time, it will perform the simultaneous recording from the next recording.
- When recording in one of the SD card is stopped with a recording error during the simultaneous recording, the recording to the other SD card will continue.
- If there is remaining recordable capacity on one of the SD card after completing the simultaneous recording, the SD card with remaining recordable capacity will automatically become the recording target. Standard recording will start when the REC button is pressed.
- If only one SD card is inserted even if it is set to simultaneous recording, it will perform standard recording.
- Once the simultaneous recording is completed, [DEL LAST CLIP] (final clip delete function) assigned to the USER button will not operate.
- For the folder name and the file name when performing simultaneous recording in MOV format, refer to “Handling of the recording data”.
- For recording limitation of the simultaneous recording, refer to “Recording function that cannot be used simultaneously”.

## Interval recording

The camera will record one frame at each set time interval.

### 1 Select the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] → [INTERVAL].

[INTRVL] is displayed in the special recording function display of the VIEW screen and the HOME screen.

- When the recording mode is set to AVCHD, or when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] is set to [50.00i]/[59.94i], this cannot be selected.

### 2 From the [REC SETTINGS] menu → [REC FUNCTION] → [INTERVAL TIME], set the time.

### 3 Press the REC button.

- [I-REC] is displayed in red in the special recording function display of the VIEW screen.
- The camera will repeat the operation of one frame recording at set time interval.
- To stop recording, press the REC button.

- To clear the setting, set the [REC SETTINGS] menu → [REC FUNCTION] → [REC MODE] to [NORMAL].
- The setting is not cleared even when the power is turned off.

 **NOTE**

---

- Audio is not recorded.
- Recorded data (data recorded until recording was stopped) is included in one clip.
- The [REC SETTINGS] menu → [TC] → [FREE/REC RUN] is fixed to [REC RUN].
- The [REC SETTINGS] menu → [TC] → [DF/NDF] is fixed to [NDF].
- [SDI REC REMOTE] and [HDMI REC REMOTE] will not operate.
- If the length of the clip is less than three seconds when the recording is stopped, the image of the final frame will be recorded to make the length of the clip to three seconds.
- The recording is stopped once when the length of the clip exceeds ten hours in the interval recording. The recording is automatically resumed after few seconds.
- For recording limitation of the interval recording, refer to “Recording function that cannot be used simultaneously”.

## IR shooting

A night time shooting using the IR light can be performed.

### ■ Assigning [IR SHOOTING] to the USER button

**1** Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [IR SHOOTING].

Set so enable/disable of the IR shooting can be switched with an arbitrary USER button.

### ■ Performing IR shooting

**1** Press the USER button that [IR SHOOTING] is assigned.

The camera will enter the IR shooting mode.

**2** Press the REC button.

IR shooting is started.

 **NOTE**

---

- It can also be set with the [CAMERA SETTINGS] menu → [IR SHOOTING].

## Convenient shooting functions

### Zebra patterns display

The camera can display two types of zebra patterns to the output image from the <LCD> terminal.

#### 1 Select the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [ZEBRA] → [ON].

- Factory setting: [OFF]

### Setting the detection level

#### 1 Set the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → each item.

Item	Description of settings
[ZEBRA1 DETECT]	Sets the detection level of zebra pattern 1. [0%]...[109%] (Factory setting: [80%])
[ZEBRA2 DETECT]	Sets the detection level of zebra pattern 2. [0%]...[109%] (Factory setting: [100%])
[ZEBRA2]	Enables/disables zebra pattern 2 and selects [SPOT]. [ON], [SPOT], [OFF] (Factory setting: [OFF])

#### ■ Display area of the zebra pattern

The display area of the zebra pattern varies depending on the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] setting.

When [SPOT] is selected in [ZEBRA2], the area corresponding to the [ZEBRA1 DETECT] setting value to the [ZEBRA2 DETECT] setting value is displayed in zebra pattern.

#### NOTE

- The zebra pattern cannot be recorded.
- When the focus square display of the focus assist function is enabled, the zebra pattern is not displayed while displaying the color bars.

### Displaying the center marker

A center marker can be displayed.

#### 1 From the [OUTPUT SETTINGS] menu → [LCD MARKER] → [CENTER MARKER], select the type of the center marker .

- The center marker is not displayed when [OFF] is selected.

### Displaying the safety zone marker

A safety zone marker can be displayed.

#### 1 From the [OUTPUT SETTINGS] menu → [LCD MARKER] → [SAFETY MARKER], select the type of frame.

- The safety zone marker is not displayed when [OFF] is selected.

### Setting the size of the frame.

- 1 Select the size of the frame in the [OUTPUT SETTINGS] menu → [LCD MARKER] → [SAFETY AREA].

### Displaying frame marker

A frame marker can be displayed.

- 1 From the [OUTPUT SETTINGS] menu → [LCD MARKER] → [FRAME MARKER], select the angle of view.
  - The frame marker is not displayed when [OFF] is selected.

### Setting the display color

- 1 From the [OUTPUT SETTINGS] menu → [LCD MARKER] → [FRAME COLOR], select the display color.

#### NOTE

- The marker cannot be recorded.
- When the enlarged display function and the focus square display of the focus assist function is enabled and while displaying the color bars, the marker is not displayed.
- Displays/hides of the marker can be temporarily switched by pressing the USER button with [LCD MARKER] assigned.
- The marker can be displayed in the output image from the <SDI OUT> terminal by setting in the [OUTPUT SETTINGS] menu → [SDI OUT] → [MARKER DISP] → [ON], and setting [SDI/HDMI MARKER]. Similarly, the marker can be displayed in the output image of the <HDMI> terminal by setting the [OUTPUT SETTINGS] menu → [HDMI OUT] → [MARKER DISP] → [ON].

### One-push auto focus function

The one-push auto focus function is a function to automatically adjust the focus.

The focus area is 1/3 of the screen height and 1/4 of the width.

#### ■ Assign [ONE PUSH AF] to the USER button

Assign the one-push auto focus function so that it can be used with an arbitrary USER button.

- 1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [ONE PUSH AF].
  - [ONE PUSH AF] is assigned to the <USER 1> button as a factory setting.

#### ■ Using the one-push auto focus function

- 1 Set the focus switch on the lens to AF.
- 2 Press the USER button to which [ONE PUSH AF] is assigned.

#### NOTE

- The one-push auto focus function operates only when a lens compatible with the auto focus is mounted.

### Focus assist function

The focus assist function enables you to focus the target easily.

The recording image on the LCD monitor can be displayed enlarged, or the focused area can be visually enhanced.

It is also possible to make the focusing easier by changing the aperture of the iris to decrease the depth of field.

The focus assist function is displayed only on the LCD monitor.

### Enlarged display function

Center of the recording image is displayed enlarged to make it easier to focus.

#### ■ Assigning [EXPAND] to the USER button

Set so enable/disable of the enlarged display function can be switched with an arbitrary USER button.

- 1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [EXPAND].
  - [EXPAND] is assigned to the <USER 8> button as a factory setting.

■ Using the enlarged display function

1 Press the USER button that [EXPAND] is assigned.

Press the USER button again to return to the normal display.

Setting the mode for enlarged display function

1 Select the mode for enlarged display function in the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [EXPAND MODE].

[10SEC]: Disables the enlarged display function after ten seconds have elapsed.

[HOLD]: The enlarged display function is enabled until the USER button assigned with [EXPAND] is pressed again.

[UNTIL REC]: Enables the enlarged display function until starting the recording operation.

Setting the enlargement rate

1 From the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [EXPAND VALUE], select the enlargement rate.

- The enlargement rate can be selected from [x2], [x3], or [x4].

Setting the enlargement position

The enlargement position can be selected from nine positions when the enlarged display function is enabled.

In case of the multial or grip multial: The enlarged position will move every time the multial is turned. It will return to center when the multial is pressed.

In case of touching the LCD monitor: The enlarged position will move by touching the vertical and horizontal arrow markers on the LCD monitor.

 NOTE

- The enlarged display cannot be recorded.
- It will not perform enlarged display while displaying the color bars.
- Some of the displays such as marker will be hidden temporarily during enlarged display.

Peaking display/focus square display

The peaking display will outline the contour of the focused image in red, green, or white.

The focus square display will display the degree of how focused with the size of a square.

■ Assigning [PEAK./SQUARES F.A.] to the USER button

Set this function so that the peaking display and the focus square display can be enabled/disabled with an arbitrary USER button.

1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [PEAK./SQUARES F.A.].

- [PEAK./SQUARES F.A.] is assigned to the <USER 2> button as a factory setting.

■ Displaying peaking display/focus square display

1 Press the USER button that [PEAK./SQUARES F.A.] is assigned.

Press the USER button again to return to the normal display.

- When the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [PEAK./SQUARES MODE] → [PEAK./SQUARES] is set, the display will switch every time the USER button is pressed.

Setting the peaking display/focus square display

1 From the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [PEAK./SQUARES MODE], select the type of display.

[PEAKING]: Enables the peaking display.

[SQUARES]: Enables the focus square display.

[PEAK./SQUARES]: Enables peaking display and the focus square display. It will switch in the order of peaking display, focus square display, and no display every time the USER button with [PEAK./SQUARES F.A.] assigned is pressed.

Setting the peaking level

Sets the intensity of the peaking display.

1 From the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [PEAKING LEVEL], select the intensity of the peaking display.

- The intensity of the peaking display can be selected from [LOW], [MID], or [HIGH].

Setting the color for peaking display

Sets the color of the peaking display.

1 From the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [PEAKING COLOR], select the color of the peaking display.

- The color of the peaking display can be selected from [RED], [GREEN], or [WHITE].

### How to view the focus square display

Adjust the focus so that the square size displayed in the area of the subject to be focused becomes the largest.

When focused on the doll

When the panel is focused

#### NOTE

- The peaking display/focus square display cannot be recorded.
- The peaking display/focus square display is not displayed while displaying the color bars.
- Some of the displays such as marker will be hidden temporarily during displaying the focus square function.

### Monochrome display

- 1 Select the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [BLACK & WHITE] → [ON].

#### NOTE

- The monochrome display can be enabled while the peaking display and the focus square display is operating.  
Select the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [BLACK & WHITE] → [DURING PEAK./SQUARES].

### Open iris focus assist function

This is a function to make focusing easier by decreasing the depth of field by opening the iris. At the same time, the brightness is kept constant by operating the shutter function.

The aperture is adjusted automatically.

#### ■ Assigning [OPEN IRIS F.A.] to the USER button

Assign the open iris focus function so that it can be used with an arbitrary USER button.

- 1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [OPEN IRIS F.A.].
  - [OPEN IRIS F.A.] is assigned to the <USER 9> button as a factory setting.

#### ■ Using the open iris focus assist function

- 1 Press the USER button that [OPEN IRIS F.A.] is assigned.
  - Press the USER button again to return to the normal display.

### Setting the operation time

- 1 From the [OUTPUT SETTINGS] menu → [LCD FOCUS ASSIST] → [OPEN IRIS MODE], select the operation time.
  - The operation time can be selected from [10SEC] or [30SEC].
  - the open iris focus assist function is automatically cancelled when the set time has elapsed.
  - The open iris focus assist function is forced to cancel when the recording is started. Image during the cancel may be included around the beginning of the recorded video.

### Electronic image stabilization function

Shaking of the camera can be reduced by using the electronic image stabilization function when shooting by hand-holding the camera.

### Enabling/disabling the electronic image stabilization function

- 1 Press the <E.I.S.> button.

 is displayed in the LCD monitor when the electronic image stabilization is enabled.

- Natural image can be acquired by disabling the electronic image stabilization function when using a tripod.

#### NOTE

- This function will not operate if set to [4/3 CROP&MIX 2.2K] in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SENSOR MODE].
- When the [CAMERA SETTINGS] menu → [FPS] → [VFR SW] is set to [ON], and under the low frame rate setting of 24fps or lower, the effect of image stabilization becomes weaker as the frame rate goes lower.
- This function will not operate when [D.ZOOM] assigned to the USER button is operating.
- The electronic image stabilization of the camera will not operate when the optical image stabilization on the lens is operating.
- The effect of the correction disappears with the EF lens that the focal distance is out of 8 mm to 200 mm range.
- When the [CAMERA SETTINGS] menu → [E.I.S.] → [ZOOM POSITION DATA] → [AUTO] is set, an EF lens supporting the acquisition of the focal distance with the communication between the camera and the lens is required.
- The electronic image stabilization will not operate properly when the [CAMERA SETTINGS] menu → [E.I.S.] → [ZOOM POSITION DATA] → [MANUAL] is set, and the distance that is different from the focal distance of the EF is set in [ZOOM POSITION VALUE].
- This does not operate when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

## Waveform monitor function

Waveform of the image can be displayed.

### ■ Assigning [WFM] to the USER button

Set this function so that the waveform monitor can be displayed/hidden with an arbitrary USER button.

#### 1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [WFM].

- [WFM] is assigned to the <USER 5> button as a factory setting.

### ■ Displaying the waveform monitor

#### 1 Press the USER button that [WFM] is assigned.

Press the USER button again to return to the normal display.

- The display is switched every time the USER button is pressed when the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [WFM MODE] → [WAVE/VECTOR] is set.

## Setting the displaying of the waveform monitor

Displaying of the waveform and the vector can be switched.

#### 1 From the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [WFM MODE], select the displaying of waveform monitor.

[WAVE]: Displays the waveform.

[VECTOR]: Displays the vector.

[WAVE/VECTOR]: Displays the waveform and the vector. It will switch in the order of waveform, vector, and no display every time the USER button with [WFM] assigned is pressed.

- The waveform monitor is displayed only on the LCD monitor.
- Display position of the waveform monitor is bottom right of the LCD monitor.

## Setting the transmittance

The transmittance of the waveform monitor can be set.

#### 1 From the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [WFM TRANSPARENCY], select the transmittance.

- The transmittance can be selected from [0%], [25%], or [50%].

#### NOTE

- The waveform monitor cannot be recorded.
- This is not displayed during enlarged display and focus square of the focus assist function are displayed.
- The waveform monitor is automatically displayed when setting some of the menu to perform the image quality adjustment.

## Digital zoom function

### ■ Assigning [D.ZOOM] to the USER button

Set so enable/disable of the digital zoom function can be switched with an arbitrary USER button.

#### 1 Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [D.ZOOM].

### ■ Using the digital zoom function

#### 1 Press the USER button that [D.ZOOM] is assigned.

Press the USER button again to return to the normal display.

#### NOTE

- The enlargement rate is fixed to 1.4 times.
- This can achieve high quality image compared to the common digital zoom function using the pixel interpolation since it is using the 4K pixels at the center of the 5.7K sensor.
- This will not operate if set to [4/3 CROP&MIX 2.2K] in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SENSOR MODE].
- This does not operate when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

## Level gauge

A level gauge that indicates the horizontal and vertical inclinations of the camera can be displayed on the LCD monitor.

The line of the level gauge is displayed in orange while the camera is inclined. The line of the level gauge will change from orange to light blue, and then to white when the inclination of the camera is corrected. It will indicate up to approximately 30° in horizontal direction, and 30° in vertical direction.

#### 1 Select the [OUTPUT SETTINGS] menu → [LCD LEVEL GAUGE] → [LEVEL GAUGE] → [ON].

 NOTE

- The display of level gauge cannot be recorded.
- The level gauge is not displayed when the enlarged display function of the focus assist function is enabled, or when displaying the color bars.
- The level gauge may not display correctly while moving the camera.
- The level gauge may not display correctly when shooting with the camera inclined excessively upward or downward.
- Displays/hides of the level gauge can be switched by pressing the USER button assigned with [LEVEL GAUGE].
- Current horizontal and vertical direction can be set as the reference value of the level gauge by pressing the USER button assigned with [LEVEL GAUGE RESET]. To restore the set value, set with the [OUTPUT SETTINGS] menu → [LCD LEVEL GAUGE] → [LEVEL GAUGE RESET].

**Color bars**

Color bars can be displayed. This is useful for image quality adjustment of a TV or an external monitor.

**■ Assigning [COLOR BARS] to the USER button**

Set this function so that the color bars can be displayed/hidden with an arbitrary USER button.

**1** Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER1] to [USER9] → [COLOR BARS].

- [COLOR BARS] is assigned to the <USER 5> button as a factory setting.

**■ Displaying the color bars****1** Press the USER button that [COLOR BARS] is assigned.

Press the USER button again to return to the normal display.

 NOTE

- This does not operate when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**Setting the type of color bars****1** From the [OUTPUT SETTINGS] menu → [COLOR BARS] → [COLOR BARS TYPE], select type of color bars.

- The type of color bars can be selected from [SMPTE] or [FULL].

 NOTE

- A smear may occur depending on the output resolution.

**Setting the audio test signal output**

Sets if the audio test signal (tone signal of rating level 1 kHz) can be output or not when the color bars are displayed.

**1** Select the [OUTPUT SETTINGS] menu → [COLOR BARS] → [TEST TONE] → [ON].

## Audio input

The camera can record two channels of audio.

The audio to input to each channel can be switched to the built-in microphone, an external microphone, or a connected audio device.

### Switching the audio input

#### ■ Audio recording format

The audio recording format such as compression format varies depending on the recording mode.

Recording mode	Recording format	Sampling rate/bit
MOV	Linear PCM (LPCM)	48 kHz/24 bit
AVCHD	Dolby Audio™	48 kHz/16 bit

#### ■ Selecting audio input signals

The recorded input signal varies depending on the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH1 IN SELECT]/[CH2 IN SELECT] setting.

Item		Input signal to be recorded	
[CH1 IN SELECT]	[CH2 IN SELECT]	Audio channel 1	Audio channel 2
[INT(L)]	[INT(R)]	Built-in microphone <L>	Built-in microphone <R>
	[INPUT1]	Built-in microphone <L>	<AUDIO INPUT 1> terminal
	[INPUT2]	Built-in microphone <L>	<AUDIO INPUT 2> terminal
[INPUT1]	[INT(R)]	<AUDIO INPUT 1> terminal	Built-in microphone <R>
	[INPUT1]	<AUDIO INPUT 1> terminal	<AUDIO INPUT 1> terminal
	[INPUT2]	<AUDIO INPUT 1> terminal	<AUDIO INPUT 2> terminal

### When using the built-in microphone

**1** Select the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH1 IN SELECT] → [INT(L)].

**2** Select the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH2 IN SELECT] → [INT(R)].

#### NOTE

• To decrease the wind noise of the microphone, select the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH1 MIC LOWCUT]/[CH2 MIC LOWCUT] → [ON].

### When using an audio device or an external microphone

**1** Connect an audio device or an external microphone to the <AUDIO INPUT 1>/<AUDIO INPUT 2> terminal.

**2** Set each item in the [AUDIO SETTINGS] menu → [AUDIO INPUT].

Connected device	[AUDIO INPUT]			
	[INPUT1 LINE/MIC SEL]/ [INPUT2 LINE/MIC SEL]	[INPUT1 MIC POWER]/ [INPUT2 MIC POWER]	[INPUT1 MIC LEVEL]/ [INPUT2 MIC LEVEL]*1	[INPUT1 LINE LEVEL]/ [INPUT2 LINE LEVEL]*2
Audio device	[LINE]	Disabled	Disabled	[4dB], [0dB]
External microphone	[MIC]	[OFF]	[-40dB], [-50dB], [-60dB]	Disabled
External microphone (with power supply)	[MIC]	[ON]	[-40dB], [-50dB], [-60dB]	Disabled

\*1 Factory setting: [-60dB]

\*2 Factory setting: [4dB]

#### NOTE

• When using a super-directional microphone AG-MC200G (optional), set [INPUT1 MIC LEVEL]/[INPUT2 MIC LEVEL] to [-50dB].

### Adjusting the audio recording level

There are manual adjustment and automatic adjustment as the adjustment method of the audio recording level.

#### Automatic adjustment of the recording level

**1** Set the <CH1>/<CH2> switch to <AUTO>.

- Audio channel 1 and audio channel 2 can individually set.
- Following settings are disabled when the <CH1>/<CH2> switch is set to <AUTO>.
  - Adjustment of the recording level by the <AUDIO LEVEL CH1>/<AUDIO LEVEL CH2> dial
  - The [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH1 LIMITER]/[CH2 LIMITER] setting

## Manual adjustment of the recording level

**1** Set the <CH1>/<CH2> switch to <MANU>.

**2** Adjust the recording level with the <AUDIO LEVEL CH1>/<AUDIO LEVEL CH2> dial.

- When the input level of audio exceeds 0 dB, the level display exceeding 0 dB is displayed in red in the audio level meter in the HOME screen. This is indicating that the input volume is too high.

Adjust so that the maximum value of the audio level does not exceed 0 dB.

### NOTE

- By setting the <CH1>/<CH2> switch to <MANU>, setting in the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [CH1 LIMITER]/[CH2 LIMITER] is enabled.

## Recording standard level

The recording standard level can be set.

**1** Select the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [HEAD ROOM] → [18dB]/[20dB].

## Confirming the audio input level

Input level of the audio can be confirmed in the HOME screen.

## Monitoring the audio

Audio recorded with the camera can be heard with a speaker or headphones.

Audio is not output from the speaker during shooting.

## Setting the output audio

Sets the audio channel and the format to be output from the headphone terminal.

**1** Select the [AUDIO SETTINGS] menu → [AUDIO OUTPUT] → [MONITOR OUT].

**2** Select the type of audio.

[CH1]: Outputs the signal for audio channel 1 in monaural.

[CH2]: Outputs the signal for audio channel 2 in monaural.

[STEREO]: Outputs the signals for audio channel 1 and audio channel 2 in stereo.

[MIX]: Outputs the signals for audio channel 1 and audio channel 2 mixed into monaural.

## Setting the audio delay

The audio from the headphone terminal can be delayed to match the monitor output.

**1** Select the [AUDIO SETTINGS] menu → [AUDIO OUTPUT] → [MONITOR DELAY] → [LIVE]/[RECORDING].

[LIVE]: Audio is not delayed.

[RECORDING]: Audio is delayed to match the monitor output.

## Direct volume control function

The audio level can be adjusted with the multial by assigning [MONITOR VOL] to the multial that is to be used as the USER button in advance.

- To use as the USER button, set the <WB>/<USER>/<ISO/dB> switch to <USER>.

■ Assigning [MONITOR VOL] to the multial

**1** Select the [SYSTEM SETTINGS] menu → [USER SWITCHES] → [USER TOGGLE] → [MONITOR VOL].

■ Using the direct volume control function

**1** Set the <WB>/<USER>/<ISO/dB> switch to <USER>.

**2 Operate the multidial to adjust the audio level.****Confirming audio input setting**

Setting of the audio input can be confirmed in the [AUDIO] screen.

**1 Press the <INFO> while the HOME screen is displayed.**

The INFO screen is displayed.

**2 Select [AUDIO].**

The [AUDIO] screen is displayed, and the settings of the [AUDIO SETTINGS] menu can be confirmed all at once.

## Chapter 6 **Playback**

---

Data including additional information such as image, audio, and meta data that are recorded by single shooting is saved as a clip. Playback, copy, etc., of the clip can be performed on the camera.

# Thumbnail operation

## Thumbnail operation overview

A clip is a group of data recorded by a single shooting, which includes additional information such as image, audio, and meta data.

The following operations can be performed while viewing the clip thumbnails displayed on the LCD monitor.

- Playback, delete, and copy of a clip (only possible for a clip recorded in AVCHD)

There is a method to operate with the multial or a grip multial, or a method to operate by touching the LCD monitor.

### NOTE

- The thumbnail screen is not displayed when the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

## Thumbnail screen

The thumbnail screen is displayed when the <THUMBNAIL> button is pressed while the VIEW screen or the HOME screen is displayed.

Pressing the <THUMBNAIL> button again displays the VIEW screen.

To return to the HOME screen, press the <HOME> button.

The clips in the recording codec (MOV or AVCHD) selected in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC] is displayed in the thumbnail screen.

Also, menu in the thumbnail screen can be operated by pressing the <MENU> button while the thumbnail screen is displayed.

### 1 Clip status display

**[ALL SLOT]:** Displays all the clips recorded on all the SD cards in each card slot. Displays in [ALL SLOT] when the thumbnail screen is displayed from the VIEW screen or the HOME screen.

**[SLOT1]:** Displays only the clips recorded on the SD card in card slot 1.

**[SLOT2]:** Displays only the clips recorded on the SD card in card slot 2.

**[SLOT1→SLOT2]:** Displays when copying from the SD card in the card slot 1 to the SD card in the card slot 2.

**[SLOT2→SLOT1]:** Displays when copying from the SD card in the card slot 2 to the SD card in the card slot 1.

### 2 Function display

This is displayed during the operation of copy, delete, protect, etc.

### 3 Recording mode

**MOV:** Displays when MOV is selected as the recording codec.

**AVCHD:** Displays when AVCHD is selected as the recording codec.

**AVCHD:** Displays when MOV is selected as recording codec, and if there is at least one AVCHD clip in any of the SD cards. This is not displayed if there is no AVCHD clip.

**MOV:** Displays when AVCHD is selected as recording codec, and if there is at least one MOV clip in any of the SD cards. This is not displayed if there is no MOV clip.

### 4 Media status display

The card slot number of the SD card where the clip in the cursor position is recorded is displayed in yellow.

### 5 Wireless LAN connection status display

Displays the connection status of the wireless LAN.

(No display): It is not connected to a wireless LAN. It is set to the [NETWORK SETTINGS] menu → [NETWORK SEL] → [OFF].

: A status where ROP is not connected.

: A status where ROP is connected.

### 6 Power status display

: Indicates the remaining battery level while powered with the battery.

: Displays when powered with the AC adaptor.

### 7 Cursor

### 8 Clip that cannot be played back

Displays when the clip cannot be played back in the camera such as standard violation.

**9 Page switching button**

Switches the page of the thumbnail screen.

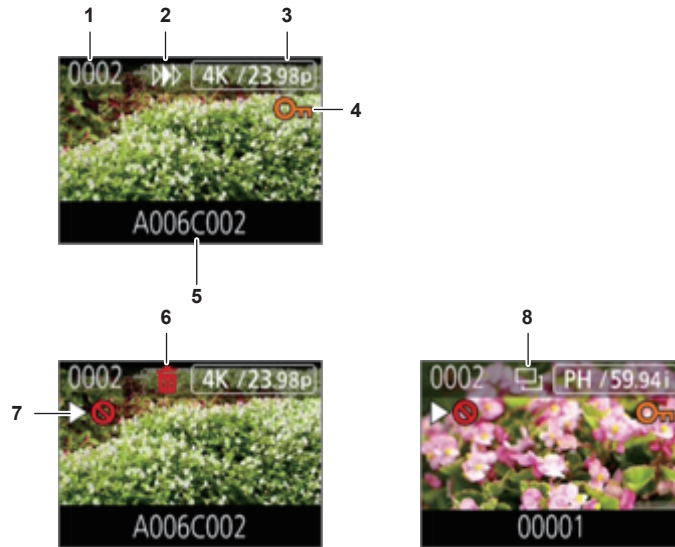

[△]: Moves to previous page

[▽]: Moves to next page

**10 Scroll bar**

Indicates which part of the whole thumbnail is currently being viewed.

**Display of the clips in the thumbnail screen**

**1 Thumbnail number**

Displays the thumbnail number in [0001] to [9999].

Normally, the number assigned to the clip in the order of recording is displayed.

**2 Resume play status**

**3 Number of recorded pixels, system frequency**

**4 Protection status of the clip**

This is displayed when the clip is protected.

**5 Clip name**

First eight digits of the file name of the clip is displayed in alphanumeric.

**6 Delete selection status**

**7 Clip that cannot be played back**

This is displayed when the clip cannot be played back with the camera because the system frequency is different, etc.

**8 Copy selection status**

This is displayed when the clip is selected.

**Display of clip information**

Displays the information of the clip where the cursor is positioned.

**1 Move the yellow cursor to the clip to display the clip information.**

**2 Press the <INFO> button.**

The clip information is displayed.

■ Clip information

- 1 Clip that cannot be played back**  
This is displayed when the clip cannot be played back with the camera because the system frequency is different, etc.
- 2 Thumbnail number**
- 3 Protection status of the clip**  
This is displayed when the clip is protected.
- 4 Thumbnail image**
- 5 Clip name**
- 6 [START TC]**  
Displays the time code value at the start of the recording.
- 7 [START UB]**  
Displays the user bits value at the start of the recording.
- 8 [DATE]**  
Displays the date of the recording.
- 9 [TIME]**  
Displays the time at the start of recording.
- 10 [DURATION]**  
Displays the time length of the clip.
- 11 [PIXEL/FREQ]**  
Displays the recording format of the clip.
- 12 [CODEC]**  
Displays the recording codec of the clip.

## Copying clips

Clip can be copied between the SD cards.  
Only the clip recorded in AVCHD can be copied.

Fig. 1

Fig. 2

Fig. 3

Fig. 4

Fig. 5

- 1 Press the <THUMBNAIL> button.**  
The thumbnail screen is displayed.
- 2 Press the <MENU> button while the thumbnail screen is displayed.**  
The menu is displayed.
- 3 Select the [THUMBNAIL] menu → [CLIP] → [COPY].**
- 4 Select [SELECT]. (Fig. 1)**
  - Selecting [ALL] will copy all the clips between the SD cards.
- 5 Select the card slot for the copy destination. (Fig. 2)**  
The clips in the SD card of the copy source is displayed in the thumbnail screen. (Fig. 3)
  - [SLOT1→SLOT2]: Clip can be copied from the SD card in the card slot 1 to the SD card in the card slot 2.
  - [SLOT2→SLOT1]: Clip can be copied from the SD card in the card slot 2 to the SD card in the card slot 1.
- 6 Select the clip to copy in the thumbnail screen.**  
☐ is displayed on the selected clip.
- 7 Select  (Fig. 4)**
  - This can also be selected by pressing and holding the multial.
- 8 When the confirmation message is displayed, select [SET].**  
Progress bar is displayed, and the copy of the clip starts.
  - To cancel the copy midway, select [CANCEL].
- 9 When the completion message is displayed, select  (Fig. 5)**

**NOTE**

- The clip with MOV as the recording codec cannot be copied.
- The copy is not possible when the volume of the selected clip is larger than the available card capacity of the destination.
- It cannot copy when the copy destination card is write protected.
- The copy is not possible when the maximum number of the clips will exceed.
- The copy is not possible when the maximum number of the playlist will exceed.

**Deleting clips**

Deletes the clip.

Fig. 1

Fig. 2

Fig. 3

- 1 Press the <THUMBNAIL> button.**  
The thumbnail screen is displayed.
- 2 Press the <MENU> button while the thumbnail screen is displayed.**  
The menu is displayed.
- 3 Select the [THUMBNAIL] menu → [CLIP] → [DELETE].**
- 4 Select [SELECT]. (Fig. 1)**  
The thumbnail screen is displayed. (Fig. 2)
  - When [ALL] is selected, all the clips displayed in the thumbnail screen are deleted.
  - The clip that is not displayed in the thumbnail screen is not deleted.
- 5 Select the clip to delete in the thumbnail screen.**  
A trash icon is displayed on the selected clip.
- 6 Select [DEL]. (Fig. 3)**
  - This can also be selected by pressing and holding the multidial.
- 7 When the confirmation message is displayed, select [SET].**  
Progress bar is displayed, and the deleting of the clip starts.
  - To cancel midway, select [CANCEL].
- 8 When the completion message is displayed, select [RETURN].**

**NOTE**

- The protected clip cannot be deleted.
- It cannot delete when the card with the clip to delete is write protected.

**Protecting clips**

A clip can be protected.

- 1 Press the <THUMBNAIL> button.**  
The thumbnail screen is displayed.

**2 Press the <MENU> button while the thumbnail screen is displayed.**

The menu is displayed.

**3 Select the [THUMBNAIL] menu → [CLIP] → [PROTECT].****4 Select [SELECT].**

The thumbnail screen is displayed.

**5 Select the clip to protect in the thumbnail screen.**

-  is displayed on the selected clip.
- Protect is cancelled when the protected clip is selected.

**NOTE**

- It cannot protect when the card with the clip to protect is write protected.

**Restoring clips**

In following cases, an error message may be displayed and it may need restoration of the clip depending on the condition. It may take some time to restore depending on the error.

- When the SD card in the slot is taken out while the card 1 access lamp or the card 2 access lamp is flashing
- When the power is turned off by removing the battery or the AC adaptor while recording or performing record completion process

Fig. 1

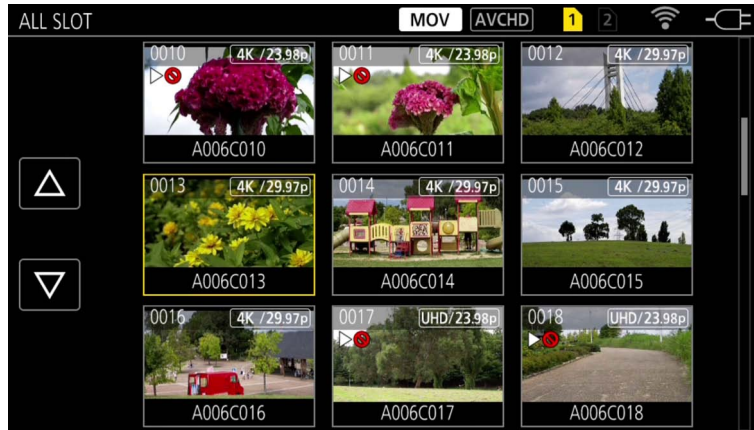

**1 Select [SET] in the error message screen. (Fig. 1)**

- Once the repair is completed, select  in the confirmation message. It will return to the previous screen.
-  is displayed on the clip when an abnormal management information is detected while displaying the thumbnail.

**NOTE**

- Do not remove the SD card in the slot with the card 1 access lamp/card 2 access lamp is flashing in orange or remove the battery or the AC adaptor when the lamp is flashing. Doing so will cause damage to the SD card.
- Use a sufficiently charged battery or AC adaptor.
- It may not be possible to completely repair depending on the condition of the data.
- To restore the clips, it is necessary that the clips are recorded for more than a certain amount of time. Especially in the following cases, the clips may not be restored, because the number of frames to be recorded is small.
  - When the variable frame rate recording function is enabled, and the frame rate lower than the system frequency is set.
  - When the interval recording function is enabled.
- The clips shot before the power was turned off will not be able playback if the repair fails. Also, it may not be possible to record any more.
- If data recorded with other device is repaired, it may not be able to play back on the camera or other device.
- If the repair failed, turn off the camera, and turn it back on after waiting for a while. If the repair fails repeatedly, format with the camera. All data will be erased when it is formatted, and it cannot be restored.
- Display of the thumbnail become slower when the thumbnail information is repaired.

Playing back clips

- 1** From the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]/[MAIN PIXEL], select the system frequency and the number of recording pixels to play back.
- 2** From the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC], select the codec (MOV or AVCHD) to play back.
- 3** Press the <THUMBNAIL> button.  
The thumbnail screen is displayed.
- 4** Press the <MENU> button while the thumbnail screen is displayed.  
The menu is displayed.
- 5** From the [THUMBNAIL] menu → [PLAYBACK] → [SLOT SEL], select the card slot of the SD card to play back.  
[ALL SLOT]: Displays the clips recorded on all the SD cards in each card slot. Displays in the order of the clips in card slot 1, and then clips in the card slot 2.  
[SLOT1]: Displays only the clips recorded on the SD card in card slot 1.  
[SLOT2]: Displays only the clips recorded on the SD card in card slot 2.
- 6** Select the clip to play back. (Fig. 1)
  - ▷⊘ is displayed on the clip that cannot be played back.
  - To play back the clip with ▷⊘ displayed, check the information of the clip with the clip information, and try operating from the beginning again.

Playback from the operation icon

Direct playback bar

Playback operation	Operating procedure
Playback/pause	Touch ►  .
Fast-reverse playback	Touch ◀◀. Speed will increase by touching twice.
Fast-forward playback	Touch ▶▶. Speed will increase by touching twice.
Stop (return to thumbnail screen)	Touch ■.
Skip playback (cue up of the clip)	Touch the LCD monitor while playing back, and slide from right to left (left to right).

Playback operation	Operating procedure
Slow playback	<p>Touch and hold <b>⏮</b> during pause.                      (⏮ is for reverse slow playback)                      It will perform slow playback with continuous frame-by-frame while touched.</p> <ul style="list-style-type: none"> <li>• It will return to normal speed playback by touching <b>⏭</b>.</li> <li>• The frame-by-frame interval and the display time for each frame for the reverse slow playback differ depending on the type of the clip.</li> </ul>
Frame-by-frame playback	<p>Touch <b>⏮</b> while paused.                      (⏮ is reverse frame-by-frame playback)</p> <ul style="list-style-type: none"> <li>• It will return to normal speed playback by touching <b>⏭</b>.</li> <li>• The frame-by-frame interval for reverse frame-by-frame playback differs depending on the type of the clip.</li> </ul>
Direct playback	<p>Touch the direct playback bar, or slide it while touching.</p> <ul style="list-style-type: none"> <li>• The playback video is paused during the operation. Playback is started by releasing the finger.</li> </ul>

 **NOTE**

- Operation of the camera or some of the operation may become slow for the clip with large file size.
- Operation of the camera or some of the operation may become slow when there are a large number of clips in the SD card.
- Playback will be paused when the [THUMBNAIL] menu → [PLAYBACK] → [SLOT SEL] → [ALL SLOT] is set and all clips in the SD cards are displayed. Playback is not possible across two SD cards.
- Playback will stop when the SD card is taken out while playing back.

## Useful playback function

---

### Resume play

When the playback of a clip is stopped midway, it will start the playback from the position that stopped the playback when it is played back the next time.

**1** Select the [THUMBNAIL] menu → [PLAYBACK] → [RESUME PLAY] → [ON].

[▶▶] is displayed on the clip in the thumbnail screen.

#### NOTE

- Resume playback is cancelled in following cases.
  - When the power is turned off
  - When the thumbnail screen is cancelled by pressing the <THUMBNAIL> button
  - When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] is changed

## Chapter 7 **Output and Screen Display**

---

This chapter describes the screen displayed on the output video and LCD monitor.

## Output format

The format to be output differs depending on the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]/[MAIN PIXEL].

### Format that can be output from the <SDI OUT> terminal

The format that can be output from the <SDI OUT> terminal differs with following combination of the settings.

- The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]
- The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL]
- The [OUTPUT SETTINGS] menu → [SDI OUT] → [SIGNAL SEL]
- The [OUTPUT SETTINGS] menu → [SDI OUT] → [OUT FORMAT]

Item			Output Format [OUT FORMAT]	
[FREQUENCY]	[MAIN PIXEL]	[SIGNAL SEL]		
[59.94p] [50.00p]	[4096x2160]	[SDI]	(No 4K output) 1920×1080p*1 1920×1080i*1 (Factory settings)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
	[3840x2160]	[SDI]	(No 4K output) 1920×1080p 1920×1080i(Factory settings)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
	[2048x1080]	[SDI]	1920×1080p*1 1920×1080i*1 (Factory setting)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
	[1920x1080]	[SDI]	1920×1080p 1920×1080i (Factory setting)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
	[1280x720]	[SDI]	1280×720p (Factory setting)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
[59.94i] [50.00i]	[1920x1080]	[SDI]	1920×1080i (Factory setting)	
		[LCD(1080p)]	1920×1080p*2	
		[LCD(1080i)]	1920×1080i*2	
[29.97p] [23.98p]	[4096x2160]	[SDI]	4096×2160p 1920×1080p*1 1920×1080PsF*1 (Factory setting)	
		[LCD(1080p)]	1920×1080 over 59.94p*2	
		[LCD(1080i)]	1920×1080 over 59.94i*2	
	[3840x2160]	[SDI]	3840×2160p 1920×1080p 1920×1080PsF (Factory setting)	
		[LCD(1080p)]	1920×1080 over 59.94p*2	
		[LCD(1080i)]	1920×1080 over 59.94i*2	
	[2048x1080]	[SDI]	1920×1080p*1 1920×1080PsF*1 (Factory setting)	
		[LCD(1080p)]	1920×1080 over 59.94p*2	
		[LCD(1080i)]	1920×1080 over 59.94i*2	
	[1920x1080]	[SDI]	1920×1080p 1920×1080PsF (Factory setting)	
		[LCD(1080p)]	1920×1080 over 59.94p*2	
		[LCD(1080i)]	1920×1080 over 59.94i*2	
	[24.00p]	[4096x2160]	[SDI]	4096×2160p 1920×1080p*1 1920×1080PsF*1 (Factory setting)
			[LCD(1080p)]	1920×1080 over 60p*2
			[LCD(1080i)]	1920×1080 over 60i*2
[2048x1080]		[SDI]	1920×1080p*1 1920×1080PsF*1 (Factory setting)	
		[LCD(1080p)]	1920×1080 over 60p*2	
		[LCD(1080i)]	1920×1080 over 60i*2	
[25.00p]	[4096x2160]	[SDI]	4096×2160p 1920×1080p*1 1920×1080PsF*1 (Factory setting)	

Item			Output Format [OUT FORMAT]
[FREQUENCY]	[MAIN PIXEL]	[SIGNAL SEL]	
		[LCD(1080p)]	1920×1080 over 50p*2
		[LCD(1080i)]	1920×1080 over 50i*2
	[3840x2160]	[SDI]	3840×2160p 1920×1080p 1920×1080PsF (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
		[LCD(1080i)]	1920×1080 over 50i*2
	[2048x1080]	[SDI]	1920×1080p*1 1920×1080PsF*1 (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
		[LCD(1080i)]	1920×1080 over 50i*2
	[1920x1080]	[SDI]	1920×1080p 1920×1080PsF (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
		[LCD(1080i)]	1920×1080 over 50i*2

\*1 Displayed in the letterbox format. Quality is slightly lower compared to recorded image.

\*2 It will be the same image as the LCD monitor with black band in all four sides. Focus and EI assist display are possible. Equivalent to 4:2:2 (8 bits).

**NOTE**

- The output will be as follows regardless of [FREQUENCY] or [MAIN PIXEL] setting when [SIGNAL SEL] is set to [LCD(1080p)] or [LCD(1080i)].
  - When [FREQUENCY] is set to [59.94p]/[59.94i]/[29.97p]/[23.98p]: 1920×1080 over 59.94p or 1920×1080 over 59.94i
  - When [FREQUENCY] is set to [50.00p]/[50.00i]/[25.00p]: 1920×1080 over 50p or 1920×1080 over 50i
  - When [FREQUENCY] is set to [24.00p]: 1920×1080 over 60p or 1920×1080 over 60i
- The 2048×1080 output is not supported.
- [OUT FORMAT] will change to the factory setting when settings of [FREQUENCY] and [MAIN PIXEL] change and current settings in [OUT FORMAT] cannot be acquired.
- The output format when playing back from the thumbnail screen is as follows.
  - It will be the value set in [OUT FORMAT] when the recording resolution of the playback clip is the same as [MAIN PIXEL].
  - It will be factory setting of [OUT FORMAT] when the recording resolution of the playback clip is different from [MAIN PIXEL].
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], it will be RAW output.

**Format that can be output from the <HDMI> terminal**

The format that can be output from the <HDMI> terminal differs with following combination of the settings.

- The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY]
- The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL]
- The [OUTPUT SETTINGS] menu → [HDMI OUT] → [SIGNAL SEL]
- The [OUTPUT SETTINGS] menu → [HDMI OUT] → [OUT FORMAT]

Item			Output Format [OUT FORMAT]
[FREQUENCY]	[MAIN PIXEL]	[SIGNAL SEL]	
[59.94p] [50.00p]	[4096x2160]	[HDMI]	4096×2160p 4096×2160p (4:2:0/8 bits) 1920×1080p*1 (Factory setting) 1920×1080i*1
		[LCD(1080p)]	1920×1080p*2
	[3840x2160]	[HDMI]	3840×2160p 3840×2160p (4:2:0/8 bits) 1920×1080p (Factory setting) 1920×1080i
		[LCD(1080p)]	1920×1080p*2
	[2048x1080]	[HDMI]	1920×1080p*1 (Factory setting) 1920×1080i*1
		[LCD(1080p)]	1920×1080p*2
	[1920x1080]	[HDMI]	1920×1080p (Factory setting) 1920×1080i

	[1920x1080]	[HDMI]	1920×1080p (Factory setting)
		[LCD(1080p)]	1920×1080 over 59.94p*2
[24.00p]	[4096x2160]	[HDMI]	4096×2160p 1920×1080p*1 (Factory setting)
		[LCD(1080p)]	1920×1080 over 60p*2
	[2048x1080]	[HDMI]	1920×1080p*1 (Factory setting)
		[LCD(1080p)]	1920×1080 over 60p*2
[25.00p]	[4096x2160]	[HDMI]	4096×2160p 1920×1080p*1 (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
	[3840x2160]	[HDMI]	3840×2160p 1920×1080p (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
	[2048x1080]	[HDMI]	1920×1080p*1 (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2
	[1920x1080]	[HDMI]	1920×1080p (Factory setting)
		[LCD(1080p)]	1920×1080 over 50p*2

\*1 Displayed in the letterbox format. Quality is slightly lower compared to recorded image.

\*2 It will be the same image as the LCD monitor with black band in all four sides. Focus and EI assist display are possible. Equivalent to 4:2:2 (8 bits). The time code information is not output.

Following functions are not displayed.

Focus square display

Waveform monitor

Zebra pattern when the skin tone detail function is set to enable

#### NOTE

- The output will be as follows regardless of [FREQUENCY] or [MAIN PIXEL] when [SIGNAL SEL] is set to [LCD(1080p)].
  - When [FREQUENCY] is set to [59.94p]/[59.94i]/[29.97p]/[23.98p]: 1920×1080 over 59.94p
  - When [FREQUENCY] is set to [50.00p]/[50.00i]/[25.00p]: 1920×1080 over 50p
  - When [FREQUENCY] is set to [24.00p]: 1920×1080 over 60p
- The 2048×1080 output is not supported.
- [OUT FORMAT] will change to the factory setting when the settings of [FREQUENCY] and [MAIN PIXEL] change and current settings in [OUT FORMAT] cannot be acquired.
- The output format when playing back from the thumbnail screen is as follows.
  - It will be the value set in [OUT FORMAT] when the recording resolution of the playback clip is the same as [MAIN PIXEL].
  - It will be factory setting of [OUT FORMAT] when the recording resolution of the playback clip is different from [MAIN PIXEL].
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], and the [OUTPUT SETTINGS] menu → [HDMI OUT] → [SIGNAL SEL] is set to [HDMI], [OUT FORMAT] is fixed to [1920x1080p].
- When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the time code information is not output.

## Screen status display

### ■ During shooting

#### 1 Clip name

Displays the clip name being recorded with maximum of eight characters from beginning.

#### 2 System resolution/RAW output resolution

Displays the resolution set in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN PIXEL]/[SENSOR MODE].

- [4096x2160]
- [3840x2160]
- [2048x1080]
- [1920x1080]
- [1280x720]
- [2048 MIX], [1920 MIX]: When [SENSOR MODE] is set to [S35 MIX 2.8K]
- [2048 CROP], [1920 CROP]: When [SENSOR MODE] is set to [4/3 CROP&MIX 2.2K]

When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], the RAW output resolution set in [SDI RAW] is displayed.

- [S35 5.7K]
- [CROP 4K]
- [CROP&MIX 2K]

#### 3 System frequency

Displays the frequency set in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY].

- [23.98p]
- [24.00p]
- [25.00p]
- [29.97p]
- [50.00p]
- [50.00i]
- [59.94p]
- [59.94i]

#### 4 Color of the main recording

Displays the color setting set in the [SYSTEM SETTINGS] menu → [COLOR SETTINGS] → [MAIN].

- [VLog]: V-Log
- [SCN1]: SCENE1
- [SCN2]: SCENE2
- [SCN3]: SCENE3
- [SCN4]: SCENE4
- [SCN5]: SCENE5

#### 5 Recording format

Displays the format set in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [MAIN CODEC]/[SDI RAW].

- [MOV 420L]
- [MOV 422L]
- [MOV 422I]
- [AVCHD PS]
- [AVCHD PH]
- [AVCHD HA]
- [AVCHD PM]
- [SDI RAW]: When [SDI RAW] is set to anything other than [OFF].

**6 Recording status (card slot 1)**

Displays the recording status of the SD card in the card slot 1.

- **1** : Not target for recording.
- **1 (flashing)**: Recognizing the SD card.
- **1** : The recording is stopped with the recording target SD card is inserted.
- **1 (flashing)**: Recognizing the SD card.
- **1** : Recording.
- **1 (Flashing red dot)**: Processing to stop the recording.
- **[P 1]**: Recording is stopped with the pre-recording is enabled and the recording target SD card is inserted.
- **[P]**: Pre-recording is enabled, and the SD card is not inserted in the card slot, or the SD card is not recognized.
- **(No display)**: It is in one of the following conditions.
  - The SD card is not inserted.
  - The SD card cannot be recognized.
  - The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], and recording is stopped.
- **●**: The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], and recording is in progress.

**7 Remaining recordable capacity and status of the SD card (card slot 1)**

Displays the remaining recordable capacity of the SD card and status of the SD card in the card slot 1.

- **[0min] to [999min]**: Remaining recordable capacity (999 minutes or more is displayed as [999min])
  - The display will flash when the remaining recordable capacity becomes two minutes or less.
  - During the simultaneous recording, the remaining recordable capacity to be able to perform simultaneous recording (the one with smaller remaining recordable capacity of the two SD cards) is displayed.
- **[WP]**: Write protected (the write protection switch on the SD card is at the LOCK side)
- **[END]**: No remaining recordable capacity (there is no remaining recordable capacity in the SD card)
- **[ERR]**: The SD card that cannot be recorded is inserted (it is recognized, but cannot be used such as format error, other than SD card, etc.)
- **[!SDXC]**: The SDXC memory card is not inserted for MOV recording
- **(No display)**: It is in one of the following conditions.
  - The SD card is not inserted.
  - The SD card cannot be recognized.
  - The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**8 Recording status (card slot 2)**

Displays the recording status of the SD card in the card slot 2.

- **2** : Not target for recording.
- **2 (flashing)**: Recognizing the SD card.
- **2** : The recording is stopped with the recording target SD card is inserted.
- **2 (flashing)**: Recognizing the SD card.
- **2** : Recording.
- **2 (Flashing red dot)**: Processing to stop the recording.
- **[P 2]**: Recording is stopped with the pre-recording is enabled and the recording target SD card is inserted.
- **[P]**: Pre-recording is enabled, and the SD card is not inserted in the card slot, or the SD card is not recognized.
- **(No display)**: It is in one of the following conditions.
  - The SD card is not inserted.
  - The SD card cannot be recognized.
  - The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**9 Remaining recordable capacity and status of the SD card (card slot 2)**

Displays the remaining recordable capacity of the SD card and status of the SD card in the card slot 2.

- **[0min] to [999min]**: Remaining recordable capacity (999 minutes or more is displayed as [999min])
  - The display will flash when the remaining recordable capacity becomes two minutes or less.
  - During the simultaneous recording, the remaining recordable capacity to be able to perform simultaneous recording (the one with smaller remaining recordable capacity of the two SD cards) is displayed.
- **[WP]**: Write protected (the write protection switch on the SD card is at the LOCK side)
- **[END]**: No remaining recordable capacity (there is no remaining recordable capacity in the SD card)
- **[ERR]**: The SD card that cannot be recorded is inserted (it is recognized, but cannot be used such as format error, other than SD card, etc.)
- **[!SDXC]**: The SDXC memory card is not inserted for MOV recording
- **(No display)**: It is in one of the following conditions.
  - The SD card is not inserted.
  - The SD card cannot be recognized.
  - The [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF].

**10 Two-slot function**

Displays the setting status of the recording function using two SD cards.

It is displayed with a slanted line if it is in a condition that cannot perform two-slot recording even if each function is enabled.

- **[RELAY]**: When relay recording is enabled
- **[SIMUL]**: When simultaneous recording is enabled
- **(No display)**: When it is standard recording

#### 11 Time code

Displays the time code, user bits, and duration in accordance with the [REC SETTINGS] menu → [TC] → [TC/UB/Dur.] setting.

- [TC \*\*:\*\*:\*\*:\*\*]: Displays the time code. (Displayed black and white inverted when slave locked to the externally input time code)
- [UB \*\* \*\* \*\* \*\*]: Displays the user bits.
- [Dur \*\*:\*\*:\*\*:\*\*]: Displays the duration.

#### 12 Power supply status

: Indicates the remaining battery level while powered with the battery. (The battery status display will change as  →  →  →  →  while the remaining battery level gets lower. It will flash in red when the remaining battery level is zero)

: Displays when powered with the AC adaptor.

#### 13 Audio level meter

Displays the volume.

Displays the reference level position set in the [AUDIO SETTINGS] menu → [AUDIO CH SETTINGS] → [HEAD ROOM] → [18dB]/[20dB] is blacked out. (Eighth from left when set to [20dB], ninth from left when set to [18dB])

- [A-REC]: Displays when audio cannot be recorded. (Such as when the variable frame rate recording function is enabled, and the frame rate is set different from the system frequency.)

#### 14 Frame rate

Displays the frame rate.

Displays two places of decimals only when the frame rate is the same as the system frequency setting.

This is not displayed when the system frequency is 60i/50i.

#### 15 Shutter speed

Displays the shutter speed.

Display of [sec] and [deg] can be switched with the [CAMERA SETTINGS] menu → [SHUTTER] → [MODE]. Displays in time (minutes) display when set to [sec], and in aperture angle when set to [deg].

Does not display when the shutter is disabled.

#### 16 EXPOSURE INDEX

Displays the sensitivity of the video. Display of [ISO] and [dB] can be switched with the [CAMERA SETTINGS] menu → [EI] → [MODE].

#### 17 Spot meter

Displays the brightness of the center in either [STOP] or [%] unit.

When [V-Log] is selected, [STOP] and [%] can be switched with the [OUTPUT SETTINGS] menu → [LCD EI ASSIST] → [SPOT METER UNIT].

When anything other than [V-Log] is selected, the display is fixed as [%].

#### 18 Color temperature

Displays the selected color temperature.

- [A\*\*\*\*K+\*. \*]: Displays the value of the color temperature and the setting value of GMg. [A] is displayed in case of preset list acquired by the auto white balance.
- [ATW]: Displays when the auto tracking white balance is operating.
- [ATW LOCK]: Displays when the auto tracking white balance is locked.

#### 19 Iris

Displays the F value. ([A] is displayed when auto iris is operating)

This is not displayed in the following cases.

- When the lens is not connected
- When the data cannot be acquired

#### 20 Zoom

Displays the zoom distance in millimeter unit.

This is not displayed in the following cases.

- When the lens is not connected
- When the data cannot be acquired

#### 21 ND filter

Displays the selected ND filter.

- [ND:1.8]: Reduces the amount of light entering the MOS sensor to 1/64.
- [ND:1.2]: Reduces the amount of light entering the MOS sensor to 1/16.
- [ND:0.6]: Reduces the amount of light entering the MOS sensor to 1/4.
- [ND:CLR]: The ND filter is not used.

#### 22 Electronic image stabilization function/digital zoom

Displays when the electronic image stabilization function is set or the digital zoom is enabled.

- [EIS]: Displays when the electronic image stabilization function is enabled.
- [D1.4x]: Displays when the 1.4x digital zoom is enabled.

#### 23 Special recording function

Displays the status of special recording function.

- [INTRVL]: The interval recording is stopped.
- [I-REC]: The interval recording is in progress. (Displayed in red)

#### 24 Message display area

Displays the message such as the camera status or the warning.

#### 25 Level gauge

Tilt in horizontal direction or vertical direction can be checked.

Displays only on the LCD monitor.

#### 26 Wireless LAN connection status

Displays the connection status of the wireless LAN.

**27 External equipment recording operation control status (<SDI OUT>/<HDMI> terminal)**

Displays the control status of the recording start and recording stop on the external equipment connected to the <SDI OUT> terminal and the <HDMI> terminal.

- **[S/H●]**: Recording instruction is output to the output from the <SDI OUT> terminal, <HDMI> terminal.
- **[S/H]**: Pause instruction is output to the output from the <SDI OUT> terminal, <HDMI> terminal.
- **[SDI●]**: Recording instruction is output to the output from the <SDI OUT> terminal.
- **[SDI]**: Pause instruction is output to the output from the <SDI OUT> terminal.
- **[HDMI●]**: Recording instruction is output to the output from the <HDMI> terminal.
- **[HDMI]**: Pause instruction is output to the output from the <HDMI> terminal.

**28 Waveform monitor**

Displays the video status in waveform or vector.  
Displays only on the LCD monitor.

**29 IR shooting**

Displays when the IR recording is set to enable.

■ **During playback**

**1 Playback status**

Displays the status of playback.  
Displays only during playback.

- ■: Stop
- ►: Playback
- ■■: Pause
- ◀◀: Frame-by-frame rewind
- ▶▶: Frame-by-frame
- ▶▶▶: Fast-forward playback (10x speed)
- ▶▶▶▶: Fast-forward playback (20x speed)
- ◀◀◀: Fast-reverse playback (10x speed)
- ◀◀◀◀: Fast-reverse playback (20x speed)
- ▶: Slow playback
- ◀: Reverse slow playback

**2 Direct playback bar**

Displays the general position that is being played back.

**3 Playback navigation button**

Operates by touching the button.

- ▶▶▶: Fast-forward playback
- ◀◀◀: Fast-reverse playback
- ■: Stop
- ▶/■: Playback/pause

## Chapter 8 **Connecting to External Devices**

---

This chapter describes the external devices that can be connected to the camera.

## Connecting with headphones and TV/monitor

### Headphones

Headphones (optional) can be connected to the headphone terminal (3.5 mm stereo mini jack).

#### NOTE

- Audio is not output from the built-in speaker when headphones are connected to the headphone terminal.

### TV/monitor

A TV or monitor can be connected as shown in the following figure.

#### NOTE

- VIERA Link is not supported on the camera. Note that the VIERA Link of other device may not properly operate when connected to the VIERA Link compatible device with a HDMI cable (optional).
- The SD resolution signal output from the <HDMI> terminal is output as a progressive signal (480P, 576P).
- For the BNC cable (optional) connected to the <SDI OUT> terminal, prepare a double-shielded cable equivalent to 5C-FB.
- Use the double shielded cable supporting 4K/60P as the HDMI cable (optional). Also, it is recommended to use the Panasonic HDMI cable compatible to 4K/60P as the HDMI cable.

## Remote operation by iPad or Android terminal

The camera can be connected to the wireless LAN by connecting a wireless module (optional) compatible to the camera to the <USB2.0 HOST> terminal of camera.

Some of the functions can be remotely operated by connecting the camera with an iPad or an Android terminal with EVA ROP app installed.

Following remote operation is possible using the EVA ROP app.

- Confirming the status of the camera
- Remote controlling of the camera

 **NOTE**

- For details of operation of EVA ROP app, refer to the support desk at the following website:  
<https://pro-av.panasonic.net/>

## Preparing to connect the iPad or Android terminal

### Mounting the wireless module

Mount the wireless module (optional) to the camera.

Before mounting or removing the wireless module, always turn the power switch to <⏻> (standby), and confirm that the power lamp is off.

**1** Open the terminal cover for the <USB2.0 HOST> at the rear.

**2** Connect the wireless module to the <USB2.0 HOST> terminal.

Insert it all the way.

- For details on the wireless module supporting the camera, visit the support desk at the following website.

<https://pro-av.panasonic.net/>

### Cautions when using wireless module AJ-WM50

Read the operating manual of the wireless module thoroughly and understand it before using.

For the latest information, visit the support desk at the following website.

<https://pro-av.panasonic.net/>

### Preparing the EVA ROP app

Install the EVA ROP app into the iPad or Android terminal.

#### ■ For iPad

- Download the EVA ROP app from App Store.

#### ■ For Android terminal

- Download the EVA ROP app from Google Play Store.

#### NOTE

- For details such as OS that supports EVA ROP app, refer to the support desk at the following website:  
<https://pro-av.panasonic.net/>

### Operation while the EVA ROP app is connected

#### ■ Operation of the camera that is connected

Following buttons and dial cannot be used.

- <MENU> button
- <THUMBNAIL> button

#### ■ Recording and playback operation while connected

- Recording can be operated by either the camera or the EVA ROP app.
- Playback operation is not possible.

#### NOTE

- The content set with the remote operation using the EVA ROP app is reflected to the camera.

## Camera settings

Following information of the camera is necessary to connect the iPad or the Android terminal to the camera.

- User account name  
Refer to “Setting the user account name and the password”.
  - Password  
Refer to “Setting the user account name and the password”.
  - IP address  
Refer to “Connecting the camera and the iPad/Android terminal”.
- It is not necessary to set the IP address when the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [DHCP] → [SERVER] is selected.  
(Factory setting: [SERVER])

### Setting the user account name and the password

**1** Select the [NETWORK SETTINGS] menu → [NETWORK FUNC] → [USER ACCOUNT] → [ADD].

**2** Enter the user account name and select [Enter].

- Enter the user account name with 31 characters or less.

**3** Enter the password and select [Enter].

- Enter the password between 6 characters and 15 characters.

#### ■ To enter a character

Operation is the same as entering with a keyboard.

Icon	Description of operation
[A-a]	Switches between upper case and lower case.
[Return]	Returns to the previous screen. Entered character is not reflected.
123 #+=	Switches the character to symbol/number.
␣	Enters space (blank).
[BS]	Deletes the character. Previous character is deleted when the cursor position is empty.
	Moves the cursor to right or left.
[Enter]	Completes the character entry.

### Deleting the user account

**1** Select the [NETWORK SETTINGS] menu → [NETWORK FUNC] → [USER ACCOUNT] → [DELETE].

The list of registered user account is displayed.

**2** Select the user account to delete.

A confirmation message appears.

**3** To delete, select [SET].

Returns to the registered user account list screen.

- To not to delete, select .

**4** To continue to delete, perform Steps 2 to 3.

- To exit from the operation, select the [EXIT] button.

## Connecting the camera and the iPad/Android terminal

This is the setting to connect with the iPad or the Android terminal directly or to connect to the wireless access point via wireless LAN.

### Direct connection ([DIRECT])

This is the setting to connect the camera to the iPad/Android terminal directly.

The camera may restart if necessary when the setting is changed.

- 1** Select the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [TYPE] → [DIRECT].
- 2** From the [NETWORK SETTINGS] menu → [NETWORK PROPERTY], set each item as necessary.
  - For details of setting, refer to “Setting items in [NETWORK PROPERTY] when set to [DIRECT]”.
- 3** Select the [NETWORK SETTINGS] menu → [NETWORK SEL] → [WLAN].
- 4** Select the SSID of the camera from the SSID list in the iPad/Android terminal, and enter the password (encryption key).
 

Display the wireless access point list screen in wireless LAN setting, and select SSID of the camera.

  - Factory setting: [AU-EVA1]

When the password confirmation screen appears, enter the password (encryption key).

  - Factory setting: [01234567890123456789abcdef]
- 5** Check the network connection.
 

Once connected,  is displayed on the screen of the camera.

#### ■ Setting items in [NETWORK PROPERTY] when set to [DIRECT]

[SSID]	Network name of the camera (SSID) (Factory setting: [AU-EVA1])
[BAND]	Setting to switch between two communication method ([2.4GHz] or [5GHz]) (Factory setting: [2.4GHz])
[CHANNEL(2.4GHz)]	Channel to be used when [BAND] is set to [2.4GHz] (Factory setting: [AUTO])
[CHANNEL(5GHz)]	Channel to be used when [BAND] is set to [5GHz] (Factory setting: [AUTO])
[ENCRYPT KEY]	WPA2 encryption key (Factory setting: [01234567890123456789abcdef])
[DHCP]	Setting the DHCP function <ul style="list-style-type: none"> <li>• [OFF]: Does not use the DHCP function.</li> <li>• [CLIENT]: When connecting by setting [TYPE] to [INFRA(SELECT)] or [INFRA(MANUAL)], it is acquired automatically from the DHCP. (Cannot be selected.)</li> <li>• [SERVER]: Enables the DHCP server function of the camera when connecting with [TYPE] set to [DIRECT]. (Factory setting: [SERVER])</li> </ul>
[IP ADDRESS]	IP address of the camera (Factory setting: [192.168.0.1])
[SUBNET MASK]	Subnet mask (Factory setting: [255.255.255.0])
[DEFAULT GATEWAY]	Default gateway (Factory setting: [192.168.0.254])

#### NOTE

- [DHCP] will be set to [SERVER].
- [ENCRYPTION] will be fixed to [WPA2-AES].
- Depending on the used wireless module, some of the items in [BAND], [CHANNEL(2.4GHz)], and [CHANNEL(5GHz)] may not be able to select.

### Connecting to the wireless access point ([INFRA(SELECT)]/[INFRA(MANUAL)])

This is the setting to connect the camera to a wireless access point.

#### When connecting by searching the wireless access point (SSID)

- 1** Select the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [TYPE] → [INFRA(SELECT)].
- 2** From the [NETWORK SETTINGS] menu → [NETWORK PROPERTY], set each item as necessary.
  - For details of setting, refer to “Setting items in [NETWORK PROPERTY] when set to [INFRA(SELECT)]”.
- 3** Select the [NETWORK SETTINGS] menu → [NETWORK SEL] → [WLAN].
- 4** Select the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [SSID].
  - Displays SSID of the searched wireless access point.
- 5** Select SSID, and select [Enter].
 

Setting is completed when the [ENCRYPT KEY] (encryption key, password) is not set.

**6** If the [ENCRYPT KEY] is set, enter the password, and select [Enter].

**7** Check the network connection.

Once connected,  is displayed on the screen of the camera.

 **NOTE**

• ENCRYPTION in WEP is not supported.

■ Setting items in [NETWORK PROPERTY] when set to [INFRA(SELECT)]

[ENCRYPTION]	[WPA-TKIP], [WPA-AES], [WPA2-TKIP], [WPA2-AES], [NONE] (Factory setting: [WPA-AES])
[ENCRYPT KEY]	WPA2 encryption key (Factory setting: [01234567890123456789abcdef])
[DHCP]	Setting the DHCP function <ul style="list-style-type: none"> <li>• [OFF]: Does not use the DHCP function.</li> <li>• [CLIENT]: Acquire from DHCP when connecting with [TYPE] set to [INFRA(SELECT)] or [INFRA(MANUAL)].</li> <li>• [SERVER]: When connecting by setting [TYPE] to [DIRECT], enable the DHCP server function of the camera. (Cannot be selected.)</li> </ul> (Factory setting: [SERVER])
[IP ADDRESS]	IP address of the camera (Factory setting: [192.168.0.1])
[SUBNET MASK]	Subnet mask (Factory setting: [255.255.255.0])

**When entering the wireless access point (SSID) manually**

**1** Select the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [TYPE] → [INFRA(MANUAL)].

**2** Set each item in the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] as necessary.

• For details of setting, refer to “Setting items in [NETWORK PROPERTY] when set to [INFRA(MANUAL)]”.

**3** Select the [NETWORK SETTINGS] menu → [NETWORK SEL] → [WLAN].

**4** From the [NETWORK SETTINGS] menu → [NETWORK PROPERTY] → [SSID], enter the SSID of the wireless access point to connect.

**5** Select SSID, and select [Enter].

Setting is completed when the [ENCRYPT KEY] (encryption key, password) is not set.

**6** If the [ENCRYPT KEY] is set, enter the password, and select [Enter].

**7** Check the network connection.

Once connected,  is displayed on the screen of the camera.

 **NOTE**

• ENCRYPTION in WEP is not supported.

■ Setting items in [NETWORK PROPERTY] when set to [INFRA(MANUAL)]

[ENCRYPTION]	[WPA-TKIP], [WPA-AES], [WPA2-TKIP], [WPA2-AES], [NONE] (Factory setting: [WPA-AES])
[ENCRYPT KEY]	WPA2 encryption key (Factory setting: [01234567890123456789abcdef])
[DHCP]	Setting the DHCP function <ul style="list-style-type: none"> <li>• [OFF]: Does not use the DHCP function.</li> <li>• [CLIENT]: Acquire from DHCP when connecting with [TYPE] set to [INFRA(SELECT)] or [INFRA(MANUAL)].</li> <li>• [SERVER]: When connecting by setting [TYPE] to [DIRECT], enable the DHCP server function of the camera. (Cannot be selected.)</li> </ul> (Factory setting: [SERVER])
[IP ADDRESS]	IP address of the camera (Factory setting: [192.168.0.1])
[SUBNET MASK]	Subnet mask (Factory setting: [255.255.255.0])

**When connecting from the history**

History of connection is saved when connected to a wireless access point. Connection is easily made with the same setting as before when connecting from the history.

**1** Select the [NETWORK SETTINGS] menu → [CONNECTION HISTORY] → [SELECT].

The connection history is listed with the SSID of the wireless access point.

**2** Select the SSID to connect.

**3** Check the network connection.

Once connected,  is displayed on the screen of the camera.

#### When deleting the history

**1** Select the [NETWORK SETTINGS] menu → [CONNECTION HISTORY] → [DELETE].

The connection history is listed with the SSID of the wireless access point.

**2** Select the SSID to delete.

A confirmation message appears.

**3** Select [SET].

Returns to Step 2.

- To not to delete, select .

**4** To continue to delete, perform Steps 2 to 3.

To exit from the operation, select the [EXIT] button.

#### NOTE

- Maximum of 20 histories that were recently used can be saved.

## Chapter 9 **Notes**

---

Maintenance of the camera or frequently asked questions are described.

## Frequently asked questions

### Power supply

#### ■ What is the power supply voltage supported by the supplied AC adaptor?

- AC 100 V-240 V

#### ■ Can the supplied AC adaptor used while the battery is mounted?

- It can be used. Supplying of the power is automatically switched to the AC adaptor side when the power is set to <|> (ON) and the AC adaptor is connected while the battery is mounted.

The power status display in the LCD monitor will change from the  mark to the .

#### ■ The camera cannot be operated even when the power is set to <|> (ON).

- Remove the power supply (the battery or the AC adaptor), and connect it again after approximately one minute.
- The operation of the corresponding button or the switch is disabled when the <LOCK> switch on the camera is set to <🔒>. Unlock if necessary.

### Battery

#### ■ The battery gets exhausted quickly, so is there any way to improve?

- Charge the battery sufficiently.
- The operating time becomes shorter in low temperature.
- If the time is short after sufficient charging, the battery life has expired.

#### ■ Can the battery that was used in the previous models used?

- VW-VBD58 (optional) can be used.

It is recommended to use the following Panasonic genuine batteries.

- AG-VBR59 (supplied/optional, 7.28 V, 5900 mAh)
- AG-VBR89 (optional, 7.28 V, 8850 mAh)
- AG-VBR118 (optional, 7.28 V, 11800 mAh)

#### ■ Can the supplied battery be charged with the battery charger AG-B23 (DE-A88) (optional)?

- It can perform normal charging. It cannot perform quick charging.

### Battery charger

#### ■ Can the previous battery charged with the supplied charger?

- It can perform normal charging.
- To perform quick charging, use the quick charging compatible battery. The camera is compatible to following quick charging compatible batteries.
  - AG-VBR59 (supplied/optional, 7.28 V, 5900 mAh)
  - AG-VBR89 (optional, 7.28 V, 8850 mAh)
  - AG-VBR118 (optional, 7.28 V, 11800 mAh)

### SD card

#### ■ Operation is not accepted even when an SD card is inserted into the card slot.

- The SD card to be used on the camera should always be formatted on the camera.  
The SD card formatted in a PC cannot be used in the camera.

### Shooting

#### ■ The shooting stops by itself, and cannot shoot.

- When the recording format is set to MOV format, use the SDXC memory card. MOV format data cannot be recorded on the SDHC memory card.
- Use the SD card with required Speed Class in accordance with the recording bit rate. (page 44)

#### ■ Audio cannot be recorded.

- Audio cannot be recorded in the following cases.
  - When the variable frame rate recording function is enabled, and the frame rate is set different from the system frequency
  - When the interval recording function is enabled
- When audio cannot be recorded,  is displayed in the HOME screen, and  is displayed in the VIEW screen.

### Editing

#### ■ Can the camera be connected to a computer (Windows/Mac) via USB?

- The camera does not have an USB device terminal, so the camera cannot be connected to a PC via USB. Connect the commercially available SD card reader to a PC, and copy the contents (data) directly from the SD card.

## Playback

### ■ The clip cannot be played back.

- The clip displaying  in the thumbnail screen cannot be played back.  is displayed on following clips.
  - A clip shot with other device, a clip edited by an editing software
  - Corrupted clip
-  is displayed on the clip in the thumbnail mode when the clip has different recording mode (MOV format/AVCHD format), or different system frequency. Change the system frequency or the recording codec.

### ■ The clip cannot be erased.

- Cancel the protect on the clip.
- The clip displaying  in the thumbnail screen may not be able to erase. Format the SD card if the clip is unwanted. All the data recorded on the SD will be erased when formatted. Save the necessary data into a PC, etc.

### ■ Can the contents shot with AG-DVX200 or AG-UX180 be played back?

- The contents recorded in MOV format/MP4 format cannot be played back. The camera has changed the folder structure of the SD card to maintain the compatibility of the file name with the Panasonic VARICAM series (AU-V35LT1G etc.).
- The contents recorded in AVCHD format can be played back. Contents recorded in the format that cannot be recorded with the camera cannot be played back.

## Others

### ■ Can the wired remote control used with AG-DVX200 series be used?

- The controlling format is different, so it cannot be used.

## Warning system

When an error is detected right after the camera is turned on or during the operation, occurrence of error is notified in the HOME screen, VIEW screen, or by the tally lamp. Deal with the error by following the indications.

### Cases indicated by error messages

#### System error

Screen display		Description	Behavior and cause
VIEW screen	HOME screen		
[SYSTEM ERROR]	—	An error in the standard signal or communication error has occurred.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. <ul style="list-style-type: none"> <li>Set the power to &lt;  &gt; (standby).</li> </ul>

#### Warning

Screen display		Description	Behavior and cause
VIEW screen	HOME screen		
[LOW BATTERY]	—	Remaining battery capacity is insufficient.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. The power status display becomes  , and it will flash once every second in red. <ul style="list-style-type: none"> <li>The power is turned off in approximately five seconds.</li> <li>Replace with a fully charged battery, or connect the AC adaptor.</li> </ul>
[HIGH TEMPERATURE]	—	Displayed when the internal temperature of the camera has risen above assumed.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. <ul style="list-style-type: none"> <li>The power is turned off in approximately five seconds.</li> <li>Turn on the power again and check recording and playback operations. If the problem persists, consult the dealer.</li> </ul>
[REC WARNING]		An error of the recording data has occurred during recording, and the recording has stopped.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. <ul style="list-style-type: none"> <li>Recording is stopped.</li> </ul>
[REC WARNING]		It has tried to record exceeding the maximum number of clips during recording.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. <ul style="list-style-type: none"> <li>Recording is stopped.</li> <li>When [DIAGNOSTICS] is selected in the INFO screen, [REC WARNING] [&lt;OVER MAX NUM. OF CLIPS&gt;] is displayed in the warning display area.</li> <li>Replace the SD card or delete unnecessary clips.</li> </ul>
[CARD ERROR <SLOT 1>] [CARD ERROR <SLOT 2>]		A data error caused by the SD card has occurred during recording or playback.	<ul style="list-style-type: none"> <li>When it was recording All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. Recording is stopped. After the recording is stopped, the SD card where the error has occurred is write protected. Replace the SD card in the card slot where the error occurred.</li> <li>When it was playing back Playback is stopped.</li> </ul>
[END] (SD card status display)	—	The remaining recordable capacity of the SD card has exhausted during recording.	All the tally lamps and the card access lamps (orange) will flash four times a second, and an alarm is sounded. <ul style="list-style-type: none"> <li>Recording is stopped.</li> <li>Replace the SD card or delete unnecessary clips.</li> </ul>
 (Once every second, flash in red)	—	Battery is almost consumed.	All the tally lamps will flash once every second. <ul style="list-style-type: none"> <li>The current operation will continue.</li> <li>Replace with a fully charged battery, or connect the AC adaptor.</li> </ul>
SD card remaining recordable capacity display (Flashes once every second during recording)	—	The remaining recordable capacity of the SD is getting low.	<ul style="list-style-type: none"> <li>Recording will continue.</li> <li>Replace the SD card as necessary.</li> </ul>

Alert

Screen display		Description	Behavior and cause
VIEW screen	HOME screen		
[SIMUL REC WARNING <SLOT 1>]/[SIMUL REC WARNING <SLOT 2>]		An error has occurred in one of the SD card during simultaneous recording.	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>Recording to the other SD card will continue.</li> </ul>
[SIMUL REC WARNING <SLOT 1>]/[SIMUL REC WARNING <SLOT 2>]		It has tried to record exceeding the maximum number of clips to one of the SD card during simultaneous recording.	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>Recording to the other SD card will continue.</li> <li>When [DIAGNOSTICS] is selected in the INFO screen, [SIMUL REC WARNING] [&lt;OVER MAX NUM. OF CLIPS&gt;] is displayed in the warning display area.</li> <li>Replace the SD card or delete unnecessary clips.</li> </ul>
[FAN STOPPED]		The fan has stopped.	A message is displayed. <ul style="list-style-type: none"> <li>The current operation will continue.</li> <li>Stop the use immediately when the fan has stopped, and consult the dealer.</li> <li>If the fan has stopped, temperature of the camera will rise. Therefore, do not use the camera for a long period of time.</li> </ul>
[CHECK CARD <SLOT 1>]/[CHECK CARD <SLOT 2>]		The card cannot be recognized properly because a recording medium which is not supported has been inserted or there is dirt on the terminal of the card.	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>Check the card that is inserted.</li> <li>If it is displayed when the SD card is inserted, reinsert the SD card.</li> </ul>
[FORMAT ERROR CARD <SLOT 1>]/[FORMAT ERROR CARD <SLOT 2>]		The SD card with management information that is out of specification is inserted. (Include when the system frequency (59.94 Hz system or 50 Hz system) for the AVCHD format in the SD card is different from the setting in the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY])	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>Insert an SD card that can be recorded.</li> <li>The system frequency information for the AVCHD format is confirmed at the time of formatting or at the first recording.</li> </ul>
[NOT SDXC CARD <SLOT 1>]/[NOT SDXC CARD <SLOT 2>]		The SDHC memory card that cannot record the MOV format data is inserted when [MAIN CODEC] is set to MOV format.	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>Insert an SDXC memory card.</li> </ul>
[INCOMPATIBLE CARD <SLOT 1>]/[INCOMPATIBLE CARD <SLOT 2>]		The SD card that may not be able to record due to slow writing speed is inserted.	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>The current operation will continue.</li> <li>Use an SD card with sufficient writing speed.</li> </ul>
[BACKUP BATT EMPTY]		Voltage lowering of the backup battery for internal clock was detected when the power is set to <   > (ON).	A message is displayed for approximately five seconds. <ul style="list-style-type: none"> <li>The current operation will continue.</li> <li>Set the date/time again after charging the built-in battery.</li> </ul>

Message

Screen display		Description	Behavior and cause
VIEW screen	HOME screen		
[CANNOT PLAY.]	—	This is a clip that cannot be played back. (When it cannot be played back due to difference of the system frequency, etc.) An error has occurred during playback, and the playback has stopped.	A message is displayed. • Confirm if the system frequency of the clip is the same as the system frequency of the camera. • Check the clip.
[CANNOT DELETE.]	—	This is a clip that cannot be deleted.	A message is displayed. • Match the device and content versions.
[CANNOT RECORD. THE NUMBER OF CLIPS HAS EXCEEDED THE MAXIMUM LIMIT.]	—	The number of clips that can be recorded has reached the maximum.	A message is displayed. • Replace the SD card or delete unnecessary clips.
[CARD ERROR. PLEASE REFORMAT.]	—	Formatting of the SD card has failed.	A message is displayed. • Format it again.
[Repair failed.]	—	Repairing of the clip that an error has occurred has failed due to disconnection of the power or removing of the SD card during recording. Restoring of the management information has failed.	A message is displayed. • Check the SD card.
[UNABLE TO FORMAT.]	—	This is an SD card that cannot be formatted.	A message is displayed. • Check the SD card.
[CANNOT REPAIR CONTROL INFORMATION DUE TO LOW BATTERY POWER.]	—	Management information cannot be restored due to insufficient remaining battery capacity.	A message is displayed. • Replace with a fully charged battery, or connect the AC adaptor.
[CANNOT PROTECT.]	—	This is a clip that cannot be protected.	A message is displayed. • Match the device and content versions.
[THE CLIP IS PROTECTED. PLEASE CANCEL PROTECTION.]	—	The clip is protected so it cannot be deleted.	A message is displayed. • Cancel the protect on the clip.
[CANNOT DELETE UNTIL TOP MENU IS DELETED. DELETE TOP MENU? (RECORDED DATA WILL NOT BE DELETED)]	—	It is trying to delete a clip on the SD card where the top menu is created.	A message is displayed. • Delete the top menu.
[CANNOT RECORD UNTIL TOP MENU IS DELETED. DELETE TOP MENU? (RECORDED DATA WILL NOT BE DELETED)]	—	The SD card with top menu created is inserted.	A message is displayed. • Delete the top menu.
[THUMBNAIL DATA ERROR IS DETECTED.]	—	An error occurred in the thumbnail information of the SD card.	A message is displayed. • Restoring of the management information is performed automatically after this.
[CANNOT RECORD - INCOMPATIBLE CONTROL DATA.]	—	Version of the management information of the SD card is not supported.	A message is displayed. • Match the device and content versions.
[CANNOT SET.]	—	This cannot be set.	A message is displayed. • Perform the setting after making it possible to set.
[THIS CLIP CANNOT BE COPIED.]	—	The clip cannot be copied.	A message is displayed. • Copy the clips other than the corresponding clip.
[CONTROL DATA ERROR HAS BEEN DETECTED. (SD CARD)]	—	An error occurred in the management information of the SD card.	A message is displayed. • Restoring of the management information is performed automatically after this.
[COPY FAILED. PLEASE CHECK THE CARD.]	—	Copying of the clip has failed due to an error in the SD card.	A message is displayed. • Check the SD card.
[COPY TERMINATION IN PROGRESS DUE TO INSUFFICIENT BATTERY POWER. DO NOT SWITCH OFF.]	—	Remaining battery capacity became low while copying the clip.	A message is displayed. • The copy is cancelled. • Replace with a fully charged battery, or connect the AC adaptor.
[COPY TERMINATED DUE TO INSUFFICIENT BATTERY POWER.]	—	Copying of a clip is cancelled due to insufficient remaining battery capacity.	A message is displayed. • Replace with a fully charged battery, or connect the AC adaptor.
[CANNOT COPY - THE NUMBER OF CLIPS HAS REACHED MAXIMUM.]	—	The number of clips that can be copied has reached the maximum.	A message is displayed. • Replace the SD card or delete unnecessary clips in the copy destination.
[LOW BATTERY. PLEASE CONNECT AC ADAPTOR OR CHANGE BATTERY.]	—	It is trying to copy a clip or update the camera firmware while the remaining battery capacity is insufficient.	A message is displayed. • Replace with a fully charged battery, or connect the AC adaptor.
[CANNOT PLAY THIS CLIP ON THIS MODEL.]	—	This is a clip that cannot be played back with the camera.	A message is displayed. • Playback on a device that can playback.
[Cannot copy: contains recordings from other devices.]	—	The clip recorded in other device cannot be copied.	A message is displayed. • Copy the clips other than the corresponding clip.

Chapter 9 Notes — Warning system

Screen display		Description	Behavior and cause
VIEW screen	HOME screen		
[ERROR HAS OCCURRED. TO REPAIR THE CONTROL DATA, PLEASE CONNECT AC ADAPTOR OR CHANGE BATTERY.]	—	The remaining battery capacity was low when the restoring of the management information is started.	A message is displayed. • Replace with a fully charged battery, or connect the AC adaptor.
[INVALID]	—	Operation is disabled.	A message is displayed. • Operate after the the operation becomes enabled.
[Cannot record - Playlist capacity is full.]	—	It has tried to record on the SD card which the number of playlist that can be recorded has reached the maximum.	A message is displayed. • Replace the SD card or delete unnecessary clips.
[Cannot copy - Playlist capacity is full.]	—	It has tried to copied to the SD card which the number of playlist that can be recorded has reached the maximum.	A message is displayed. • Replace the SD card or delete unnecessary clips.
[Exceeds capacity. Please reselect.]	—	The remaining recordable capacity of the copy destination SD card is insufficient.	A message is displayed. • Reselect the clip to copy, or secure sufficient remaining recordable capacity in the copy destination SD card.
[Check the destination media.]	—	An error has occurred in the copy destination SD card while copying.	A message is displayed. • Confirm the copy destination SD card.
[NO SCENE FILE.]	—	There is no scene file in the read source SD card.	A message is displayed. • Insert an SD card that has a scene file.
[SCENE FILE LOAD FAILED]	—	Reading of the scene file has failed.	A message is displayed. • Check the SD card.
[SCENE FILE WRITE FAILED]	—	Writing of the scene file has failed.	A message is displayed. • Check the SD card.
[DISCONNECT USB CABLE.]	—	Due to an OS non-compatible error, five minutes has elapsed until the USB service mode connection is established.	A message is displayed. • Confirm if the OS in use is supported by the camera.
[CARD LOCKED.]	—	It has tried to protect or delete a clip in the locked SD card. It has tried to copy a clip to the locked SD card.	A message is displayed. • Unlock the SD card.
[CANNOT SELECT MORE CLIPS.]	—	It has tried to select more than 99 clips.	A message is displayed. • Execute the process such as copying by every 99 clips.
[SELECT THE CLIP TO BE DELETED.]	—	It has tried to delete a clip without choosing any.	A message is displayed. • Select a clip to be deleted.
[SELECT THE CLIPS TO COPY.]	—	It has tried to copy a clip without choosing any.	A message is displayed. • Select a clip to be copied.
[Insert a card in slot 1.]	—	It has tried to copy without inserting the SD card into the card slot 1.	A message is displayed. • Insert an SD card into the card slot 1.
[Insert a card in slot 2.]	—	It has tried to copy without inserting the SD card into the card slot 2.	A message is displayed. • Insert an SD card into the card slot 2.
[CHECK CARD.]	—	It has tried to copy to an error card.	A message is displayed. • Check the SD card.
[CANNOT COPY.]	—	It has tried to copy a content recorded in a AVCHD format with a different system frequency (59.94 Hz system or 50 Hz system) between the copy source SD card the copy destination SD card.	A message is displayed. • Set the system frequency (59.94 Hz system or 50 Hz system) for the contents in the copy source SD card and the copy destination SD card to be the same. • The system frequency information for the AVCHD format is confirmed at the time of formatting or at the first recording.
[CANNOT RECORD.]	—	Cannot be recorded.	A message is displayed. • Perform recording after making it possible.

## Recording function that cannot be used simultaneously

Depending on the recording function that is set, there are recording functions that cannot be used simultaneously.

• Meaning of the symbols used in the table are as follows.

- ✓: Can be used simultaneously.
- —: Cannot be used simultaneously.

Recording function to additionally set	Recording function that is set				
	Pre-recording <sup>*1*2*3</sup>	Relay recording <sup>*3</sup>	Simultaneous recording <sup>*3</sup>	Interval recording <sup>*3*4*5*6*7*8</sup>	VFR <sup>*4*5*6</sup>
Pre-recording <sup>*1*2*3</sup>	—	✓	✓	—	—
Relay recording <sup>*3</sup>	✓	—	—	—	✓ <sup>*9</sup>
Simultaneous recording <sup>*3</sup>	✓	—	—	✓	✓ <sup>*9</sup>
Interval recording <sup>*3*4*5*6*7*8</sup>	—	—	✓	—	—
VFR <sup>*4*5*6</sup>	—	✓ <sup>*9</sup>	✓ <sup>*9</sup>	—	—

\*1 Time code is fixed to free run.

\*2 The pre-recording is cancelled once when three hours has passed without starting the recording.

\*3 When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SDI RAW] is set to anything other than [OFF], this cannot be set.

\*4 Cannot set simultaneously in the following cases.

- When recording in AVCHD format

\*5 Time code is fixed to recording run.

\*6 When the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [FREQUENCY] is set to [50.00i]/[59.94i], this cannot be set.

\*7 The time code is fixed to [NDF].

\*8 The [OUTPUT SETTINGS] menu → [SDI OUT] → [SDI REC REMOTE] and the [OUTPUT SETTINGS] menu → [HDMI OUT] → [HDMI REC REMOTE] will not operate.

\*9 The function will not operate if the [SYSTEM SETTINGS] menu → [SYSTEM MODE] → [SENSOR MODE] is set to [S35 MIX 2.8K] or [4/3 CROP&MIX 2.2K].

## Updating the camera firmware

---

Confirm the firmware version of the camera in the [SYSTEM SETTINGS] menu → [INFORMATION] → [VERSION], and access the most current information regarding firmware in the website described in NOTE, and download the firmware if required.

### NOTE

---

- Update is completed by loading the downloaded file to the camera via the SD card. Insert the SD card that stores the update file into the card slot 1, and select the [SYSTEM SETTINGS] menu → [INFORMATION] → [UPDATE]. For update method, refer to the support desk at the following website: <https://pro-av.panasonic.net/>
- Always perform update of the firmware with the LCD monitor unit mounted.
- When updating the firmware, use the AC adaptor or sufficiently charged battery.
- Do not turn off the power while updating the firmware. Rewriting of the firmware may fail and the camera may not be activated.

## Cleaning and storing

### Cleaning the camera body

- Remove the battery or disconnect the AC cable from the power outlet before cleaning.
- Do not use benzine or thinner to clean the camera. Using benzine or thinner may cause deformation or peeling off of the paint of the camera body.
- Wipe the camera body with a soft and clean cloth. If there is heavy dirt attached, wipe the camera recorder using a cloth soaked in kitchen detergent diluted with water, and then wipe it with a dry cloth.

### Cautions when storing the camera recorder

Remove the battery from the camera when storing. Store them in a place where humidity is low and temperature is relatively constant.

- Recommended temperature: 15 °C to 25 °C
- Recommended relative humidity: 40% to 60%

#### ■ Camera

- Wrap the camera recorder with a soft cloth so that dust does not get into it.

#### ■ Battery

- The battery life shortens where the temperature is extremely high or low.
- Storing in a place where there is heavy oil smoke or dust may lead to malfunctions due to rust on terminal connectors, etc.
- Do not let the battery terminal contact a metal object (such as a necklace or hairpin). Short circuit may occur between terminals and it may lead to heat generation. Touching on a heated part may cause severe burns.
- Store the battery with electrically discharged. When storing for a long period of time, it is recommended to charge the battery once a year, and then use up the battery capacity by the camera before storing it again.

#### ■ SD card

- If you remove it from the camera recorder, be sure to put it in its case.
- Do not place it in a place where there is corrosive gas.
- Do not place it in a place where temperature gets high, such as in a car or under direct sunlight.
- Do not place it in a high humid or dusty place.

## Chapter 10 **Specification**

---

This chapter describes the specifications of this product.

## Dimensions

# Specifications

## General

Power  
 DC  $\equiv$  7.28 V (when battery is used)  
 DC  $\equiv$  12 V (when the AC adaptor is used)  
 Power consumption  
 19 W (when LCD monitor is used)

indicates safety information.

Operating ambient temperature	0 °C - 40 °C
Operating ambient humidity	10% - 80% (relative humidity, no condensation)
Mass	Approx. 1.2 kg (camera body only, excluding the accessories) Approx. 2.05 kg (including accessories of handle, grip, LCD monitor, LCD monitor hood, microphone holder, microphone holder adaptor, and battery)
Dimensions (W×H×D)	Camera body only 135 mm×133 mm×170 mm (excluding protrusion)

## Camera unit

Pickup device	Super 35 mm, MOS sensor
Number of pixels	<ul style="list-style-type: none"> <li>Total pixels: Approx. 20.49 million pixels (6340 (H) × 3232 (V))</li> <li>Valid pixels: Approx. 17.52 million pixels (5720 (H) × 3016 (V))</li> </ul>
Lens mount	EF mount
Optical filter	<ul style="list-style-type: none"> <li>Built-in ND filter, electrical            [ND:1.8]/[ND:1.2]/[ND:0.6]/[ND:CLR]</li> <li>IR cut filter            [ON]/[OFF] by assigning [IR SHOOTING] to the USER button (switched by menu)</li> </ul>
Color temperature setting	ATW, AWB, 2000 K - 15000 K, -10.0GMg - +10.0GMg Maximum of 12 items can be registered
Gain setting	<ul style="list-style-type: none"> <li>[ISO] mode            Dual native ISO compatible, [200 ISO] to [25600 ISO]</li> <li>[dB] mode            [NORMAL]/[HIGH] gain compatible, -12 dB to 26 dB (2 dB steps)</li> </ul>
Shutter speed	<ul style="list-style-type: none"> <li>When set to [deg]            3.0 deg - 357.0 deg (0.5 deg steps)            Maximum of 12 items can be registered</li> <li>When set to [sec]            1/24.1 seconds to 1/8000 seconds (for 23.98p)            Maximum of 12 items can be registered</li> </ul>

## Memory card recorder

Recording media	<ul style="list-style-type: none"> <li>Card slot × 2</li> <li>SDHC memory card (4 GB - 32 GB)</li> <li>SDXC memory card (exceeding 32 GB - 128 GB)</li> <li>: UHS-I/UHS-II, UHS Speed Class 3 compatible, video Speed Class V90 compatible</li> </ul>
Number of recording pixels	4096×2160 (4K), 3840×2160 (UHD), 2048×1080 (2K), 1920×1080 (FHD), 1280×720 (HD)
Recording codec	MOV, AVCHD
System frequency	59.94p, 59.94i, 50p, 50i, 29.97p, 24p, 25p, 23.98p
Recording frame rate (max)	<ul style="list-style-type: none"> <li>4K/UHD            59.94fps or 50fps</li> <li>2K/HD            120fps/100fps            240fps/200fps (crop mode)</li> </ul>
Recording format	<ul style="list-style-type: none"> <li>MOV: 4:2:0 (8 bits)            420LongGOP 150M/420LongGOP 100M/420LongGOP 50M</li> <li>MOV: 4:2:2 (10 bits)            422LongGOP 150M/422LongGOP 100M/422LongGOP 50M            422ALL-I 400M/422ALL-I 200M/422ALL-I 100M</li> <li>AVCHD:            PS/PH/HA/PM</li> </ul>
Recording video signal	4096×2160/59.94p, 50p, 29.97p, 25p, 24p, 23.98p 3840×2160/59.94p, 50p, 29.97p, 25p, 23.98p 2048×1080/59.94p, 50p, 29.97p, 25p, 24p, 23.98p 1920×1080/59.94p, 50p, 29.97p, 25p, 23.98p, 59.94i, 50i 1280×720/59.94p, 50p

## Chapter 10 Specification — Specifications

Recording and playback time	When using a 64 GB SDXC memory card <ul style="list-style-type: none"> <li>• 4096×2160/422ALL-I 400M/29.97p, 25p, 23.98p, 24p Approx. 20 minutes</li> <li>• 2048×1080/422ALL-I 200M/59.94p, 50p Approx. 40 minutes</li> <li>• 4096×2160/420LongGOP 150M/59.94p, 50p Approx. 55 minutes</li> <li>• 2048×1080/420LongGOP 100M/59.94p, 50p Approx. 1 hour 20 minutes</li> <li>• 1920×1080/420LongGOP 50M/29.97p, 25p, 23.98p Approx. 2 hours 40 minutes</li> </ul>
Two-slot function	Simultaneous recording, relay recording
Special recording	Pre-recording, interval recording

### Digital video

Number of quantizing bits	<ul style="list-style-type: none"> <li>• MOV: 4:2:2 (10 bits)/4:2:0 (8 bits)</li> <li>• AVCHD: 4:2:0 (8 bits)</li> </ul>
Video compression format	H.264/MPEG-4 AVC High Profile

### Digital audio

Recording audio signal	<ul style="list-style-type: none"> <li>• MOV: 48 kHz/24 bits, 2ch</li> <li>• AVCHD: 48 kHz/16 bits, 2ch</li> </ul>
Audio recording format	<ul style="list-style-type: none"> <li>• MOV: LPCM</li> <li>• AVCHD: Dolby Audio™</li> </ul>
Headroom	18 dB/20 dB switchable by menu

### Video output

<SDI OUT> terminal	<ul style="list-style-type: none"> <li>• BNC×1 4K (6G), HD (3G/1.5G): 0.8 V [p-p], 75 Ω</li> <li>• SDI remote control support</li> <li>• Output format (4:2:2 (10 bits) output) 4096×2160/3840×2160: 29.97p, 25p, 24p, 23.98p 1920×1080: 59.94p, 50p, 59.94i, 50i, 29.97p, 29.97fps, 25p, 25fps, 24p, 24fps, 23.98p, 23.98fps 1280×720: 59.94p, 50p</li> <li>• RAW output format (10 bits) 5760×3072: 29.97p, 25p, 24p, 23.98p (maximum 30fps/25fps) 4096×2160: 59.94p, 50p, 29.97p, 25p, 24p, 23.98p (maximum 60fps/50fps) 2048×1080: 59.94p, 50p, 29.97p, 25p, 24p, 23.98p (maximum 240fps/200fps)</li> </ul>
<HDMI> terminal	<ul style="list-style-type: none"> <li>• HDMI type A × 1 (VIERA Link not compatible)</li> <li>• HDMI remote control support</li> <li>• Output format (4:2:2 (10 bits) output) 4096×2160/3840×2160: 59.94p, 50p, 29.97p, 25p, 24p, 23.98p 1920×1080: 59.94p, 50p, 59.94i, 50i, 29.97p, 25p, 24p, 23.98p 1280×720: 59.94p, 50p 720×480: 59.94p 720×576: 50p</li> </ul>

### Audio input

Built-in microphone	Supports stereo microphone
<AUDIO INPUT 1>/<AUDIO INPUT 2> terminal	XLR×2, 3-pin Input high impedance, [LINE]/[MIC] switch by menu <ul style="list-style-type: none"> <li>• [LINE]: 4 dBu/0 dBu (selectable menu)</li> <li>• [MIC]: -40 dBu/-50 dBu/-60 dBu (selectable menu), +48 V ON/OFF (switch by menu)</li> </ul>

## Audio output

<SDI OUT> terminal <HDMI> terminal	LPCM 2ch
Headphone terminal	Stereo mini jack × 1
Speaker	20 mm diameter, round ×1

## Other input/output

<TC IN/OUT> terminal	BNC×1 Used as input/output terminal, input/output switch by menu <ul style="list-style-type: none"> <li>• Input: 1.0 V - 4.0 V [p-p], 10 kΩ</li> <li>• Output: 2.0 V±0.5 V [p-p], low impedance</li> </ul>
<LCD> terminal	40-pin (for connecting LCD monitor)
<REMOTE> terminal	2.5 mm diameter super mini jack × 1, for connecting grip
<USB2.0 HOST> terminal	Type A connector, 4-pin (5 V, 0.5 A), for attaching the wireless module (optional)
<DC IN 12V> terminal	DC12 V, EIAJ type 4

## Monitor

LCD monitor	3.5-type LCD monitor (Approx. 1.15 million dots), touch panel support Can be changed to mirror shooting display with the <MIRROR> switch
-------------	--

## AC adaptor

### Power source

AC  $\sim$  100 V - 240 V, 50 Hz/60 Hz, 1.2 A

### Power output

DC  $\equiv$  12 V, 3.0 A

indicates safety information.

Operating ambient temperature	0 °C - 40 °C
Operating ambient humidity	10% - 90% (relative humidity, no condensation)
Mass	Approx. 225 g
Dimensions (W×H×D)	115 mm×37 mm×57 mm (excluding the DC cable section)

Inrush current, measured according to European standard EN55103-1: 4.85 A

## Battery charger (AG-BRD50)

### Input voltage

DC  $\equiv$  12 V, 3.0 A

### Output voltage

DC  $\equiv$  8.4 V, 4.0 A

indicates safety information.

Charging current	Maximum 4,000 mA
Operating ambient humidity	10% - 80% (relative humidity, no condensation)
Mass	Approx. 230 g
Dimensions (W×H×D)	130 mm×48 mm×107 mm

Inrush current, measured according to European standard EN55103-1: 5 A

## Battery pack (AG-VBR59)

### Voltage/capacity

DC  $\equiv$  7.28 V/5900 mAh 43 Wh

indicates safety information.

**Disposal of Old Equipment and Batteries**  
**Only for European Union and countries with recycling systems**

These symbols on the products, packaging, and/or accompanying documents mean that used electrical and electronic products and batteries must not be mixed with general household waste.  
For proper treatment, recovery and recycling of old products and used batteries, please take them to applicable collection points in accordance with your national legislation.

By disposing of them correctly, you will help to save valuable resources and prevent any potential negative effects on human health and the environment.

For more information about collection and recycling, please contact your local municipality, dealer or supplier.

EU

Penalties may be applicable for incorrect disposal of this waste, in accordance with national legislation.

**Note for the battery symbol (bottom symbol):**

This symbol might be used in combination with a chemical symbol. In this case it complies with the requirement set by the Directive for the chemical involved.
